Phaeodaria. — Rohrstrahllinge.

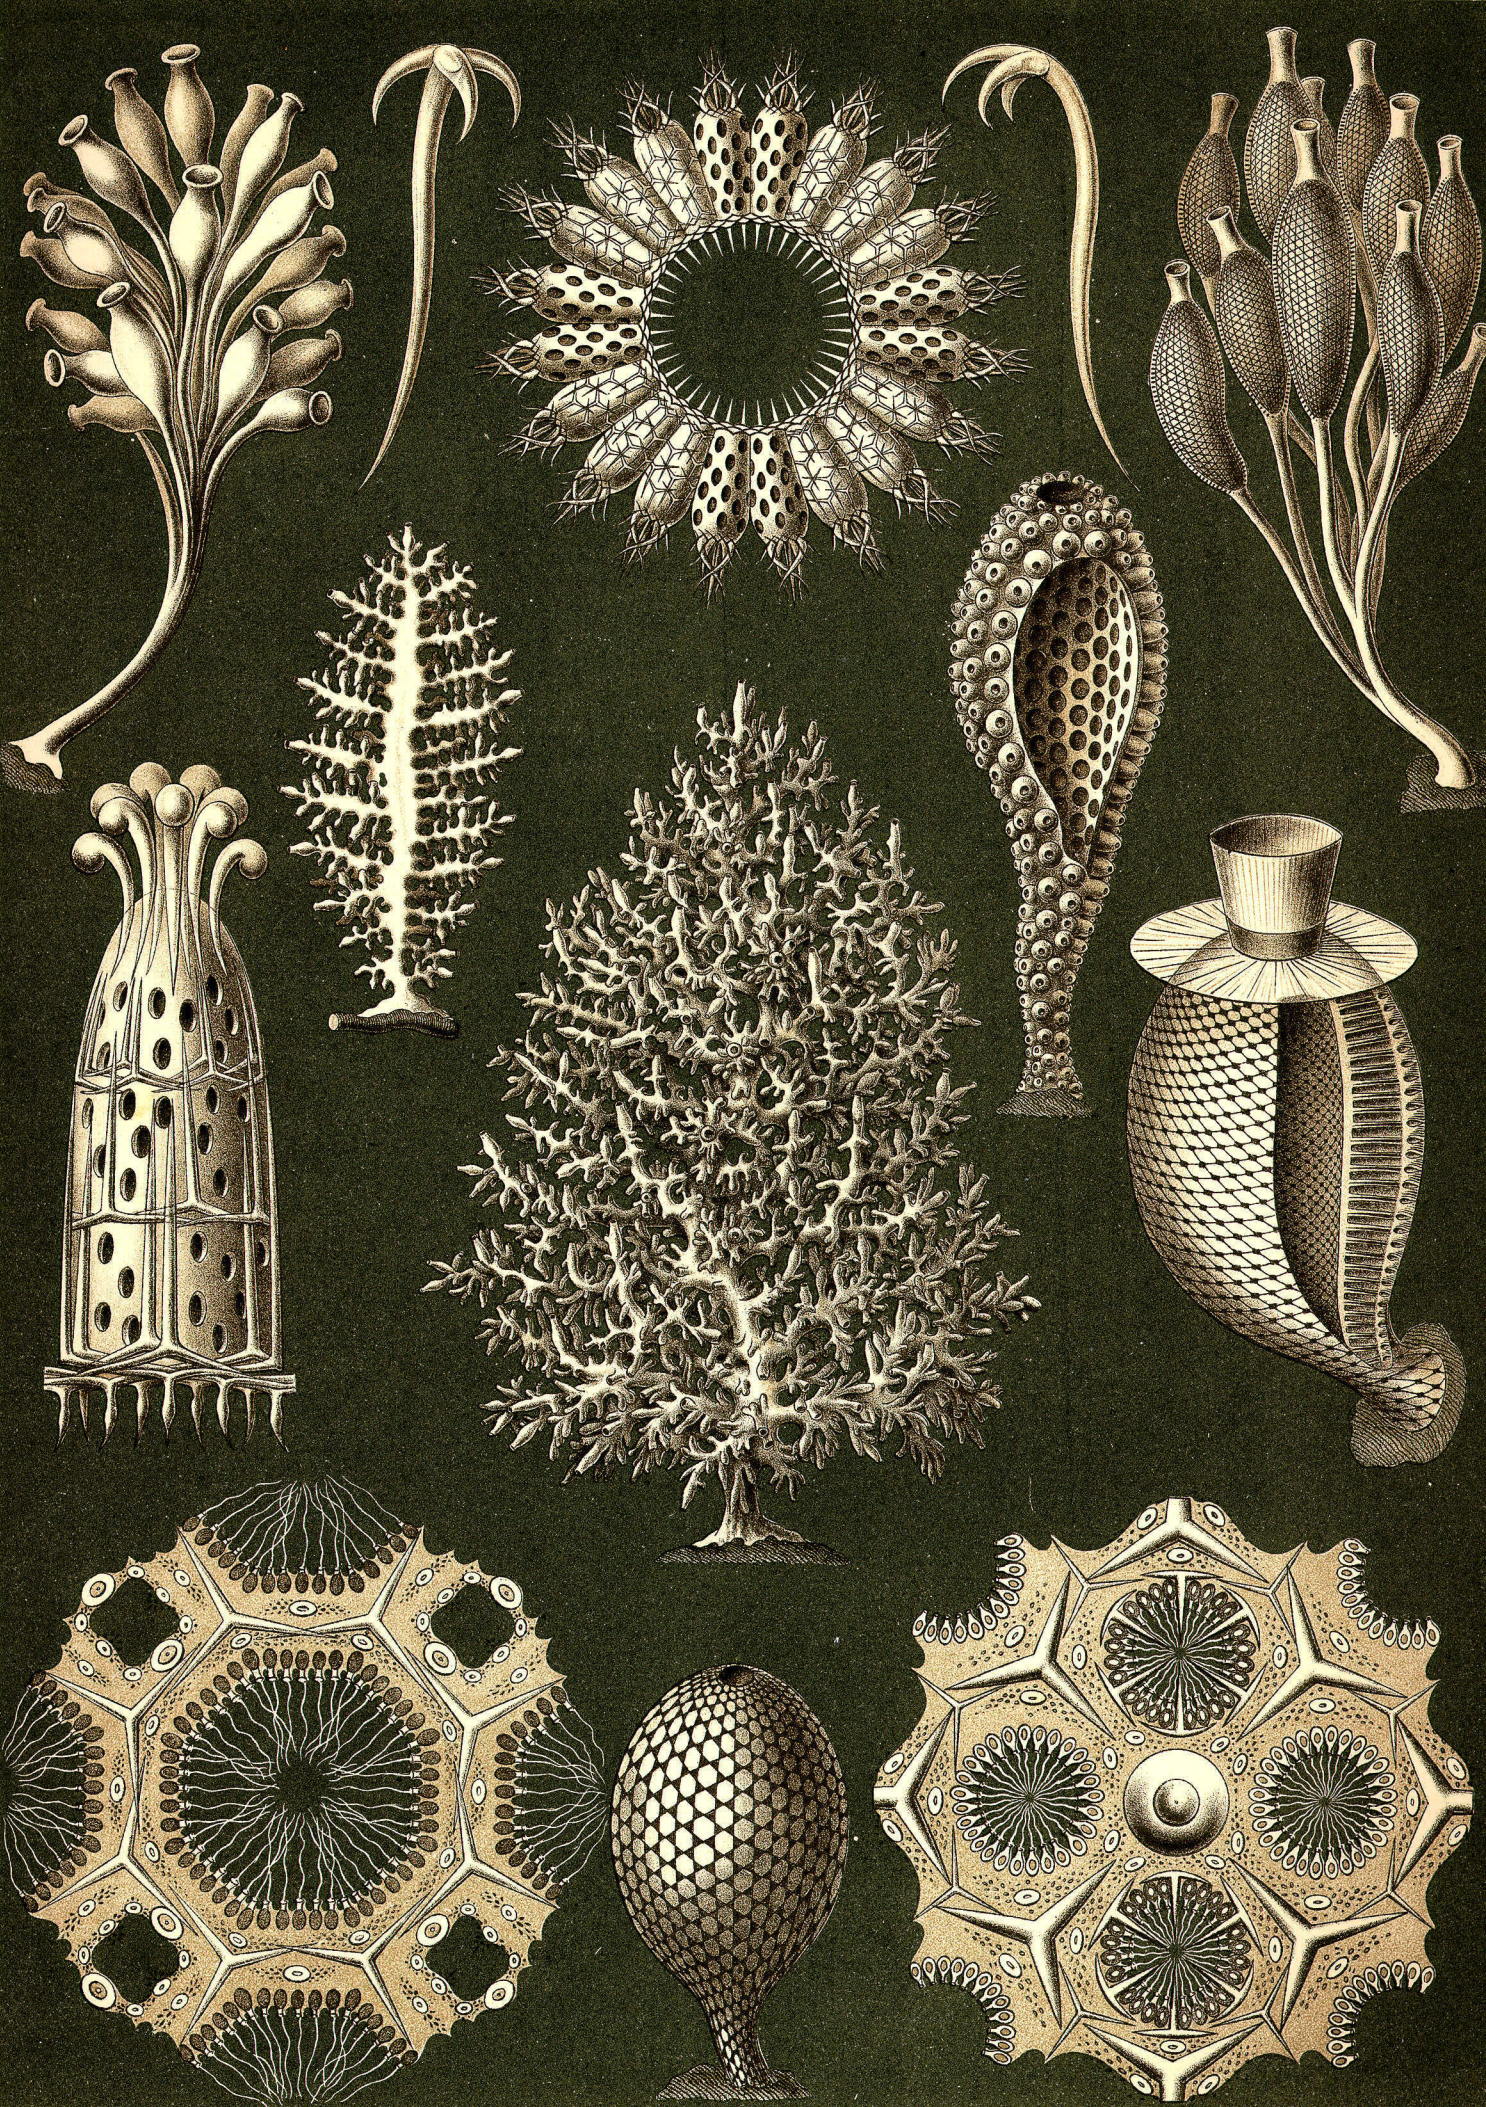

Thalamophora. — Kammerlinge.

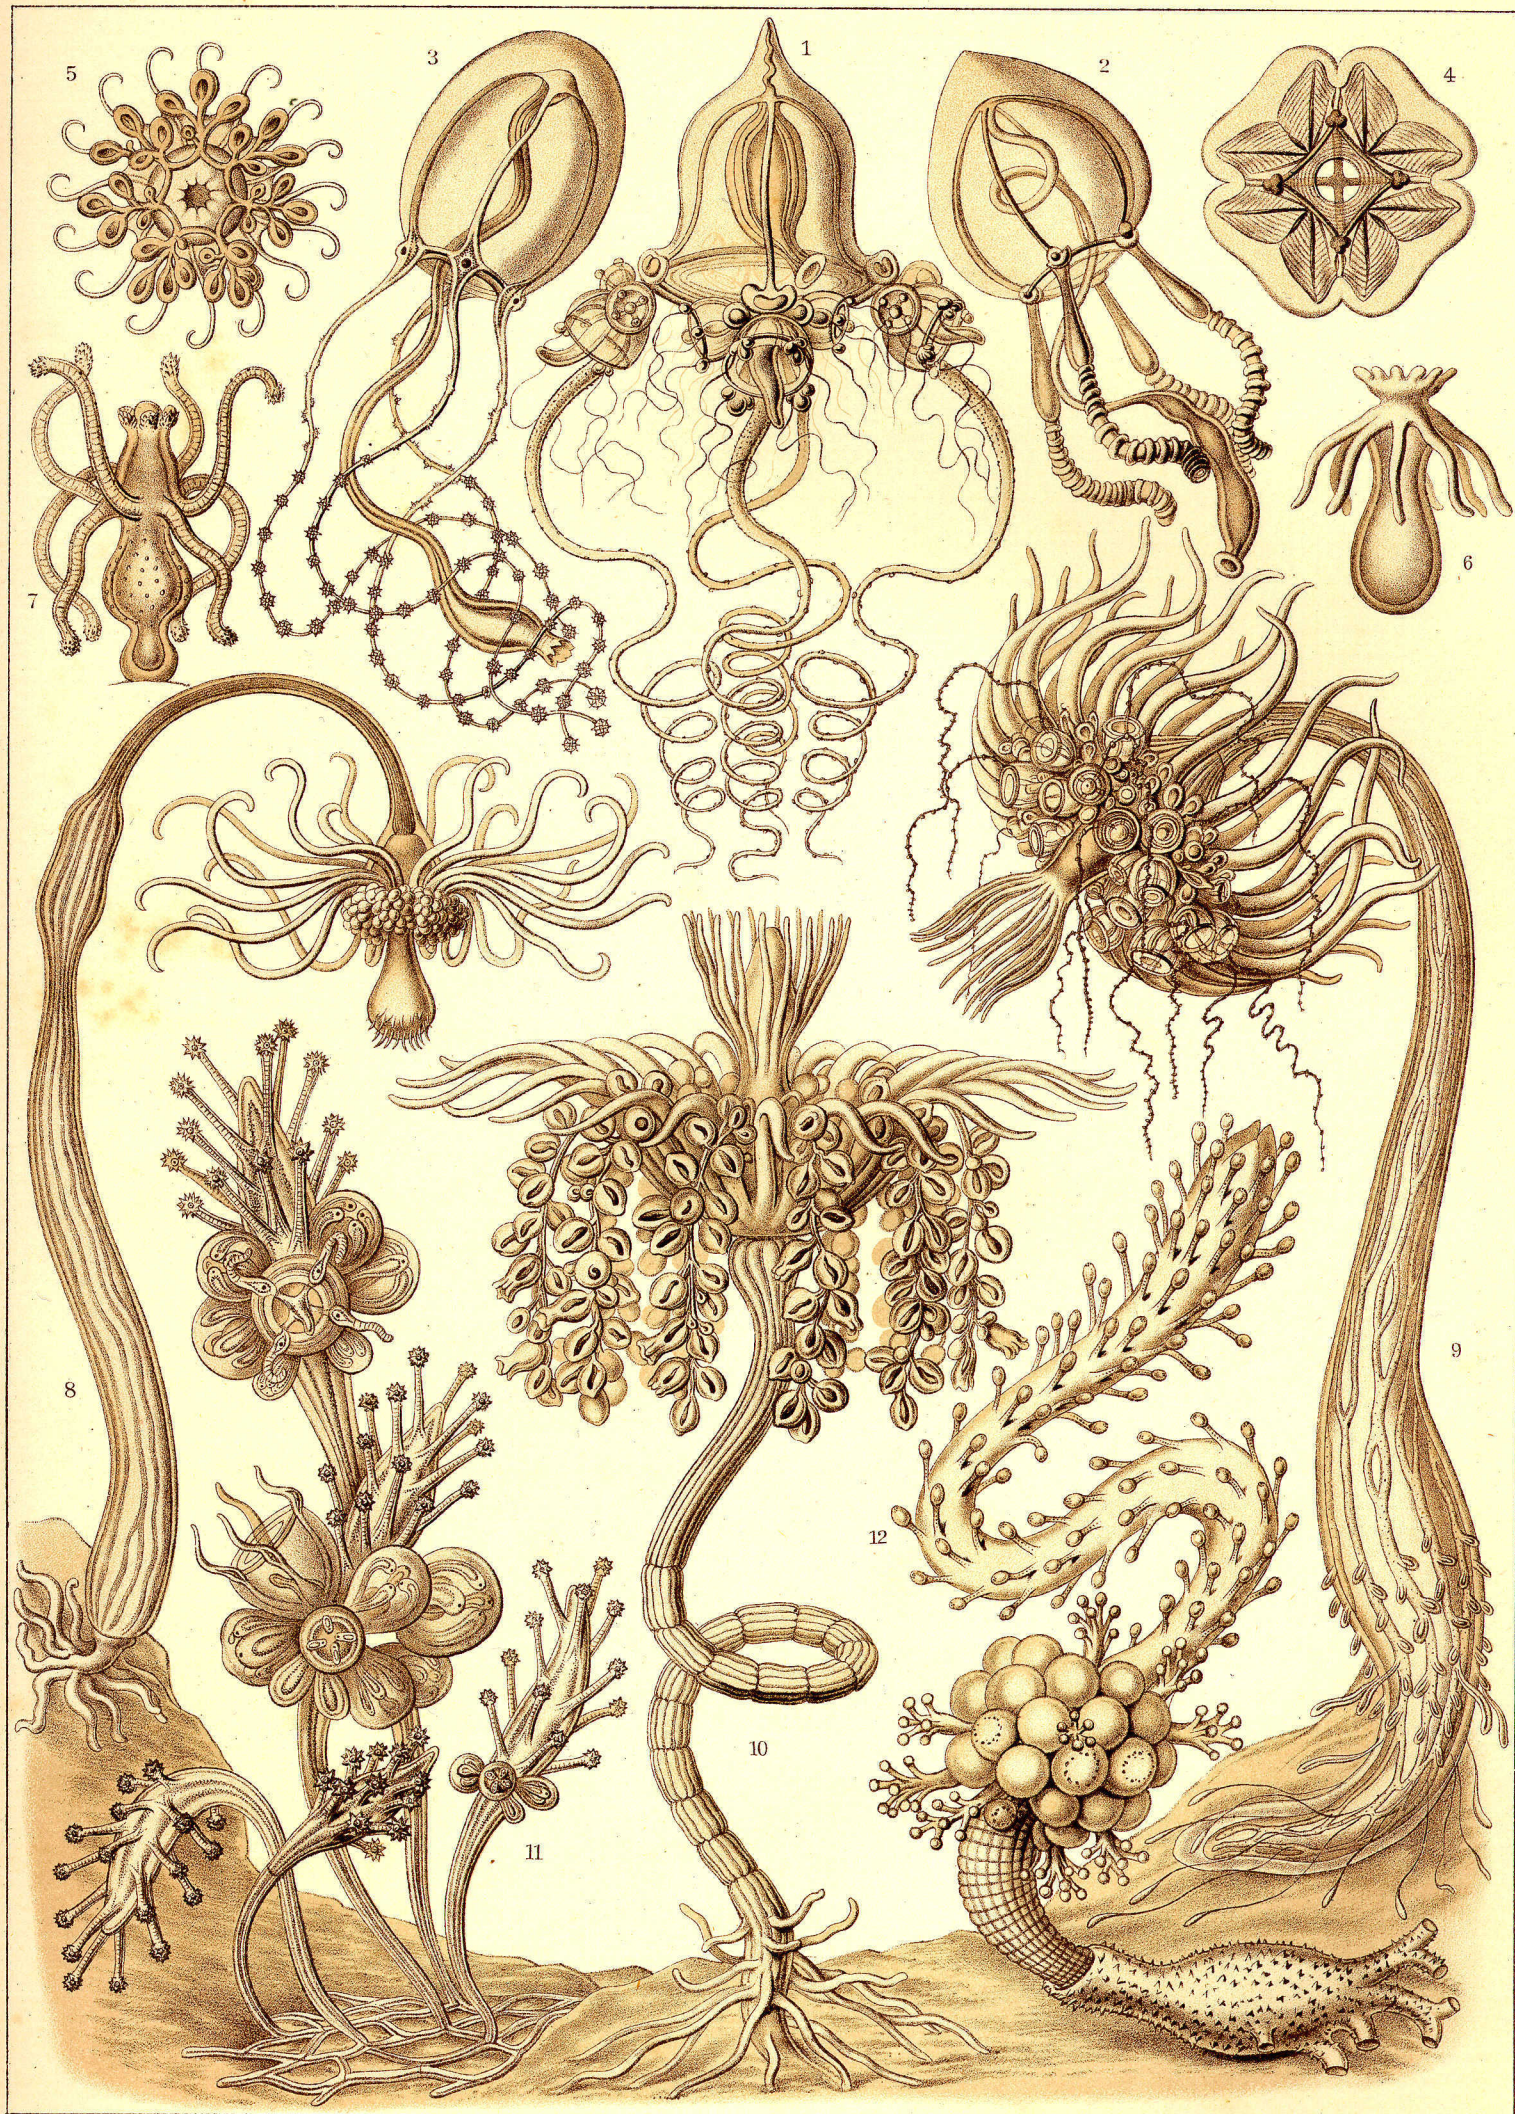

Ciliata. — Wimperlinge.

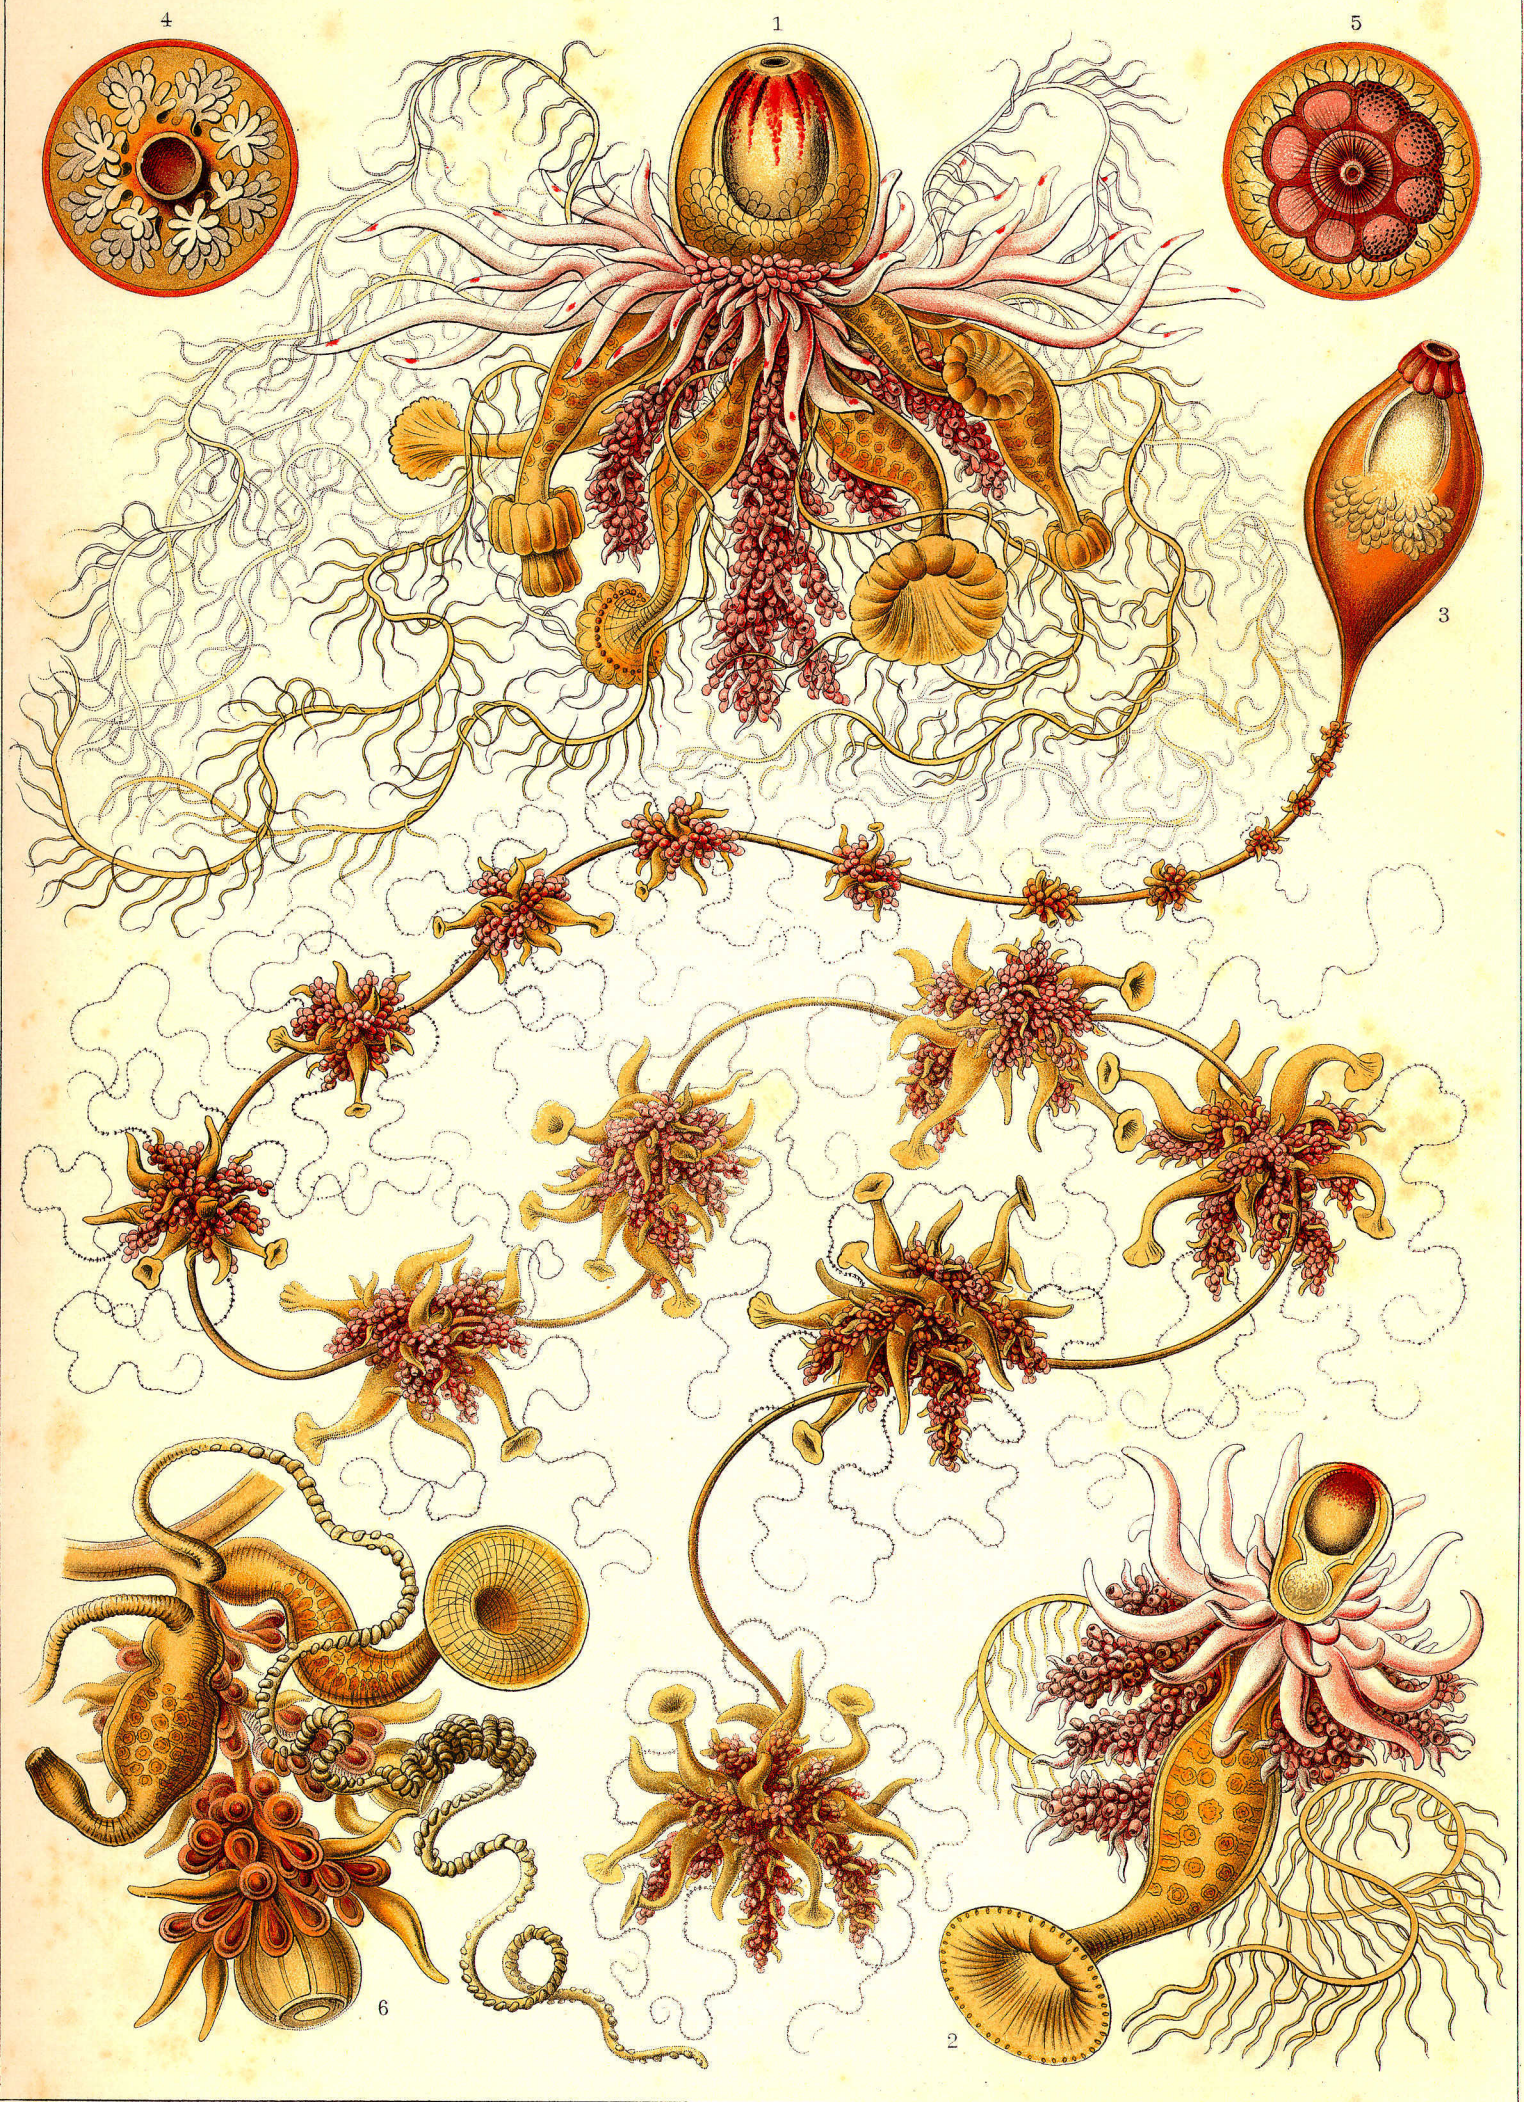

Diatomea. — Schachtellinge.

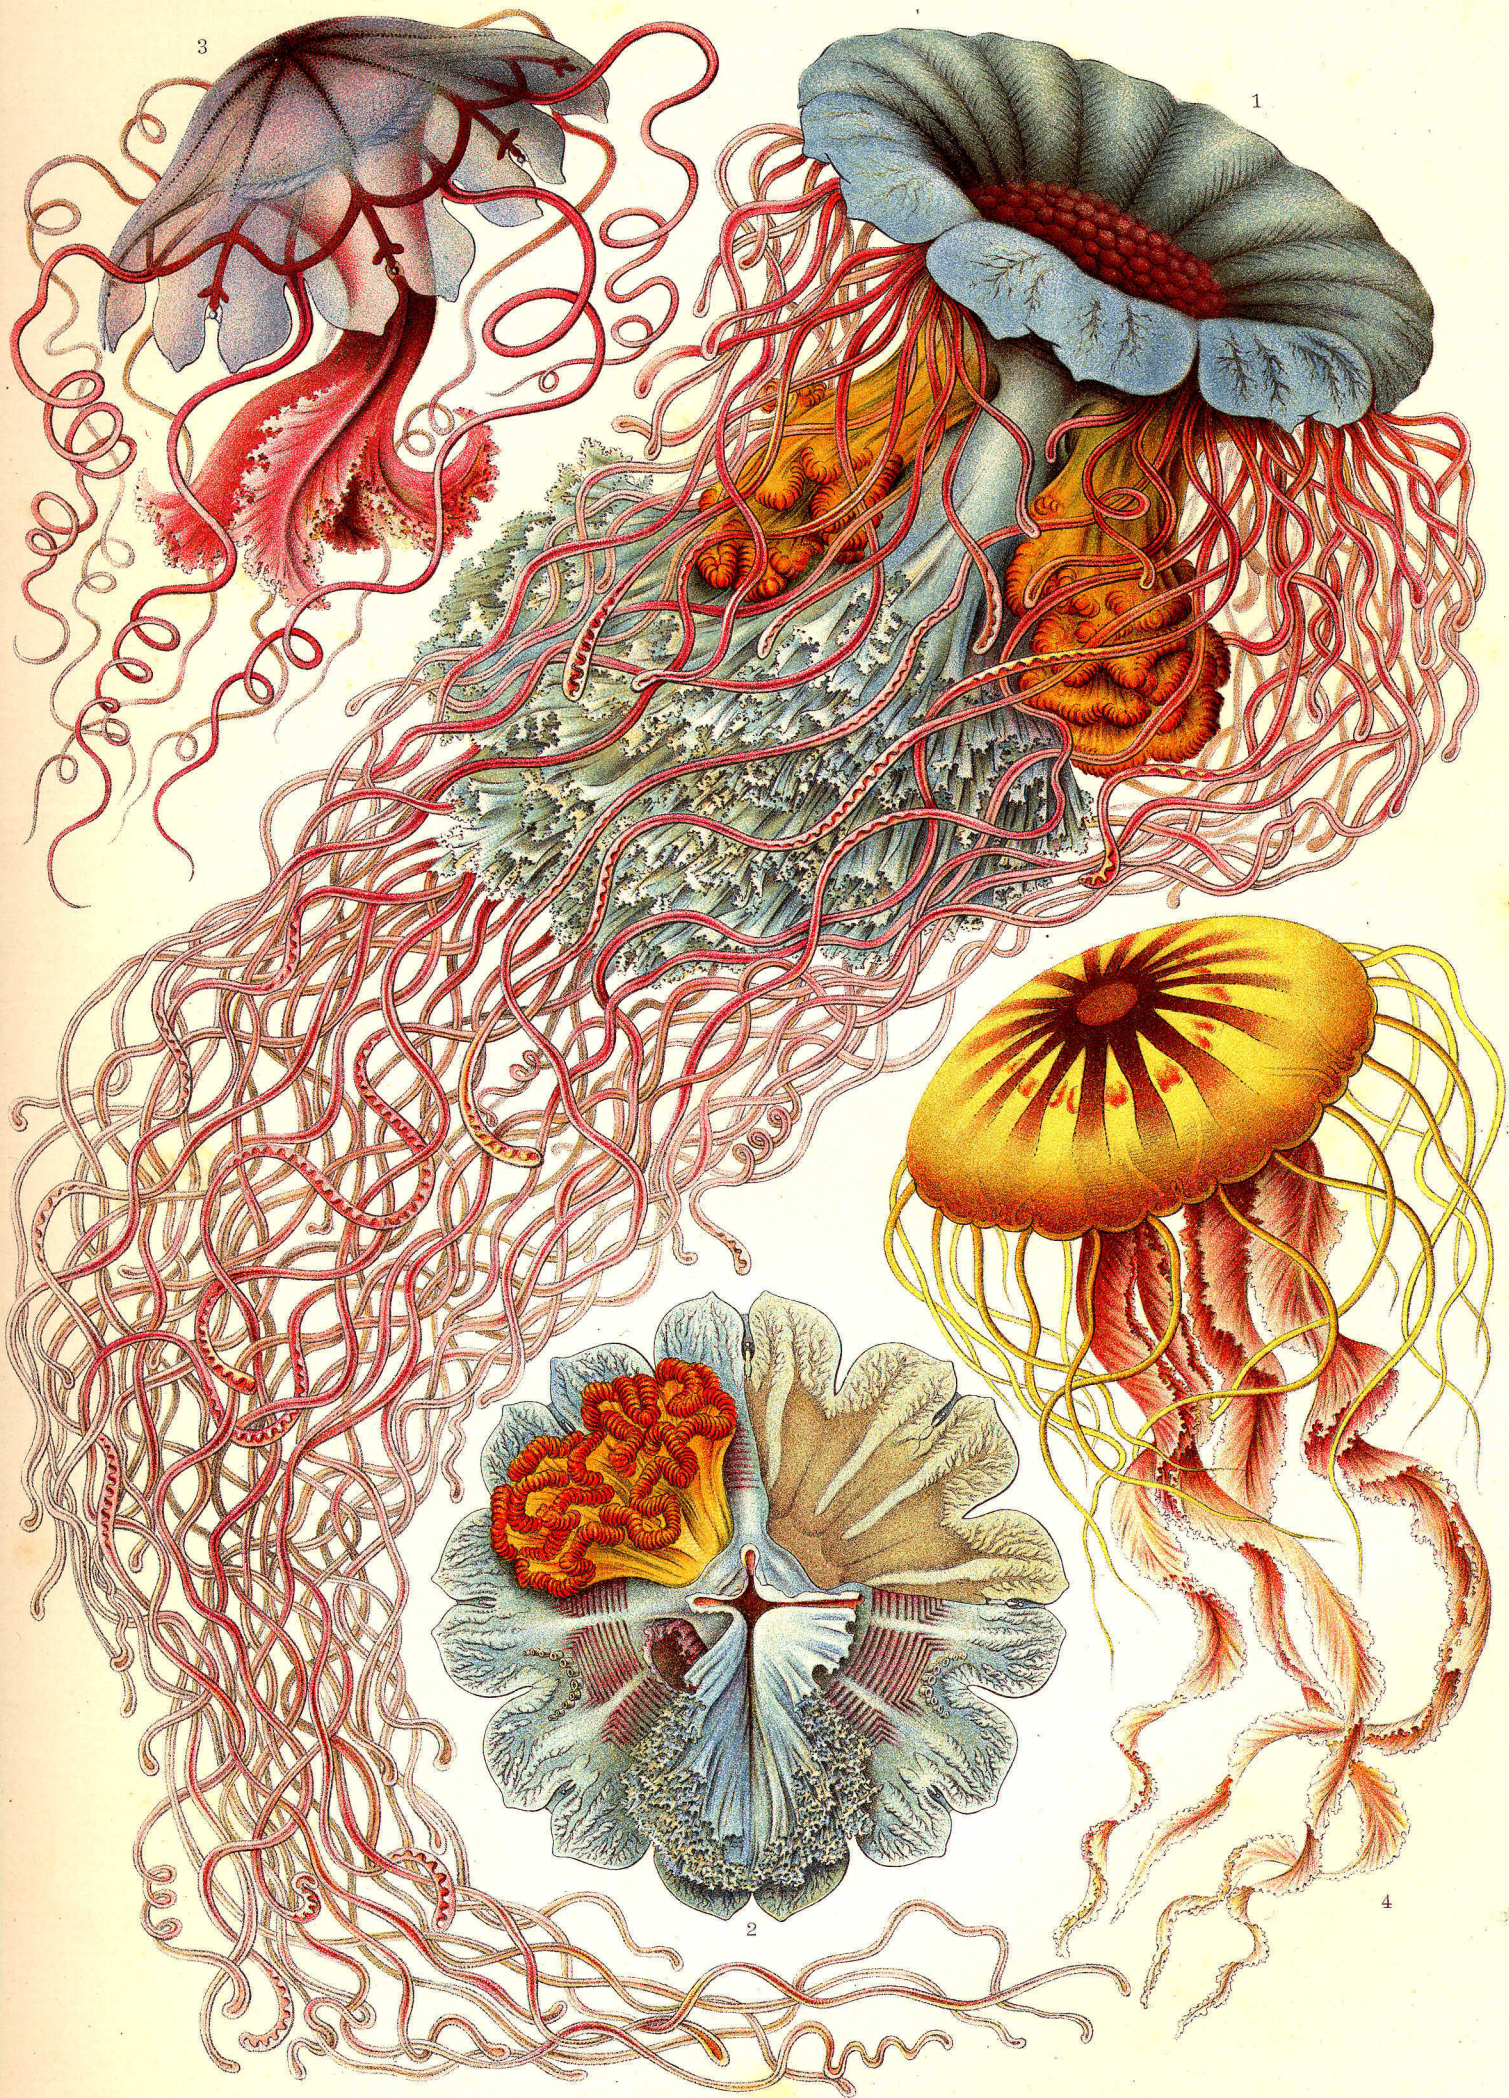

Calcispongiae. — Kalkschwämme.

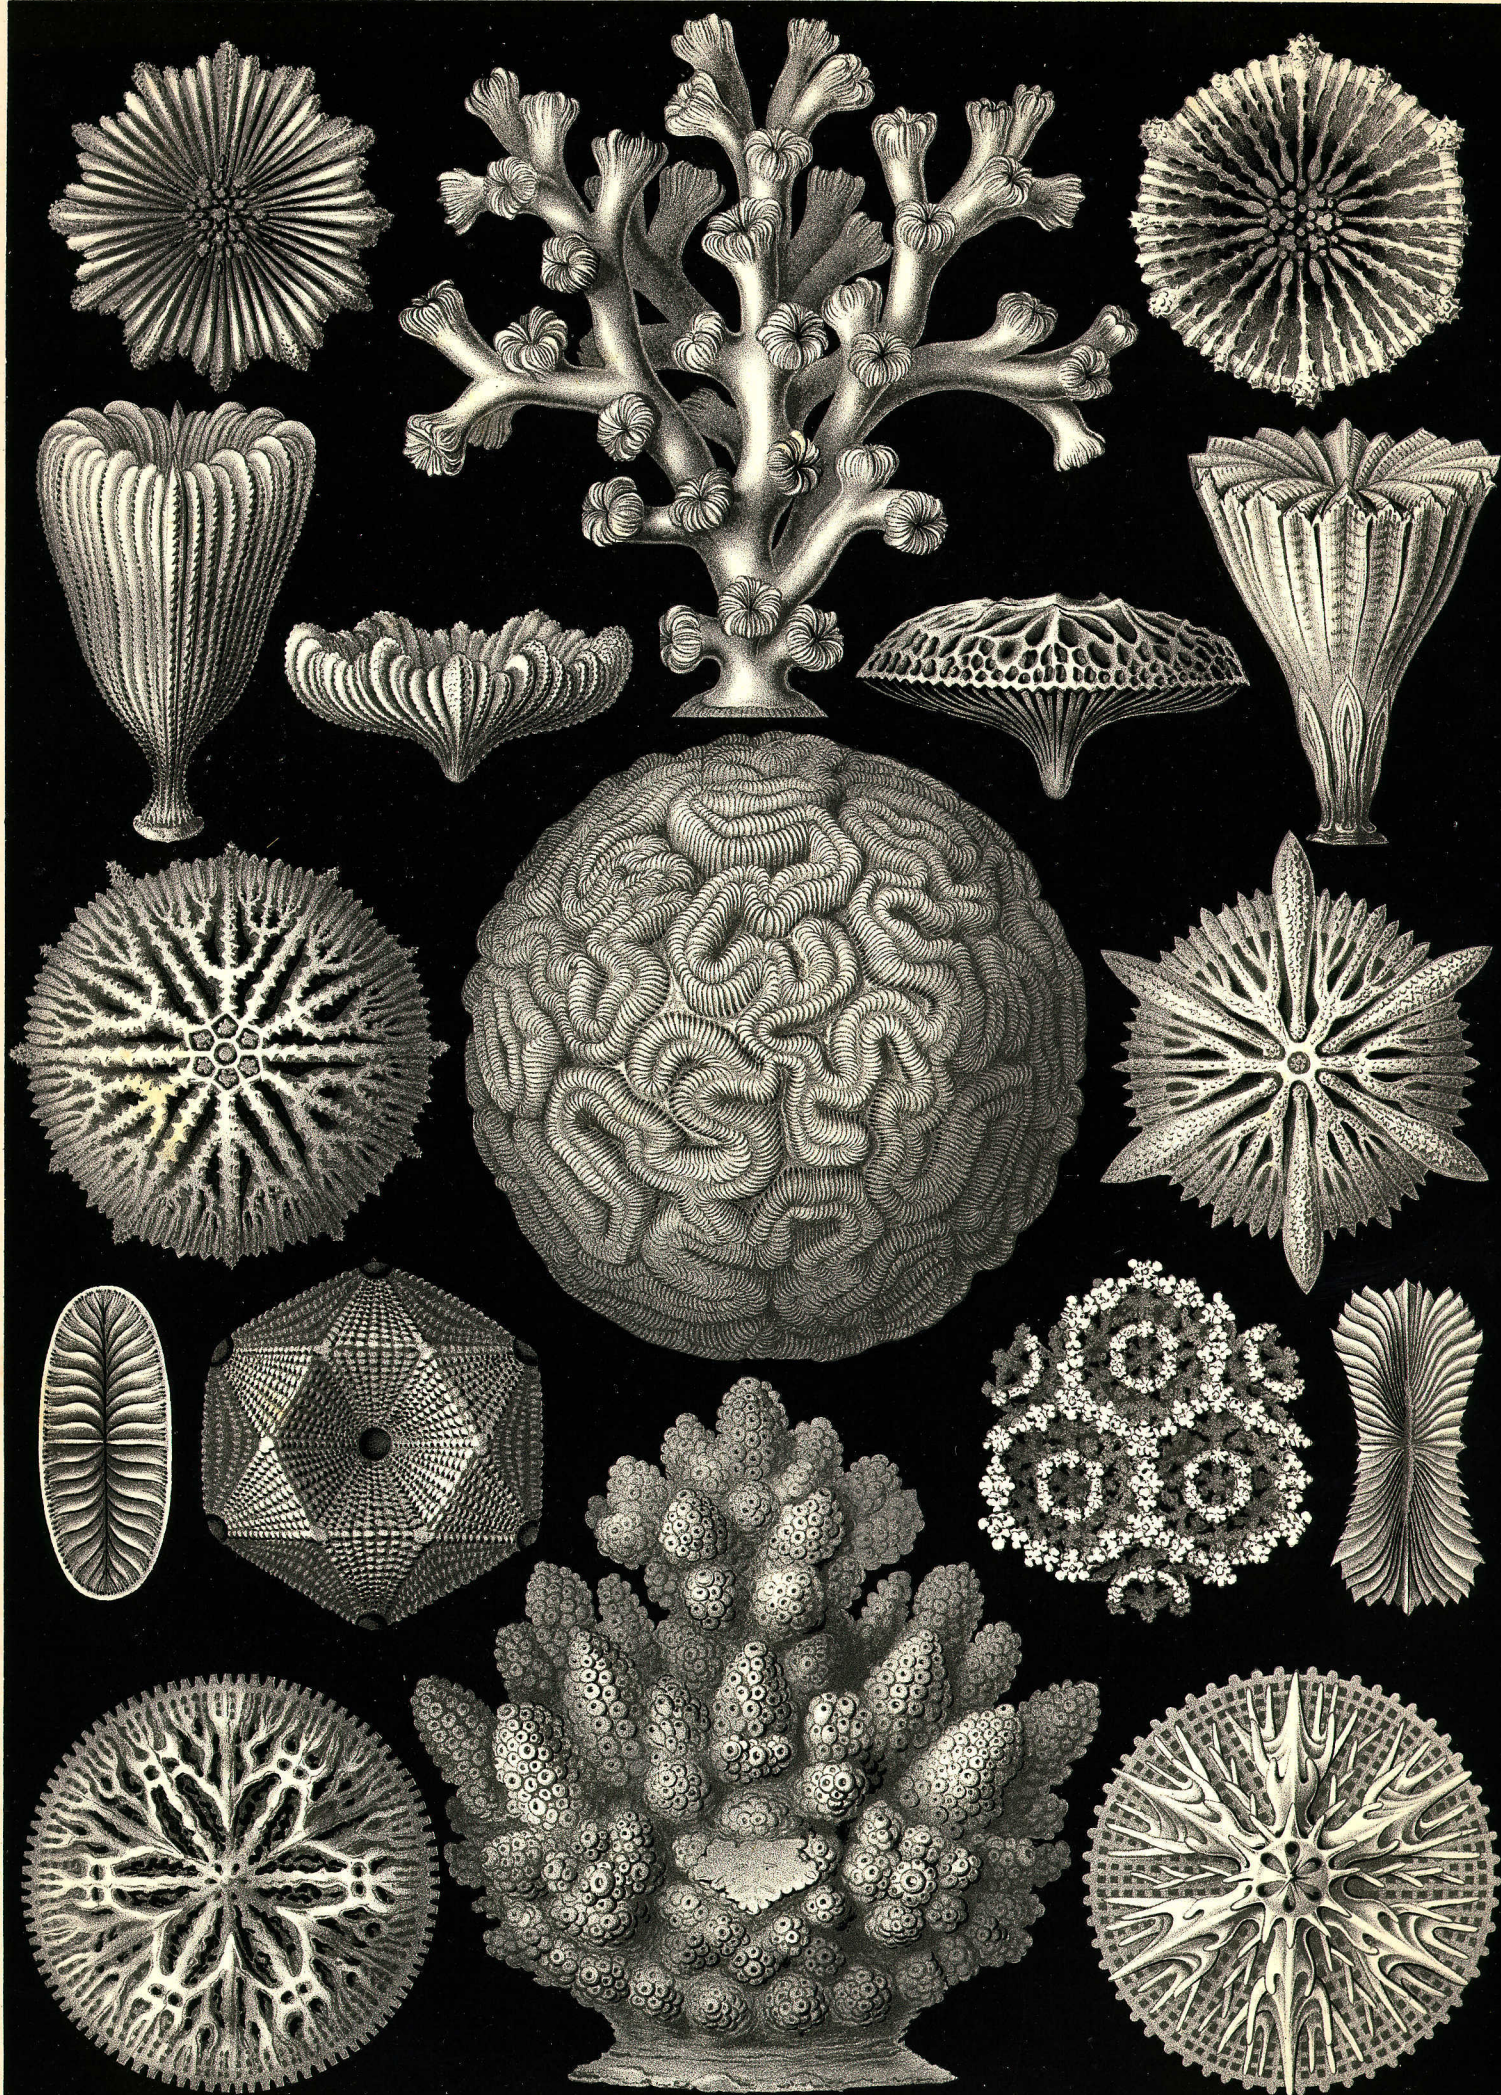

Tubulariae. — Röhrenpolypen.

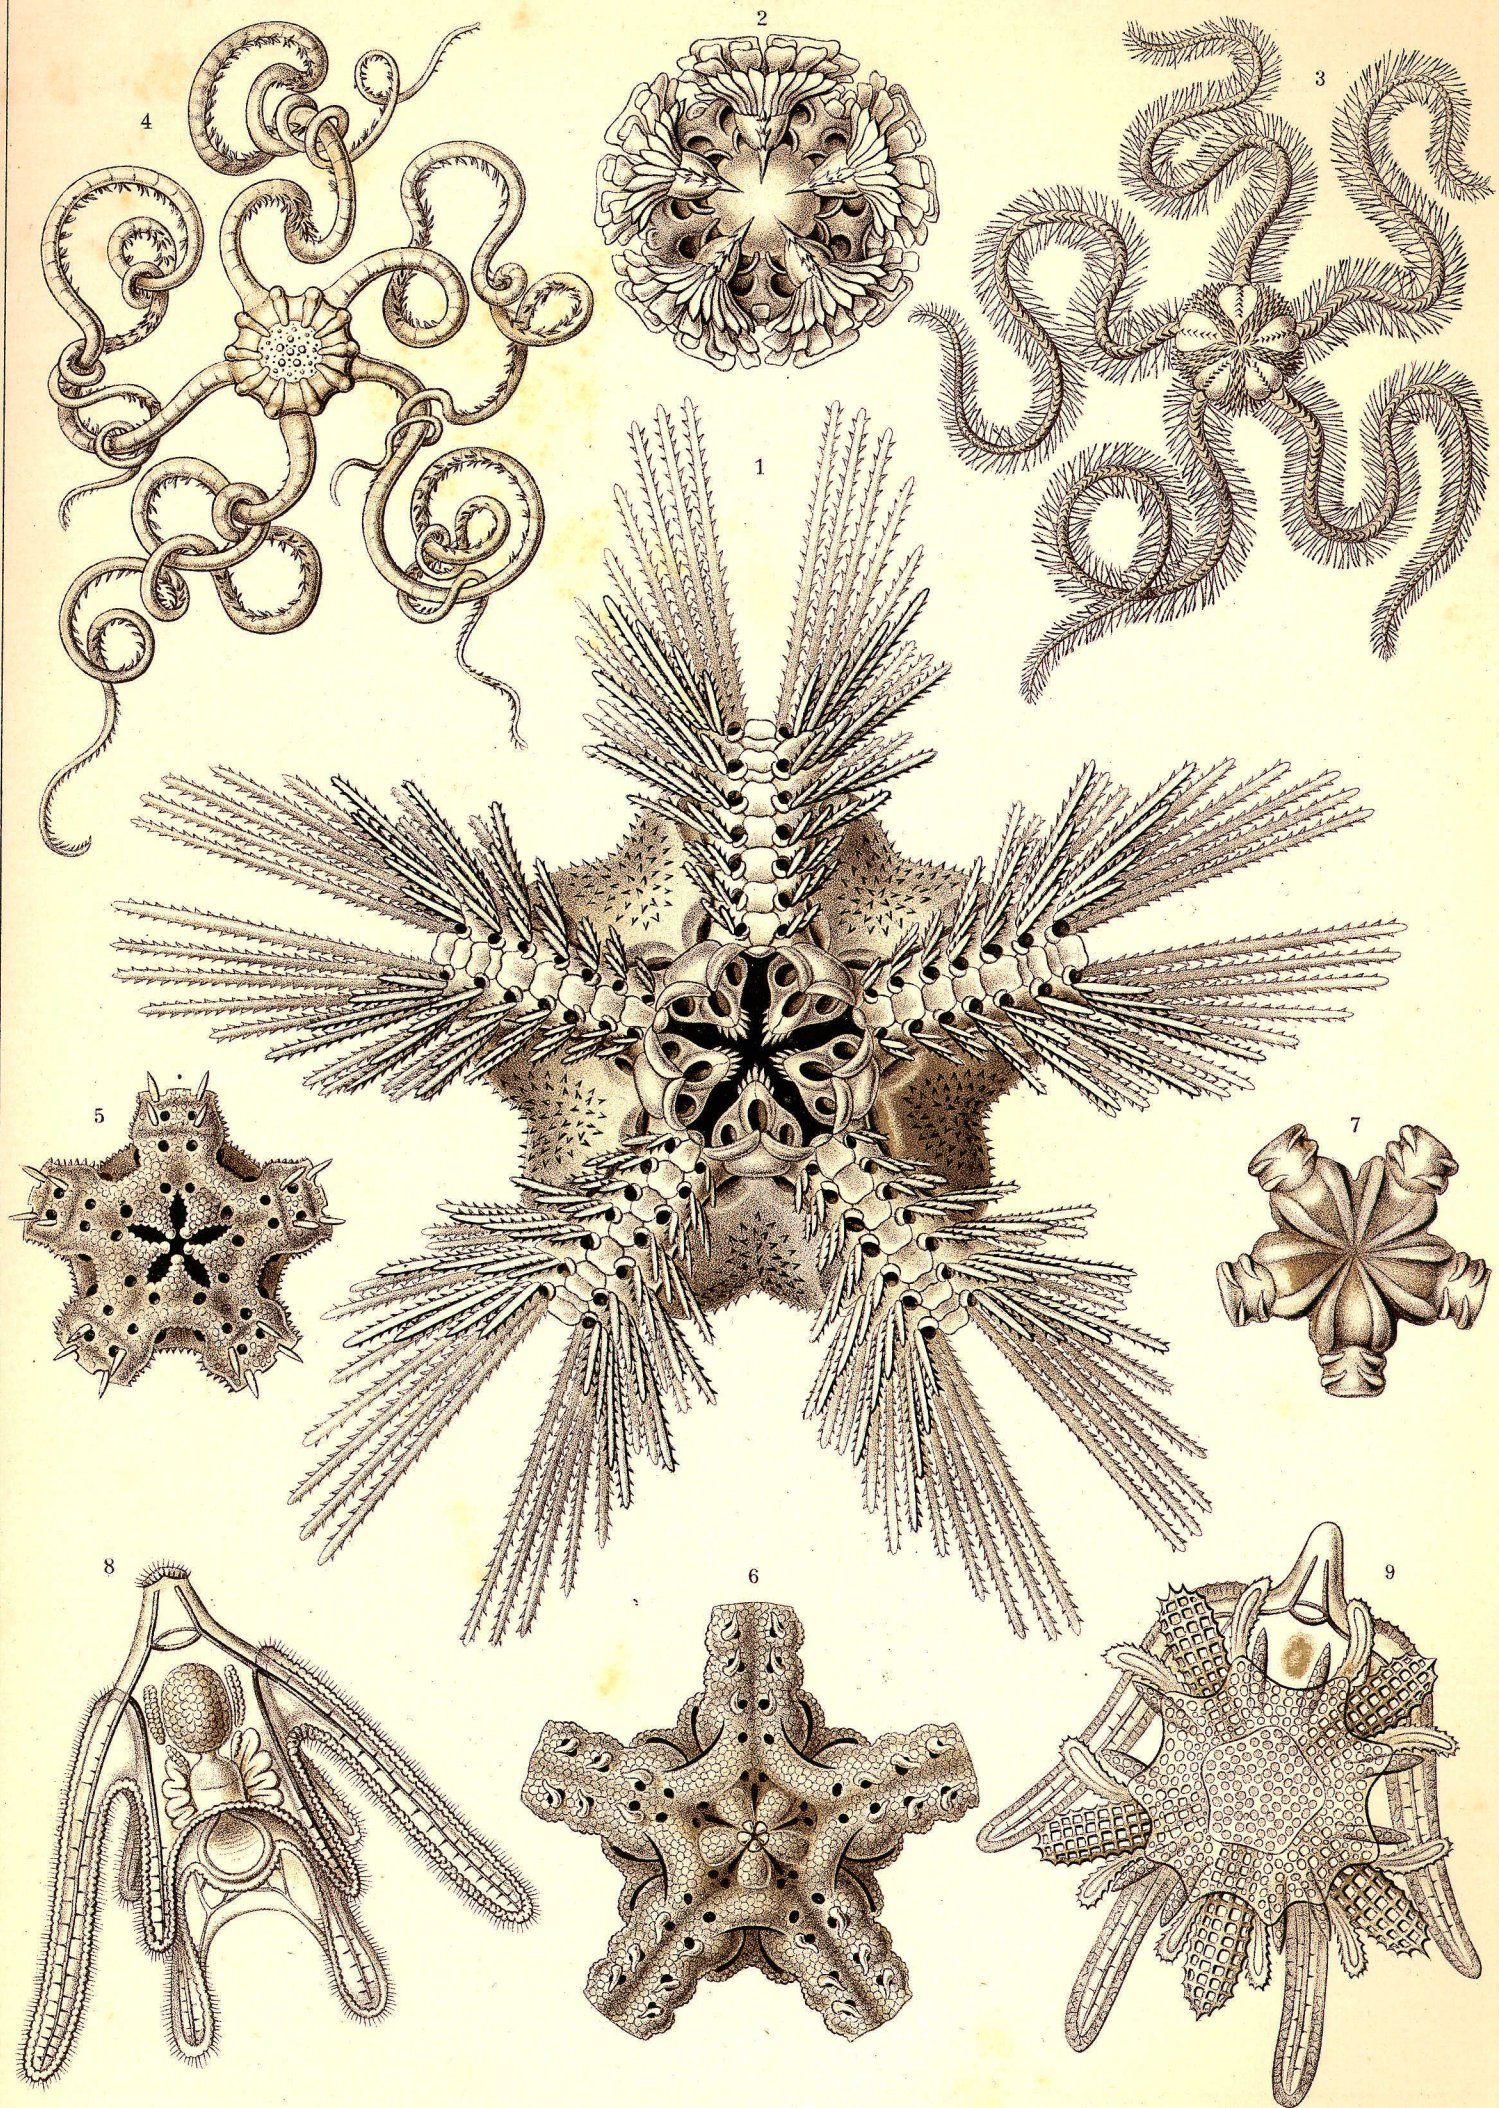

Siphonophorae. — Staatsquallen.

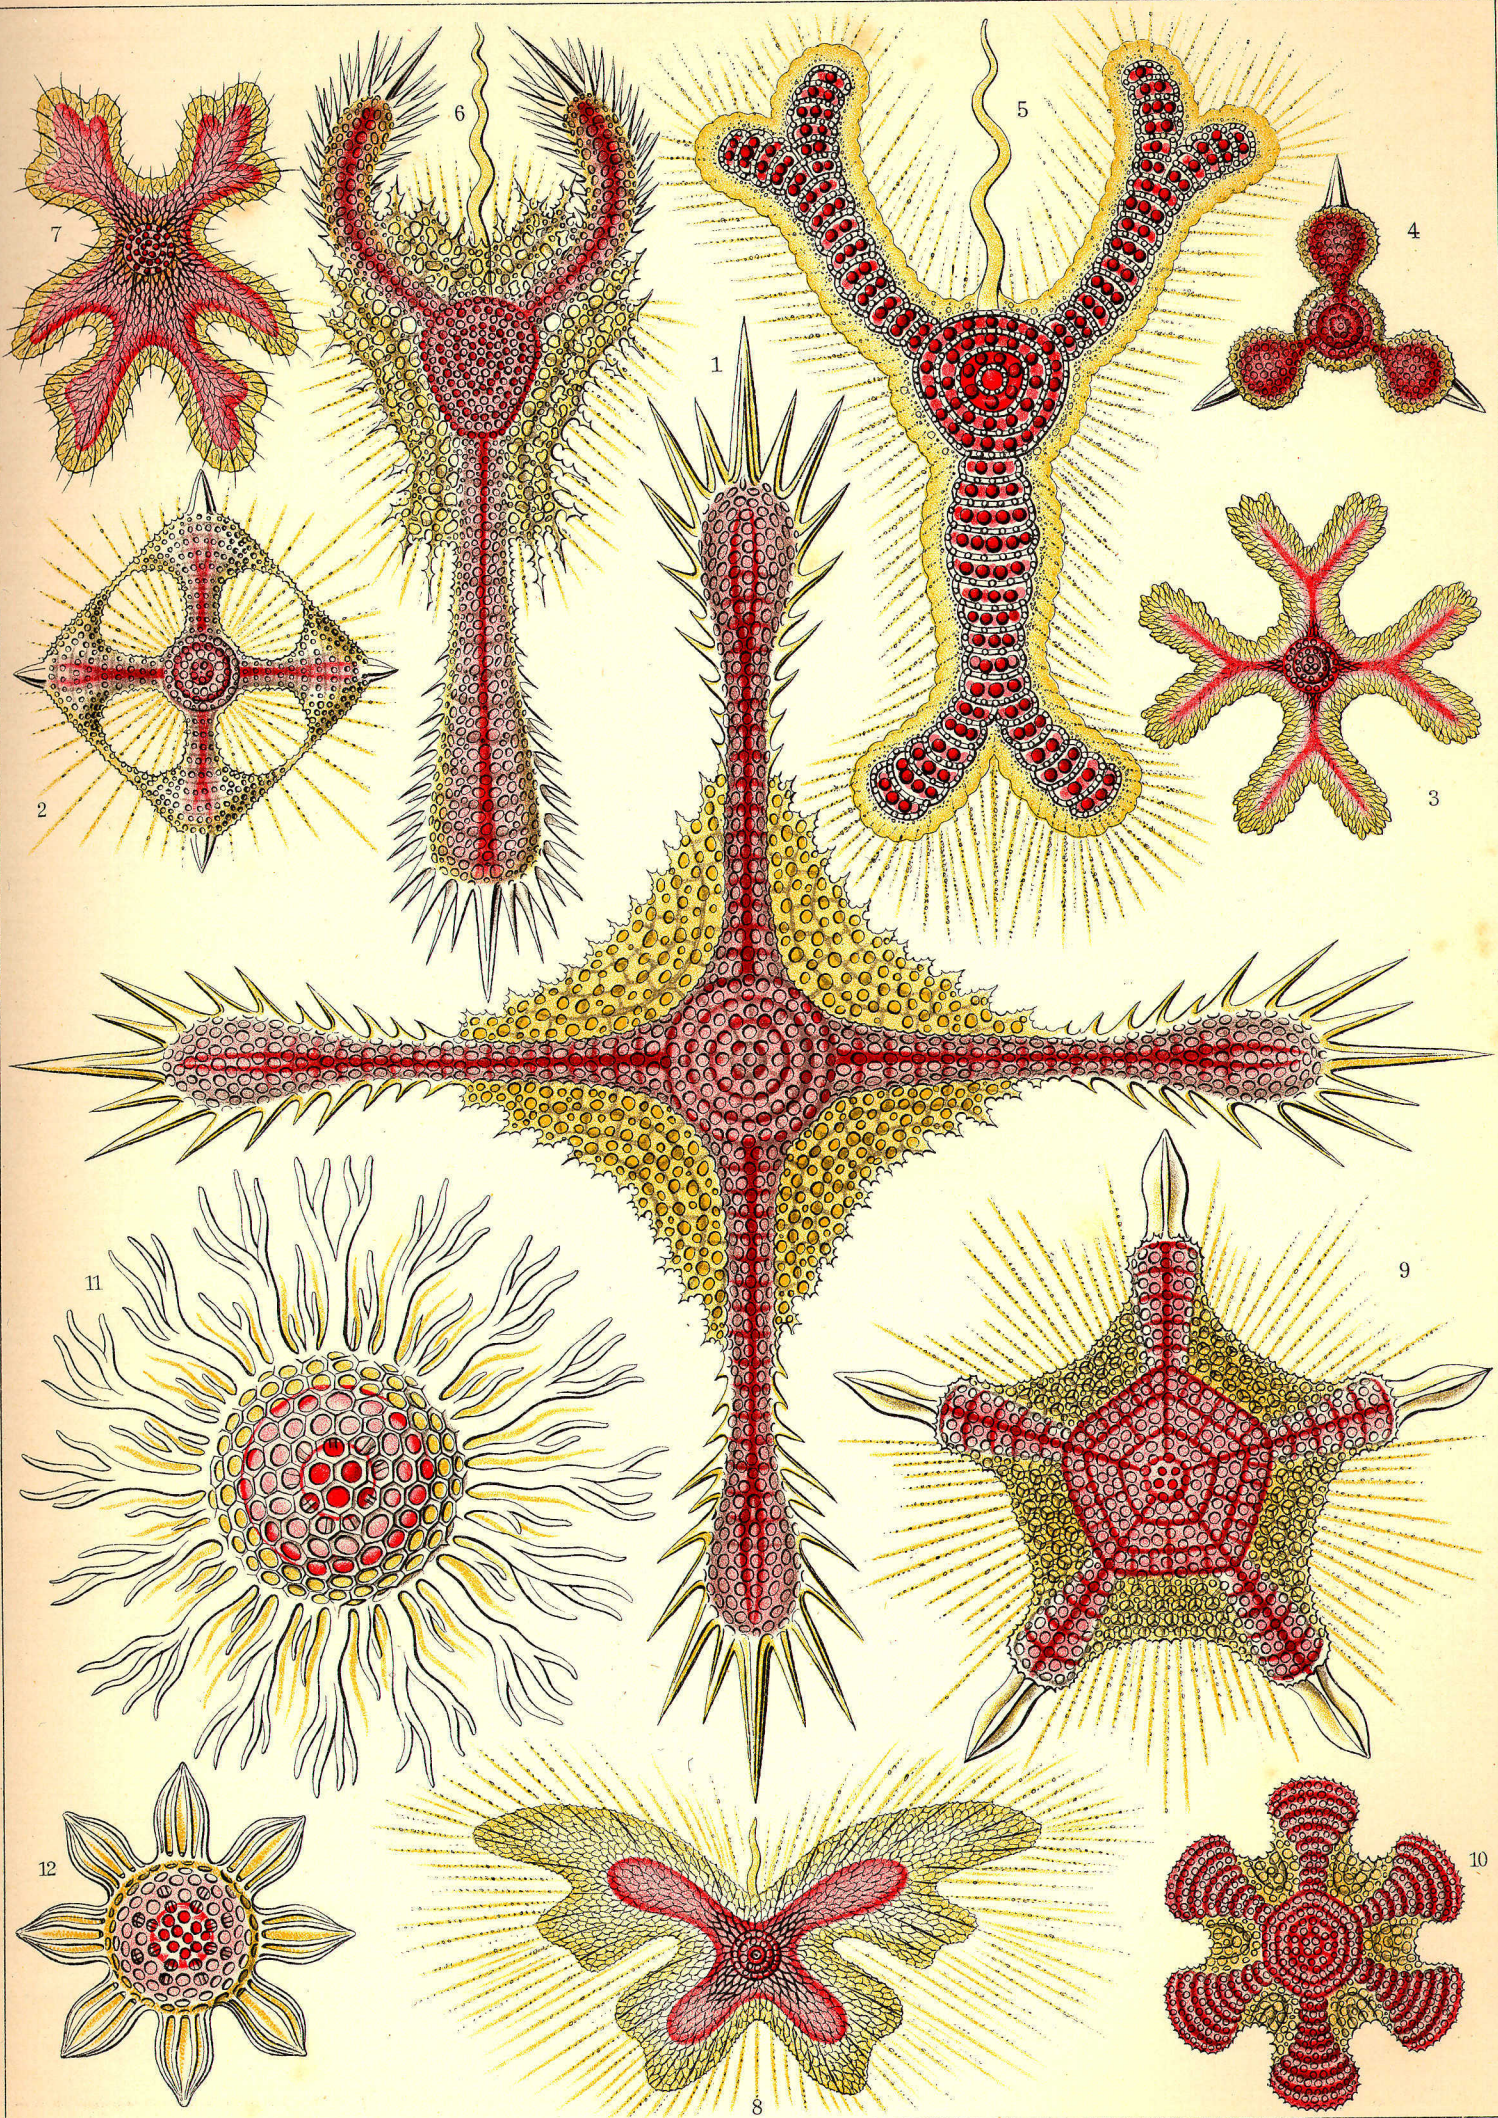

Discomedusae. — Scheibenquallen.

Hexacoralla. — Sechsstrahlige Sternkorallen.

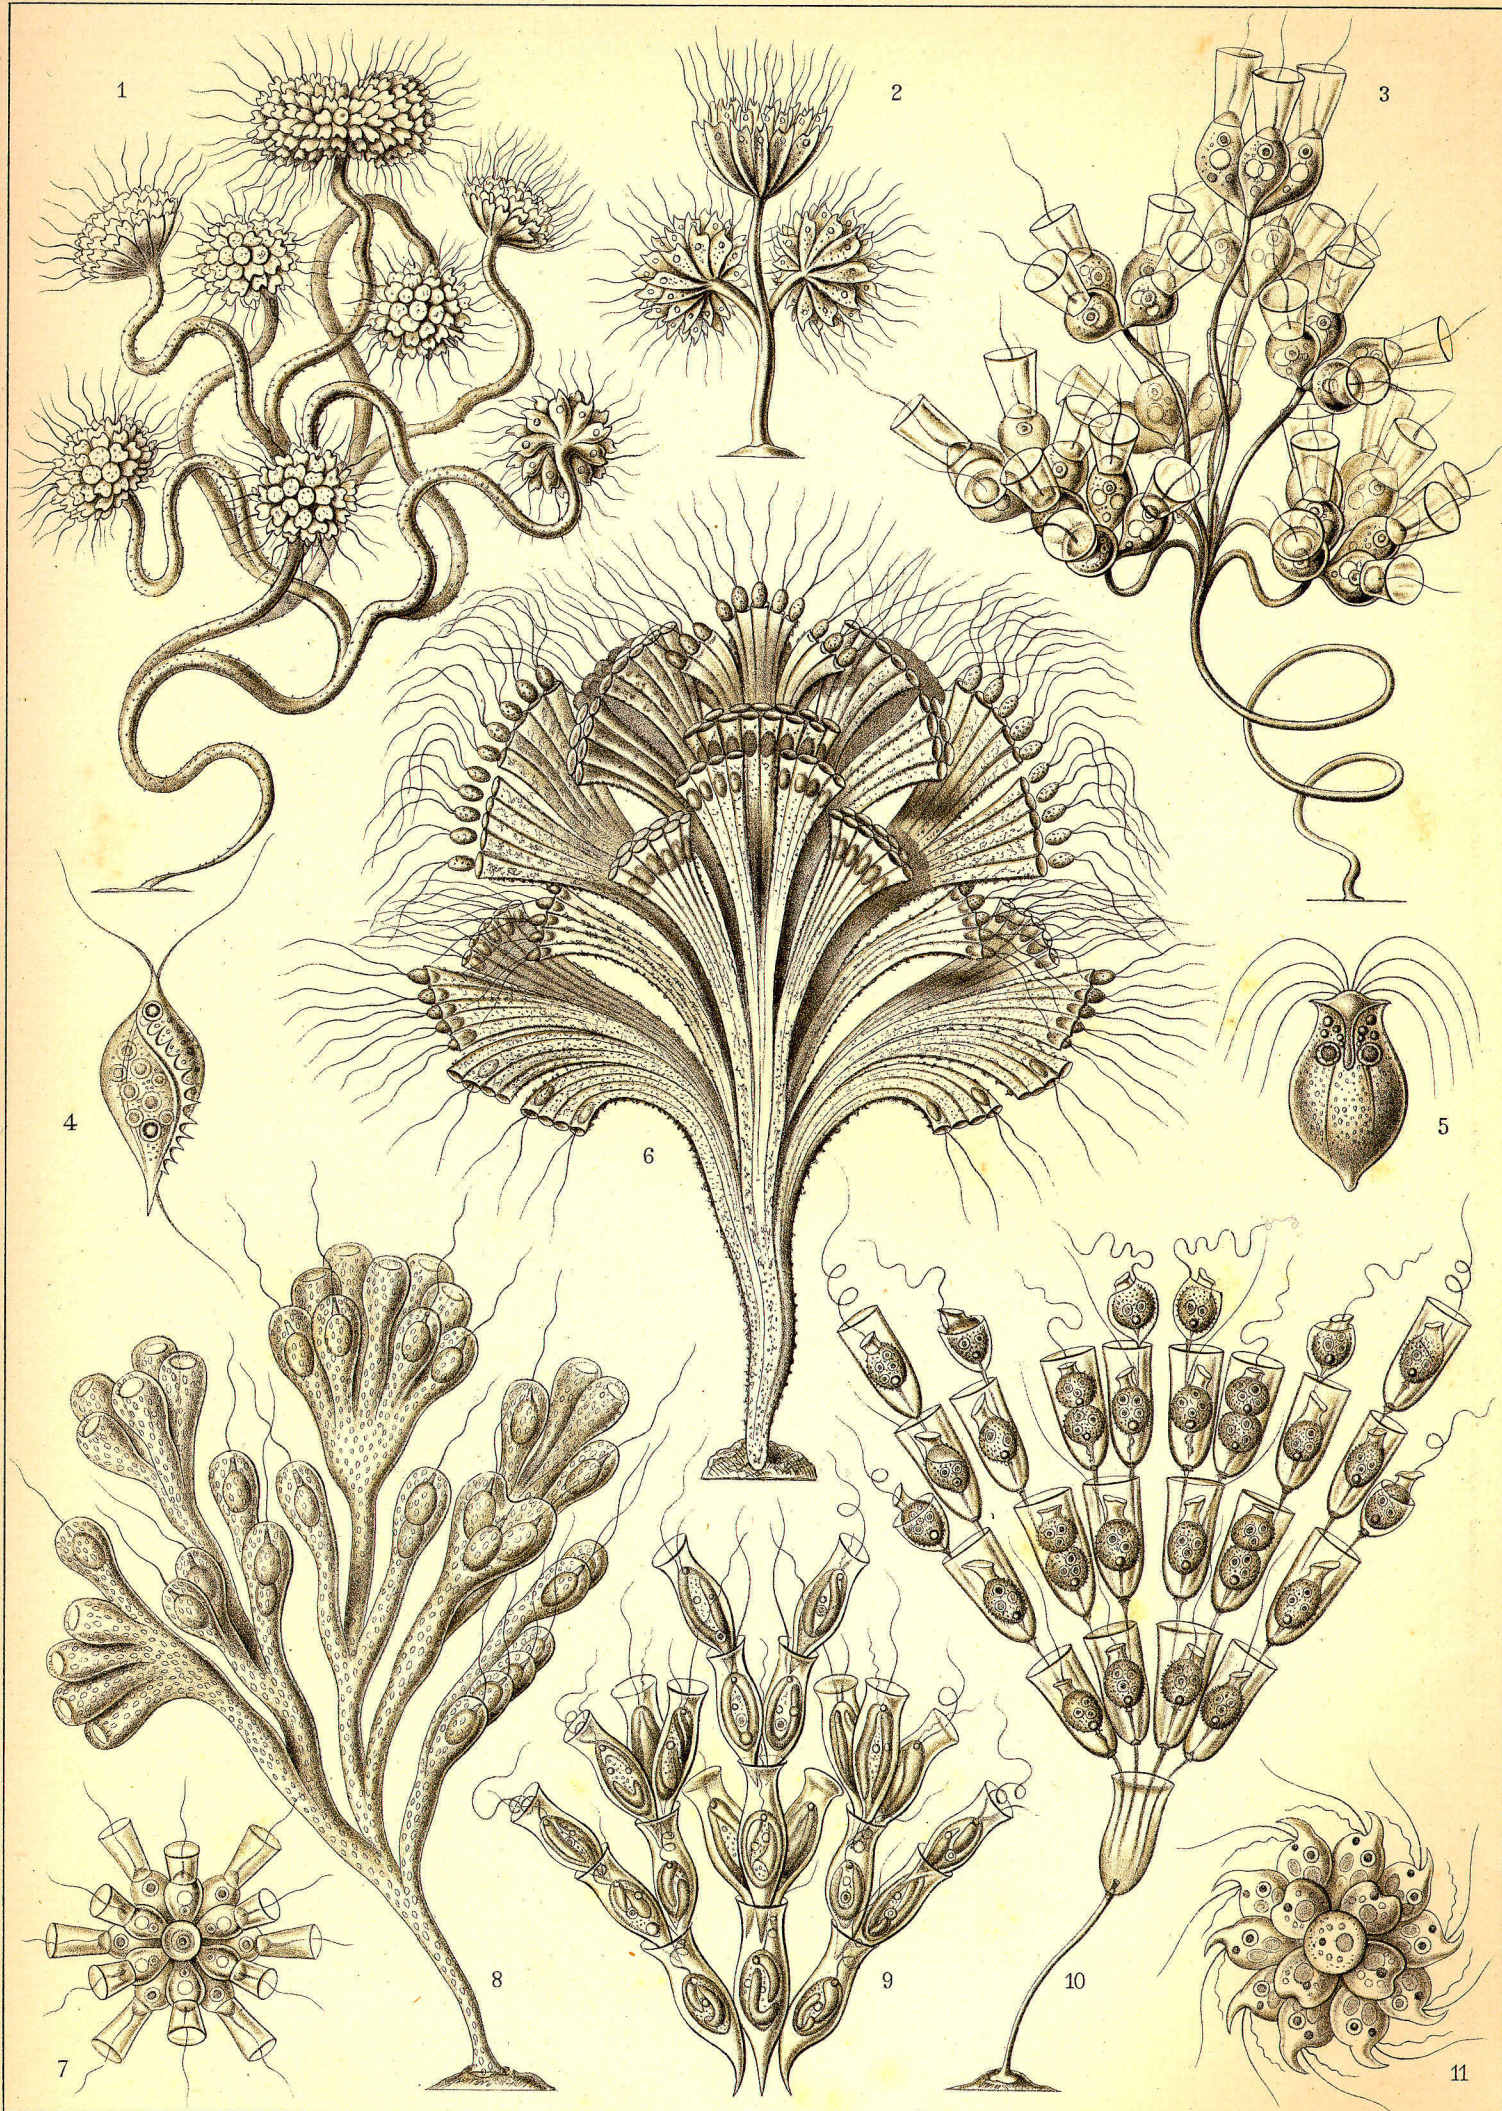

Ophiodea. — Schlangensterne.

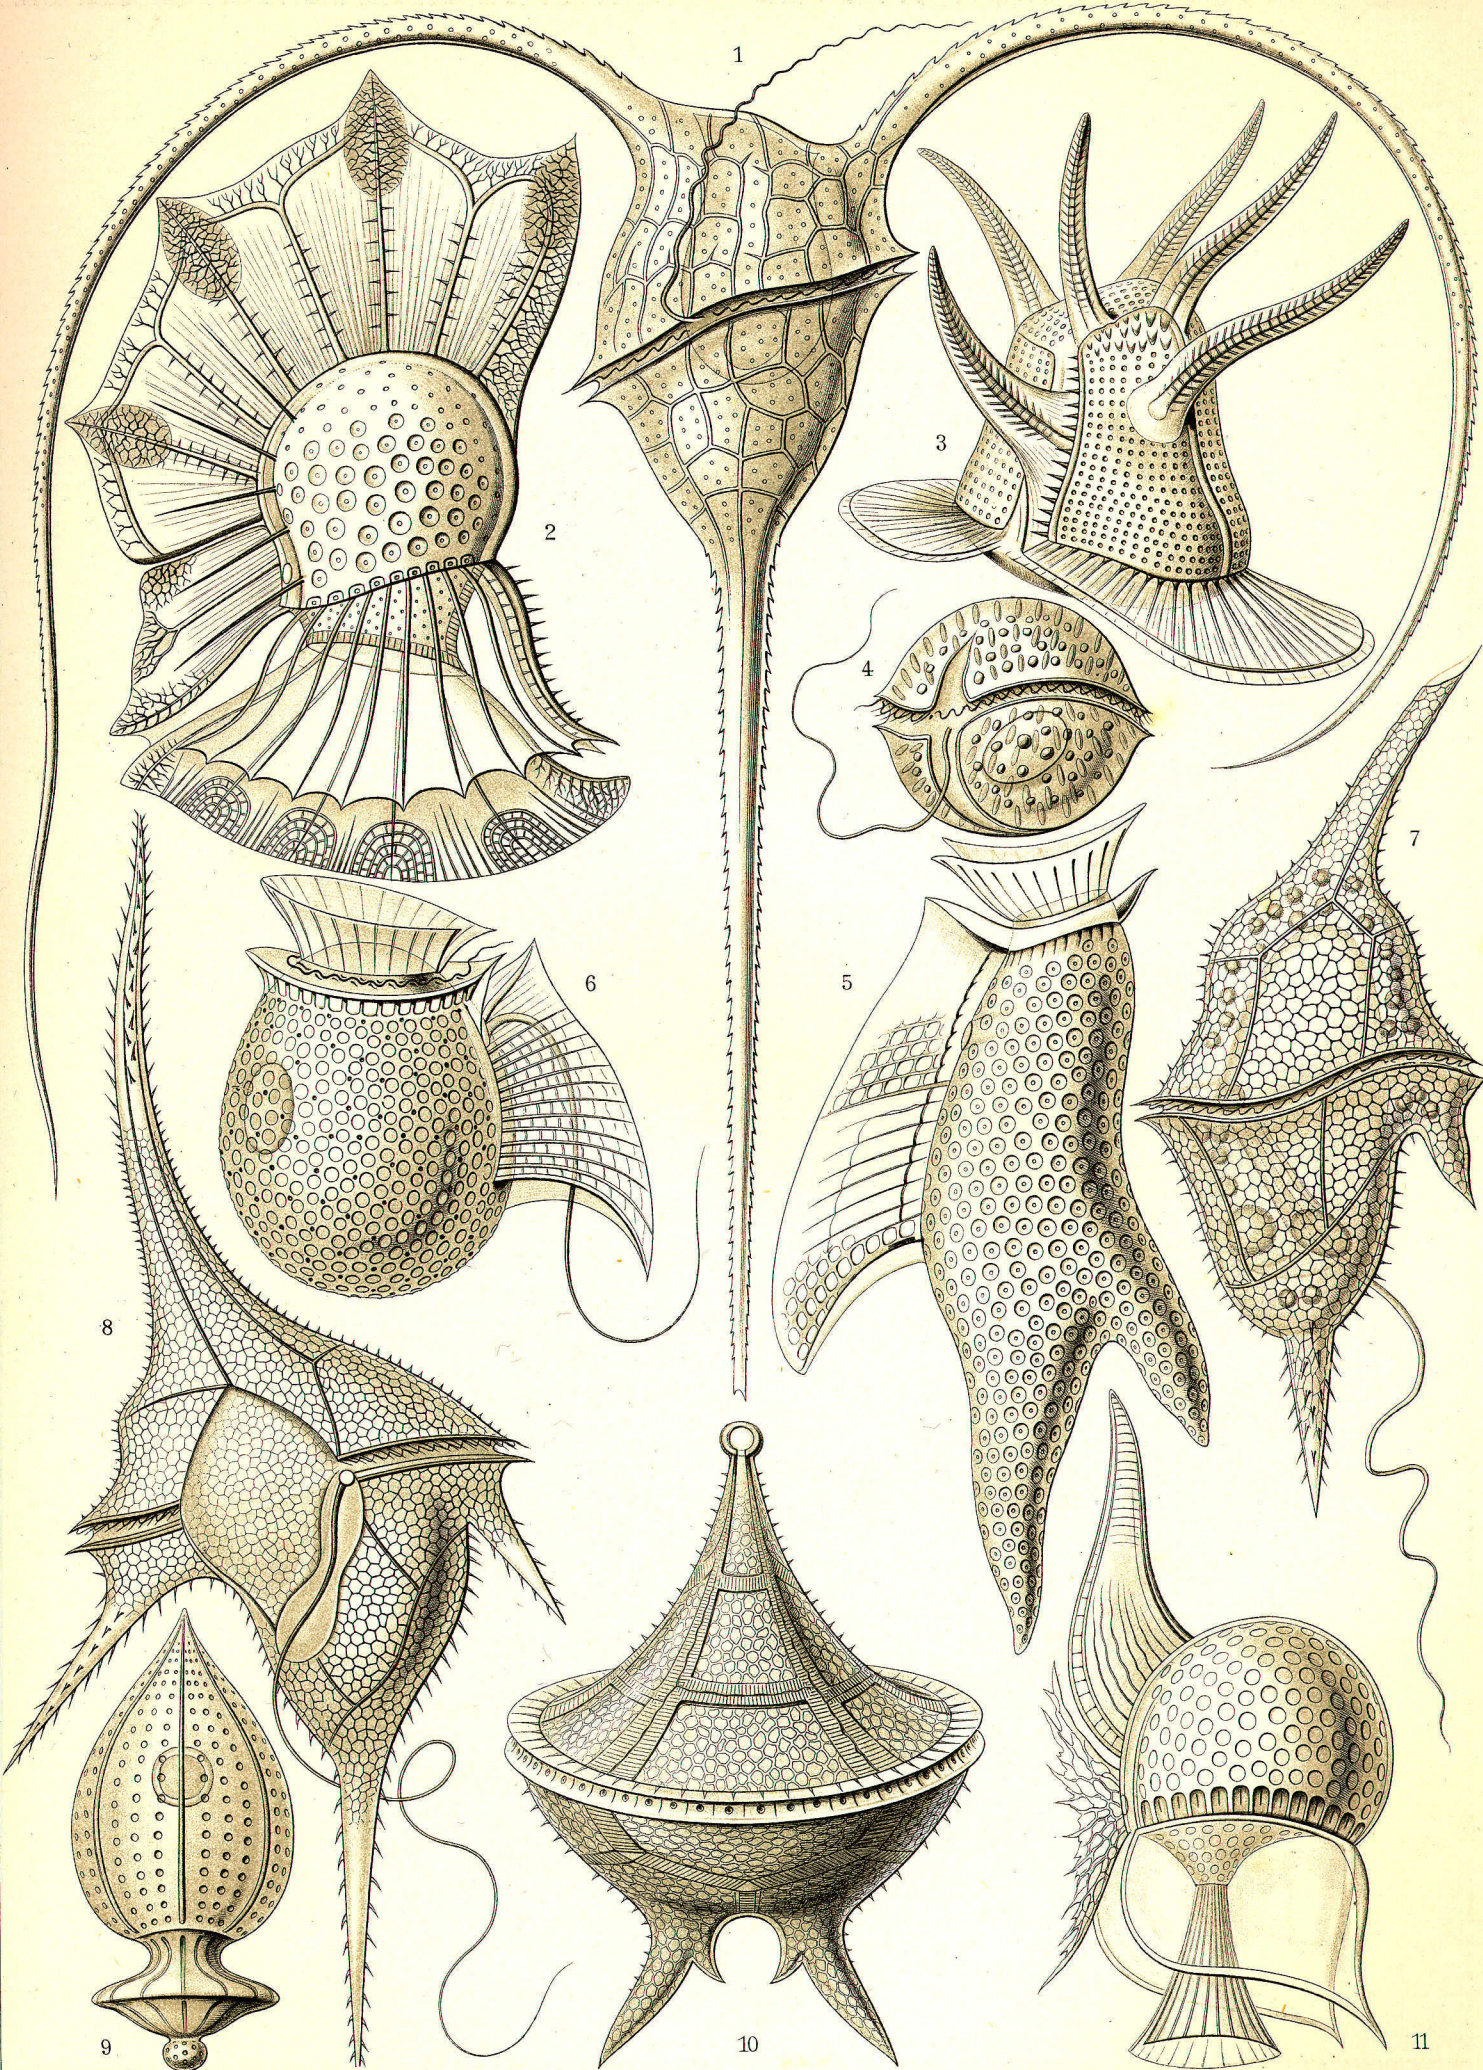

Discoidea. — Scheiben-Strahllinge.

Talamophora. — Hammerlinge.

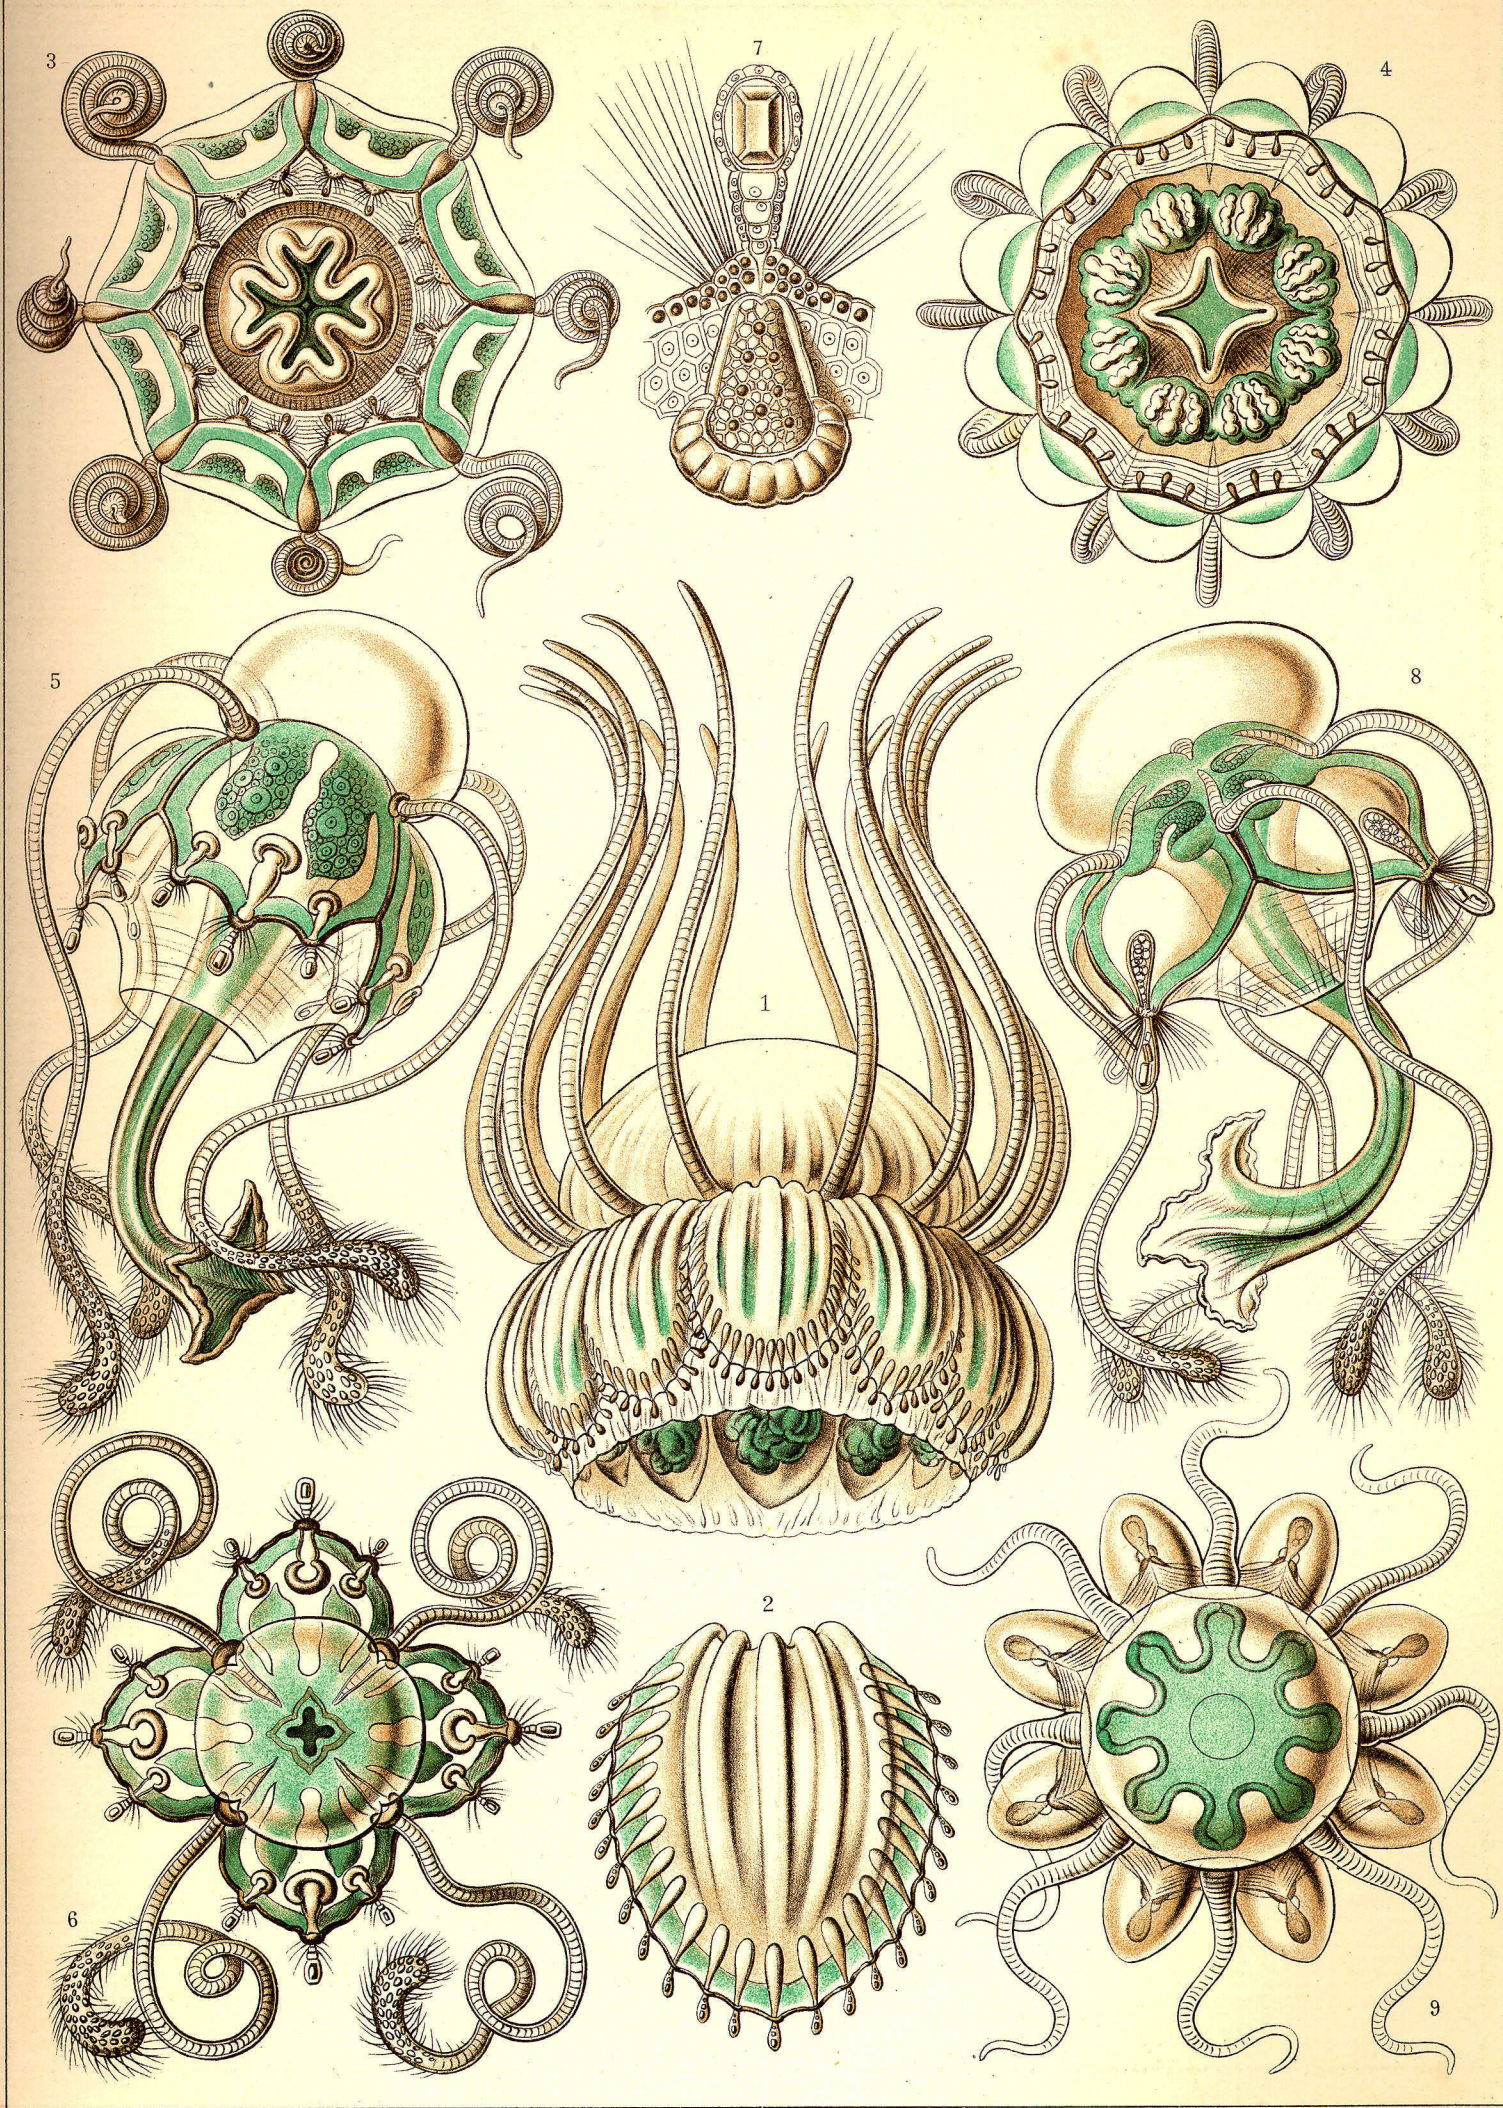

Flagellata. — Geißlinge.

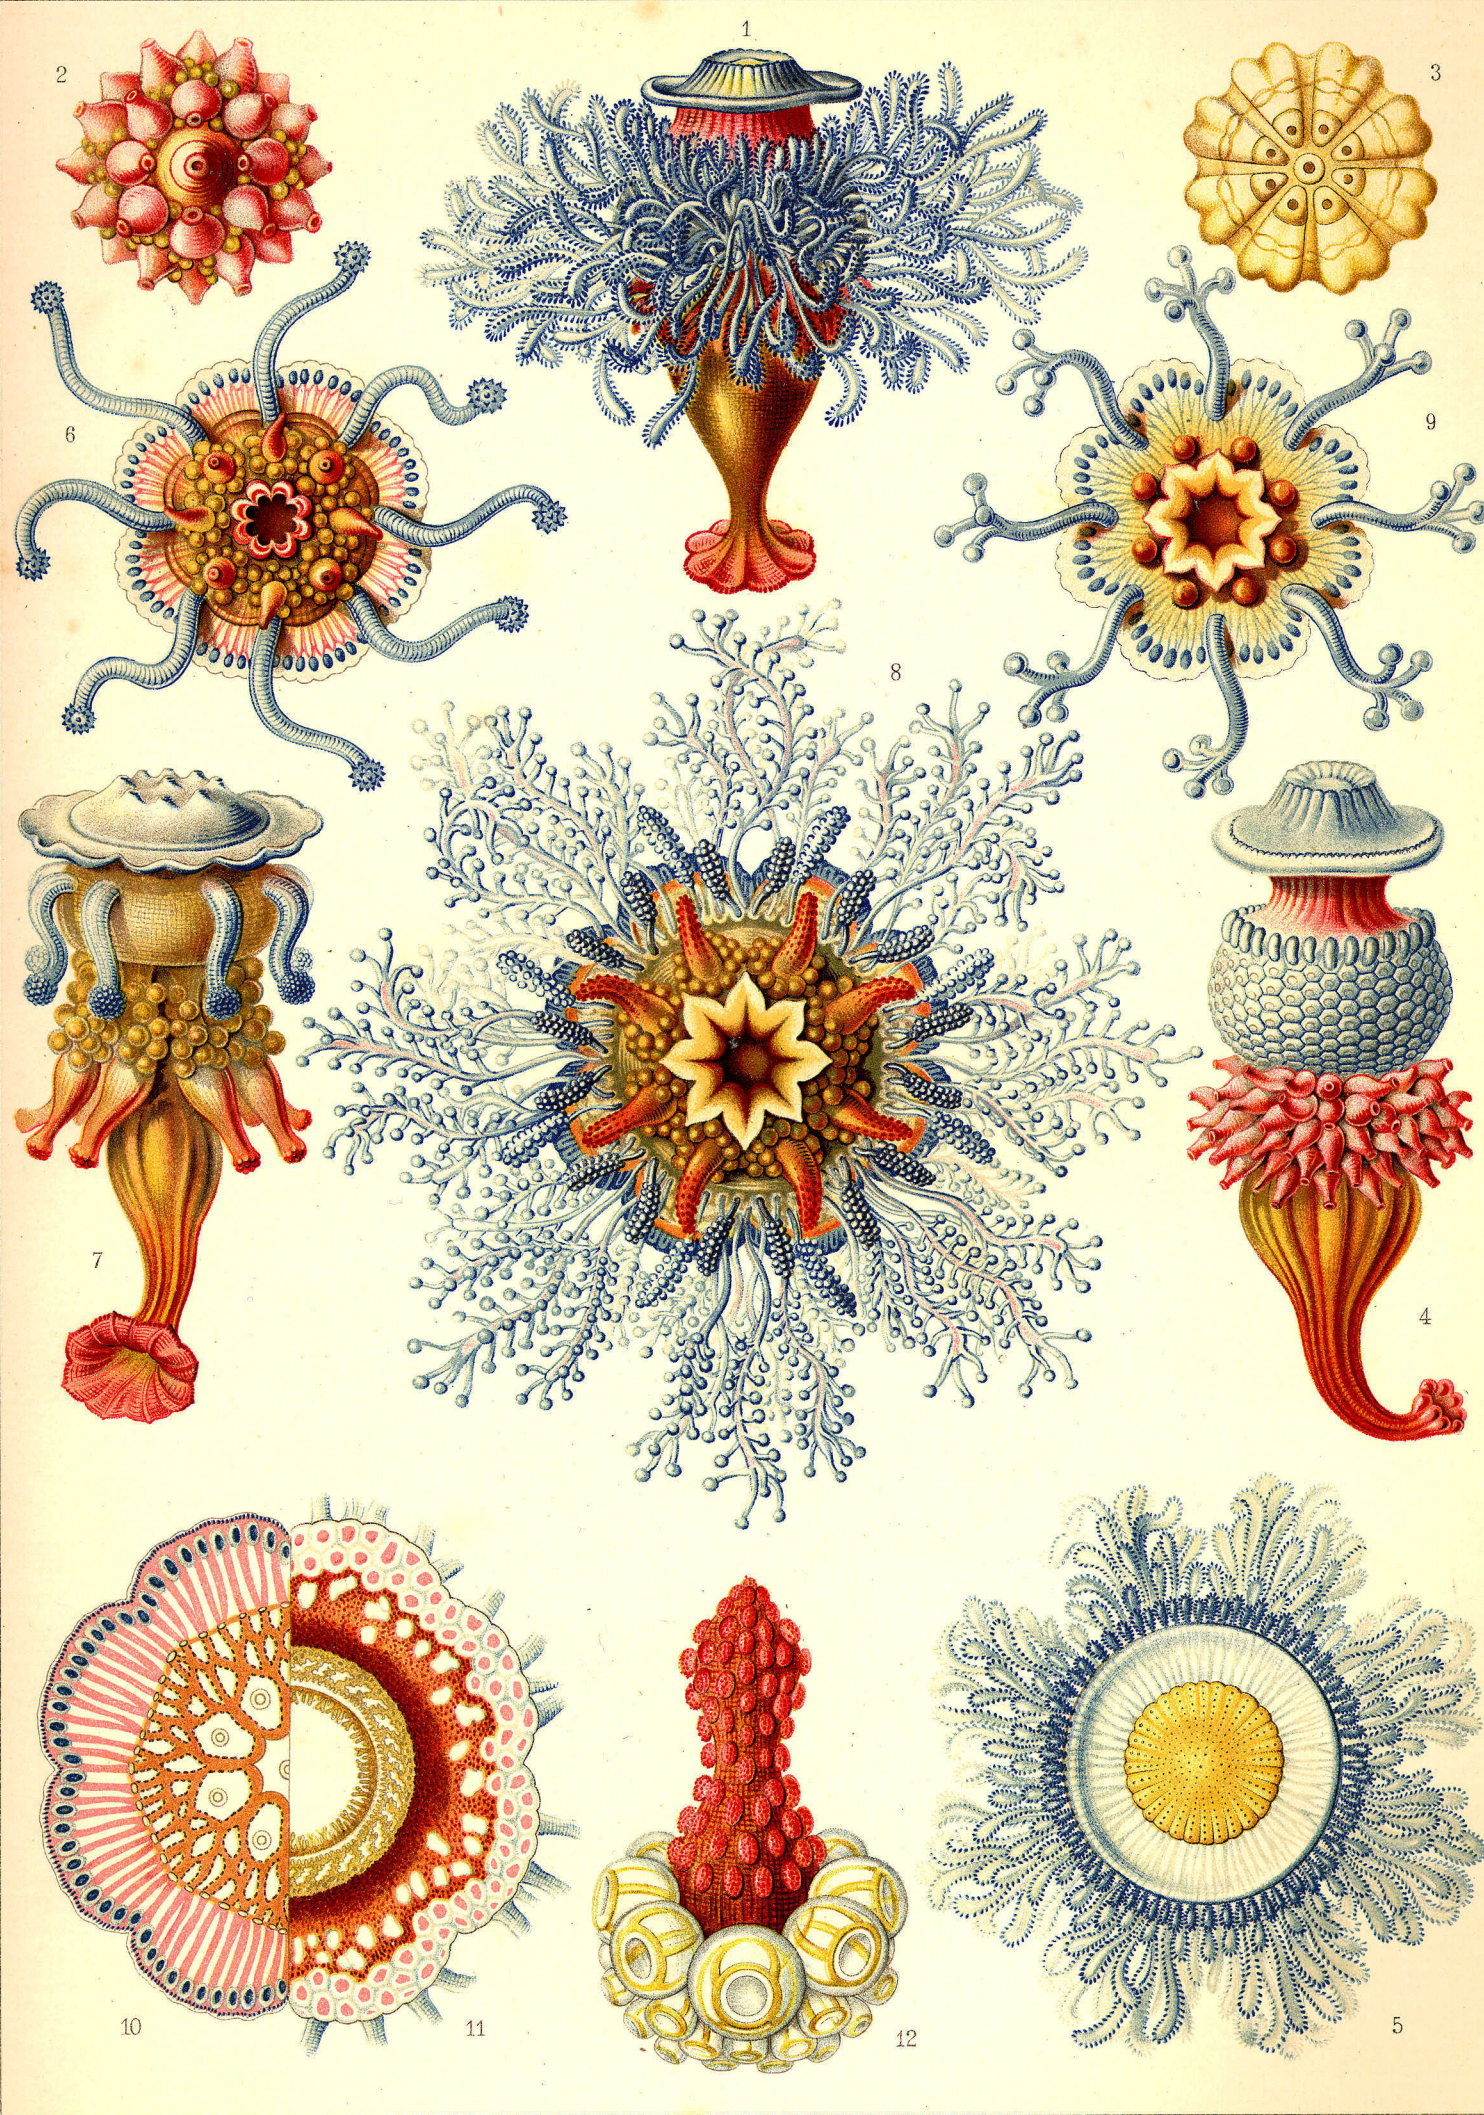

Peridinea. — Geißelhütchen.

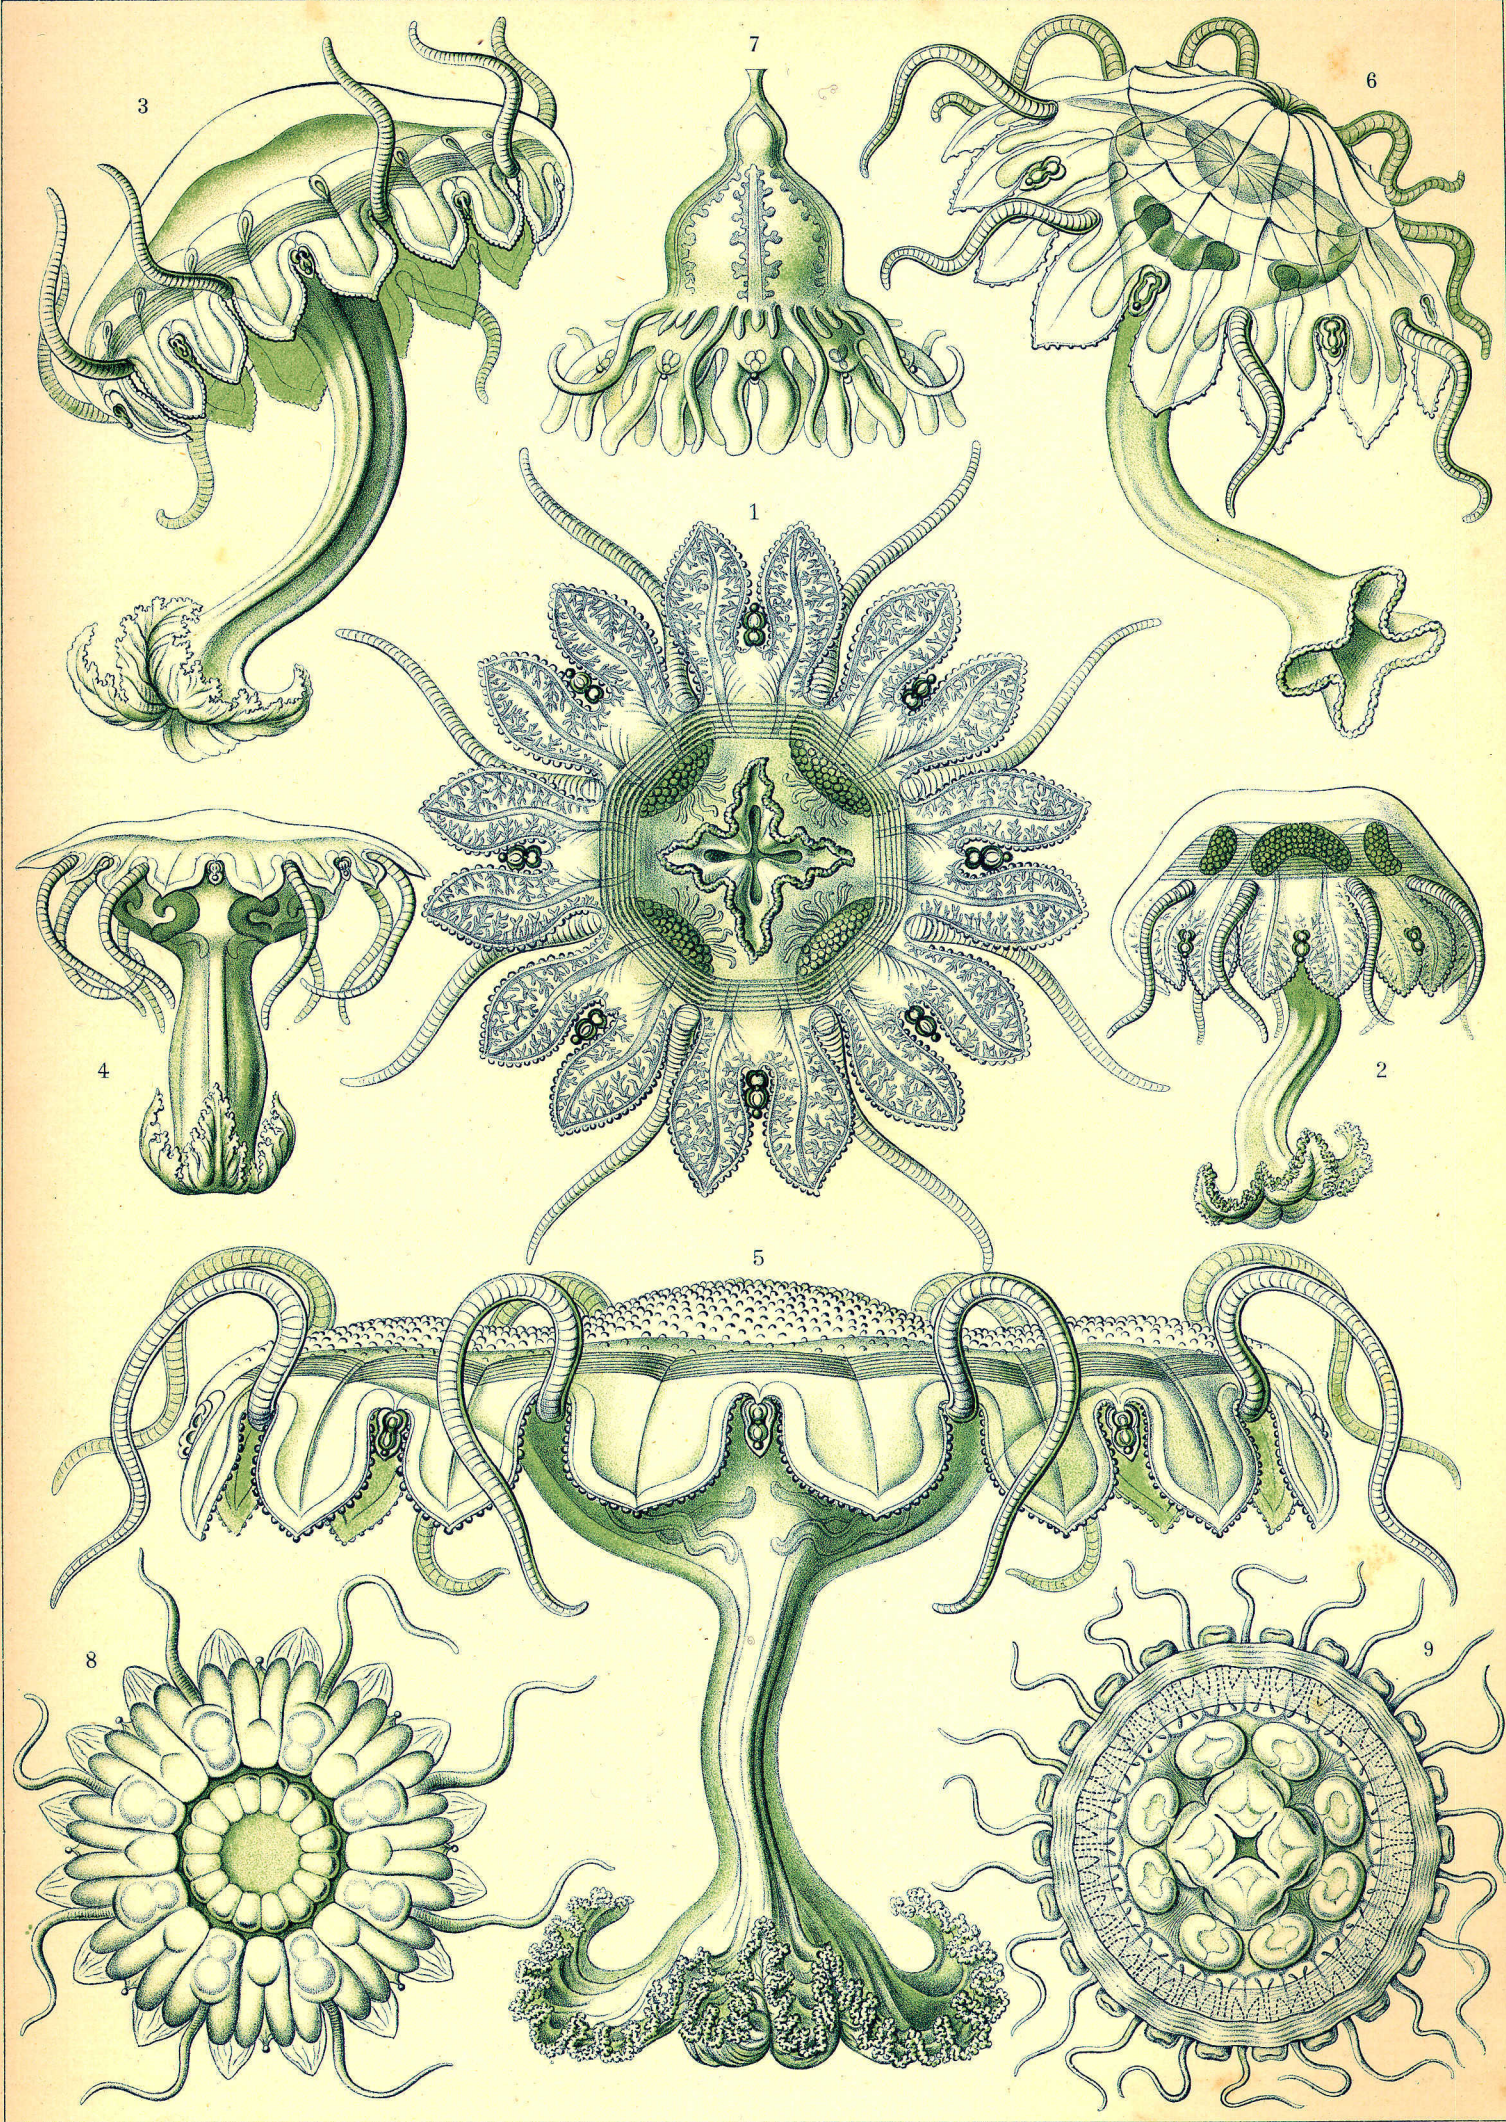

Fucoideae. — Brauntange.

Narcomedusae. — Spangenquassen.

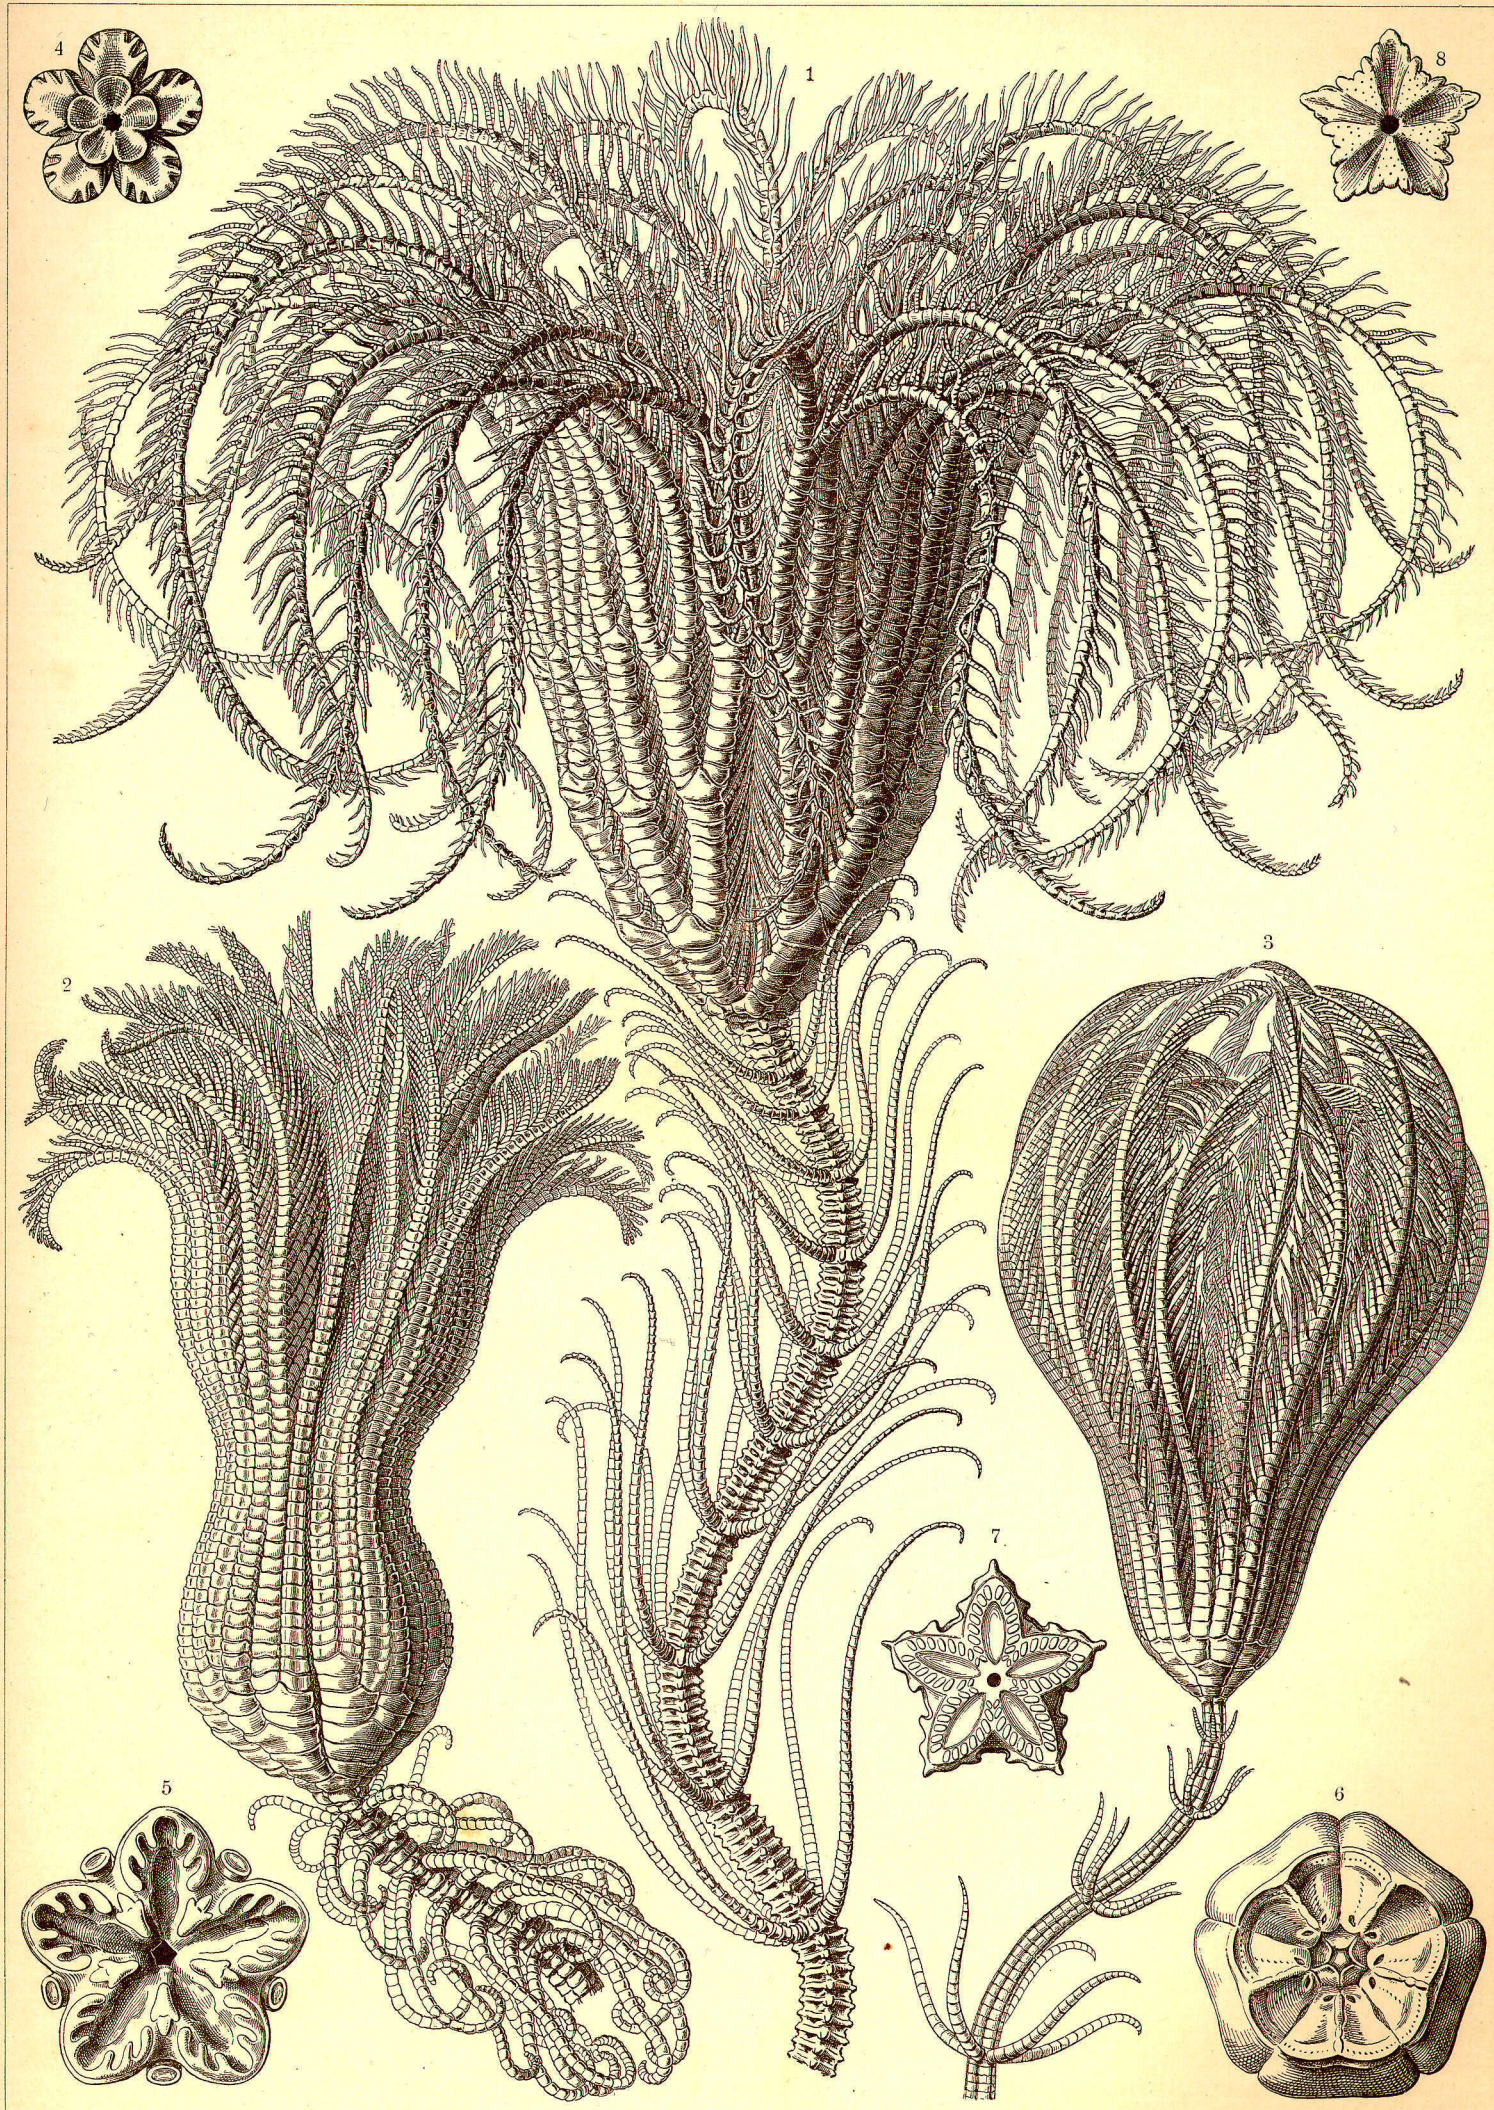

Siphonophorae. — Staatsquassen.

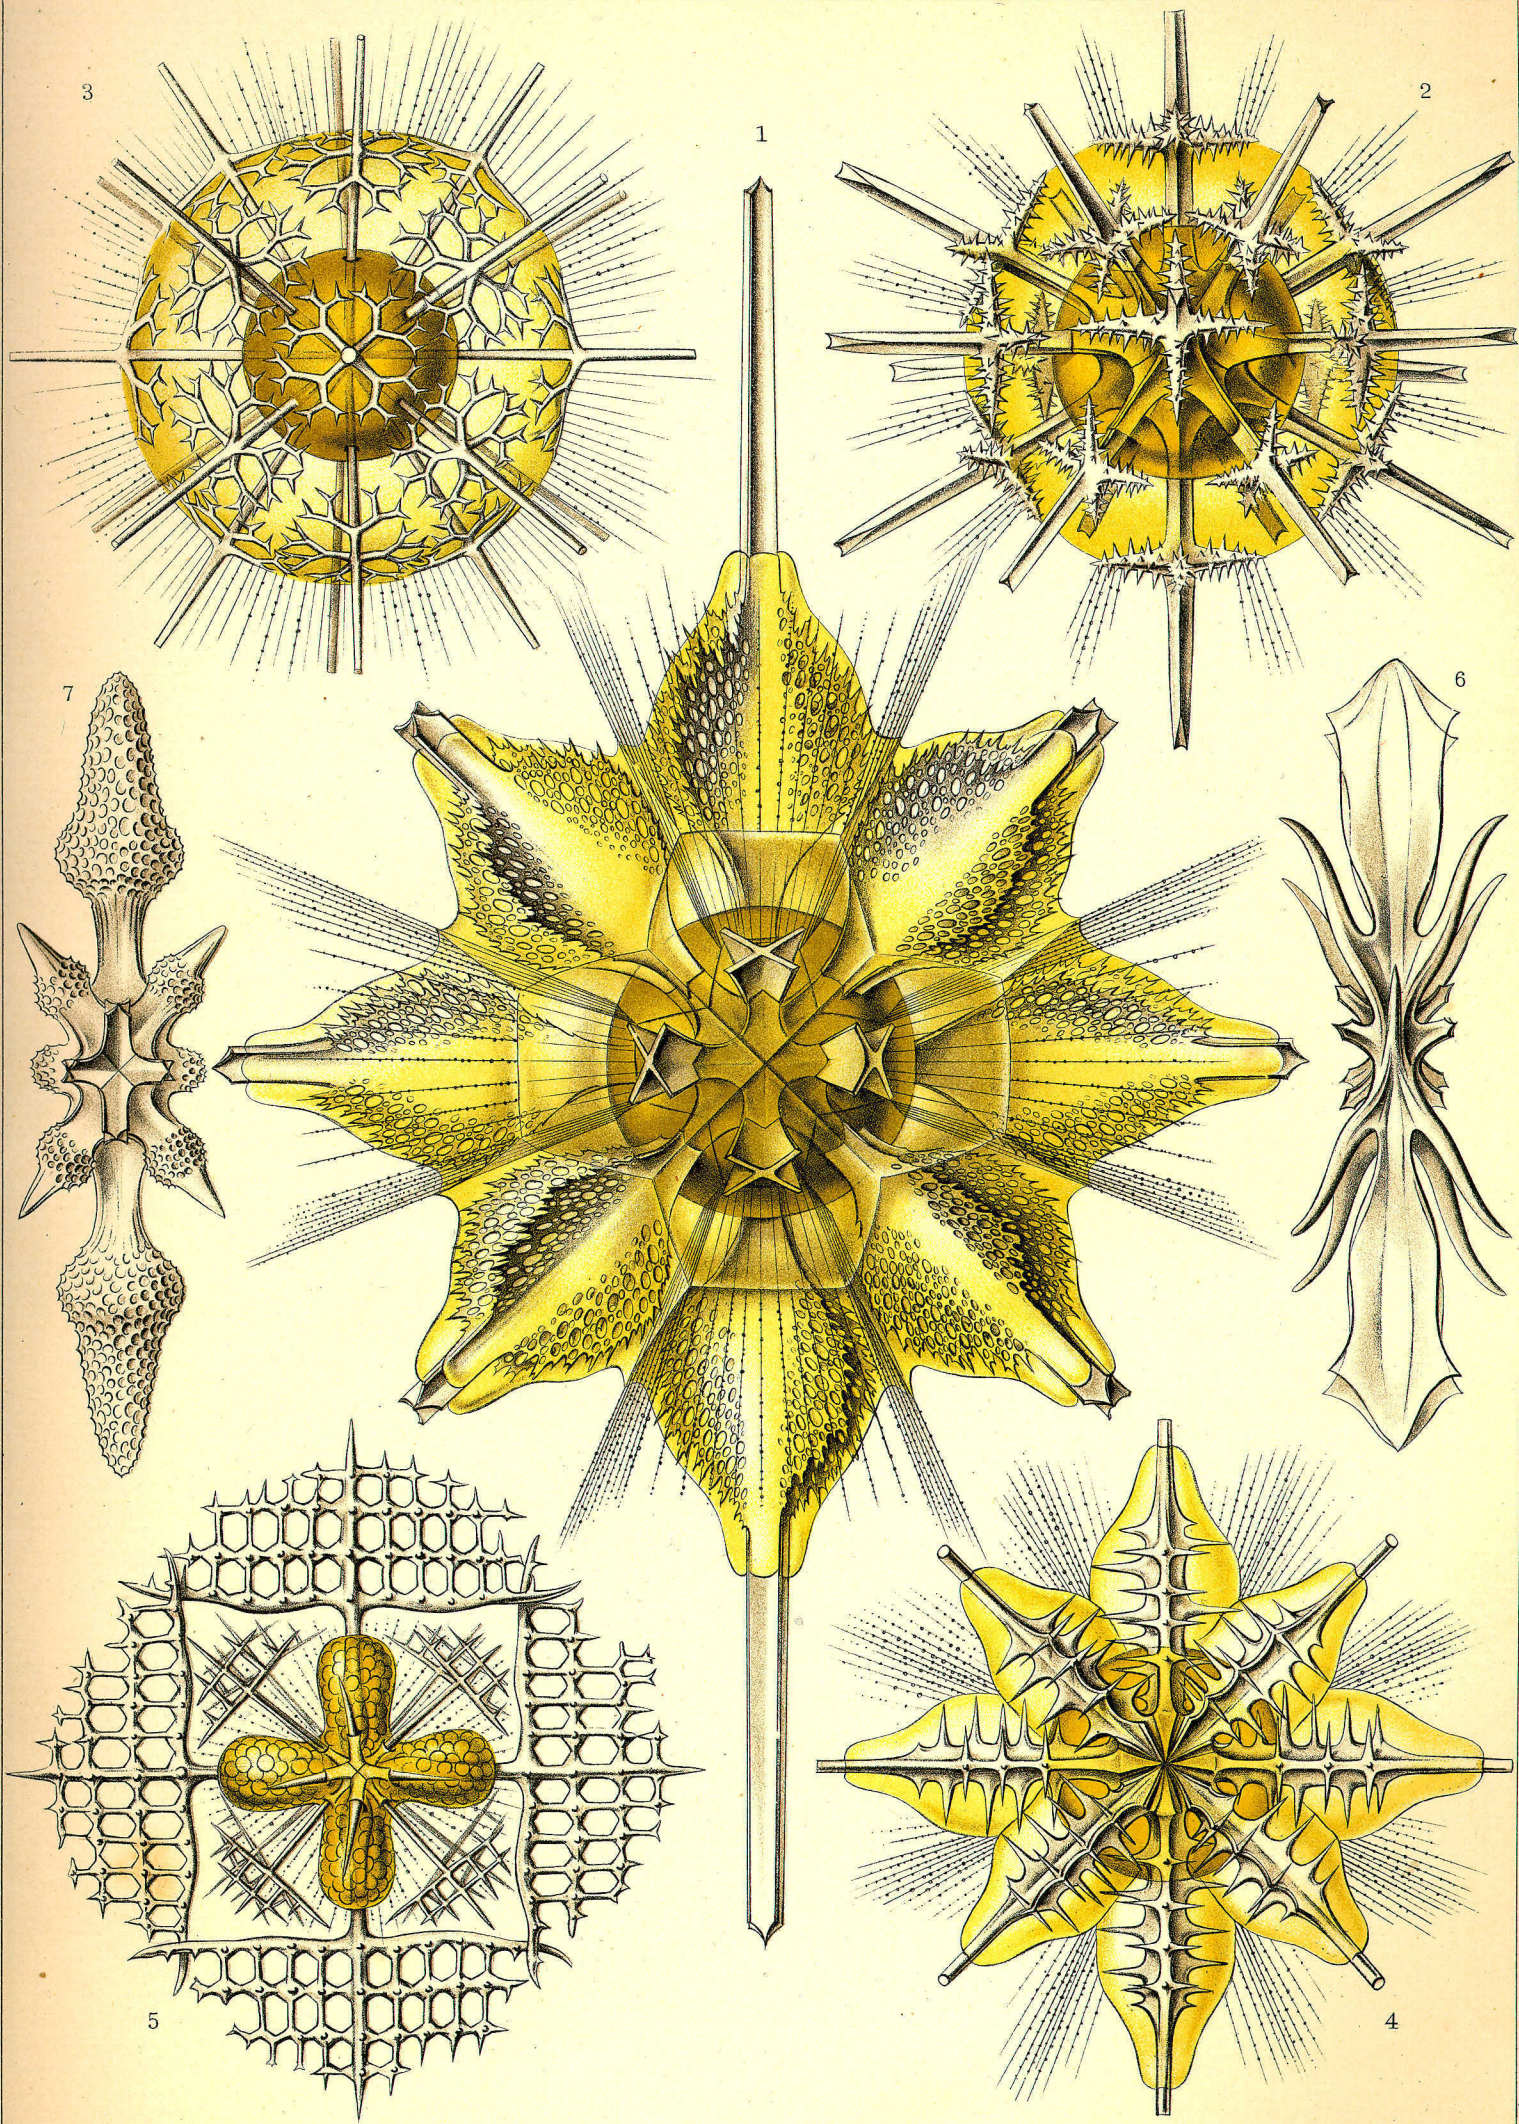

Discomedusae. — Scheibenquallen.

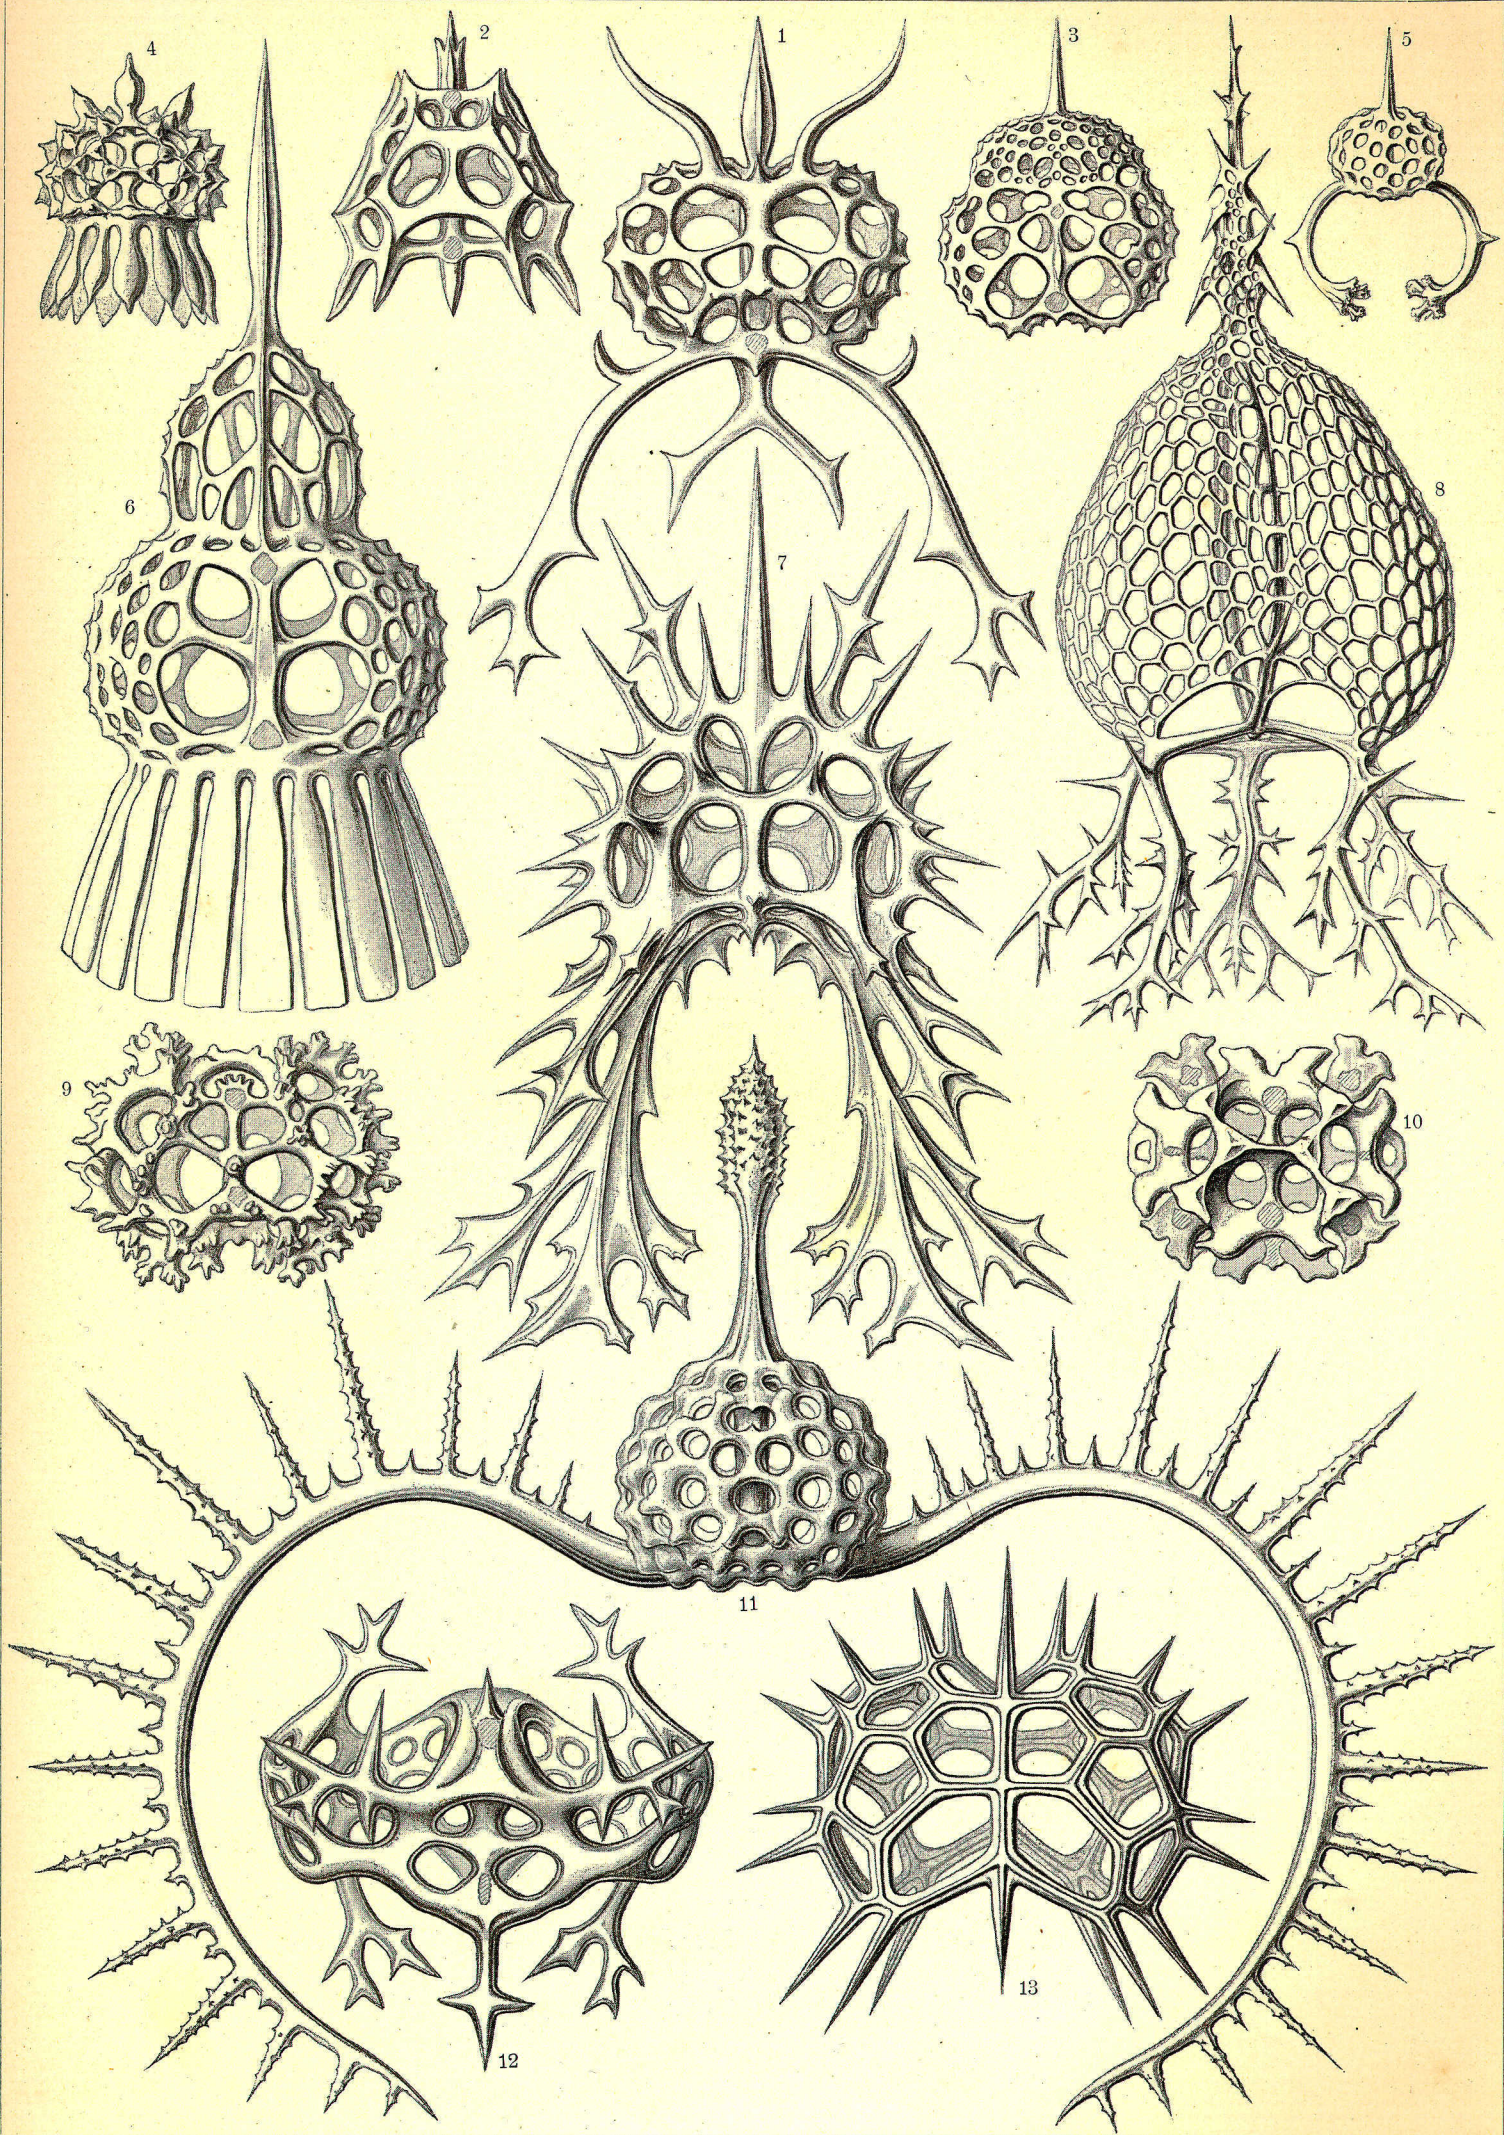

Pennatulida. — Federkorallen.

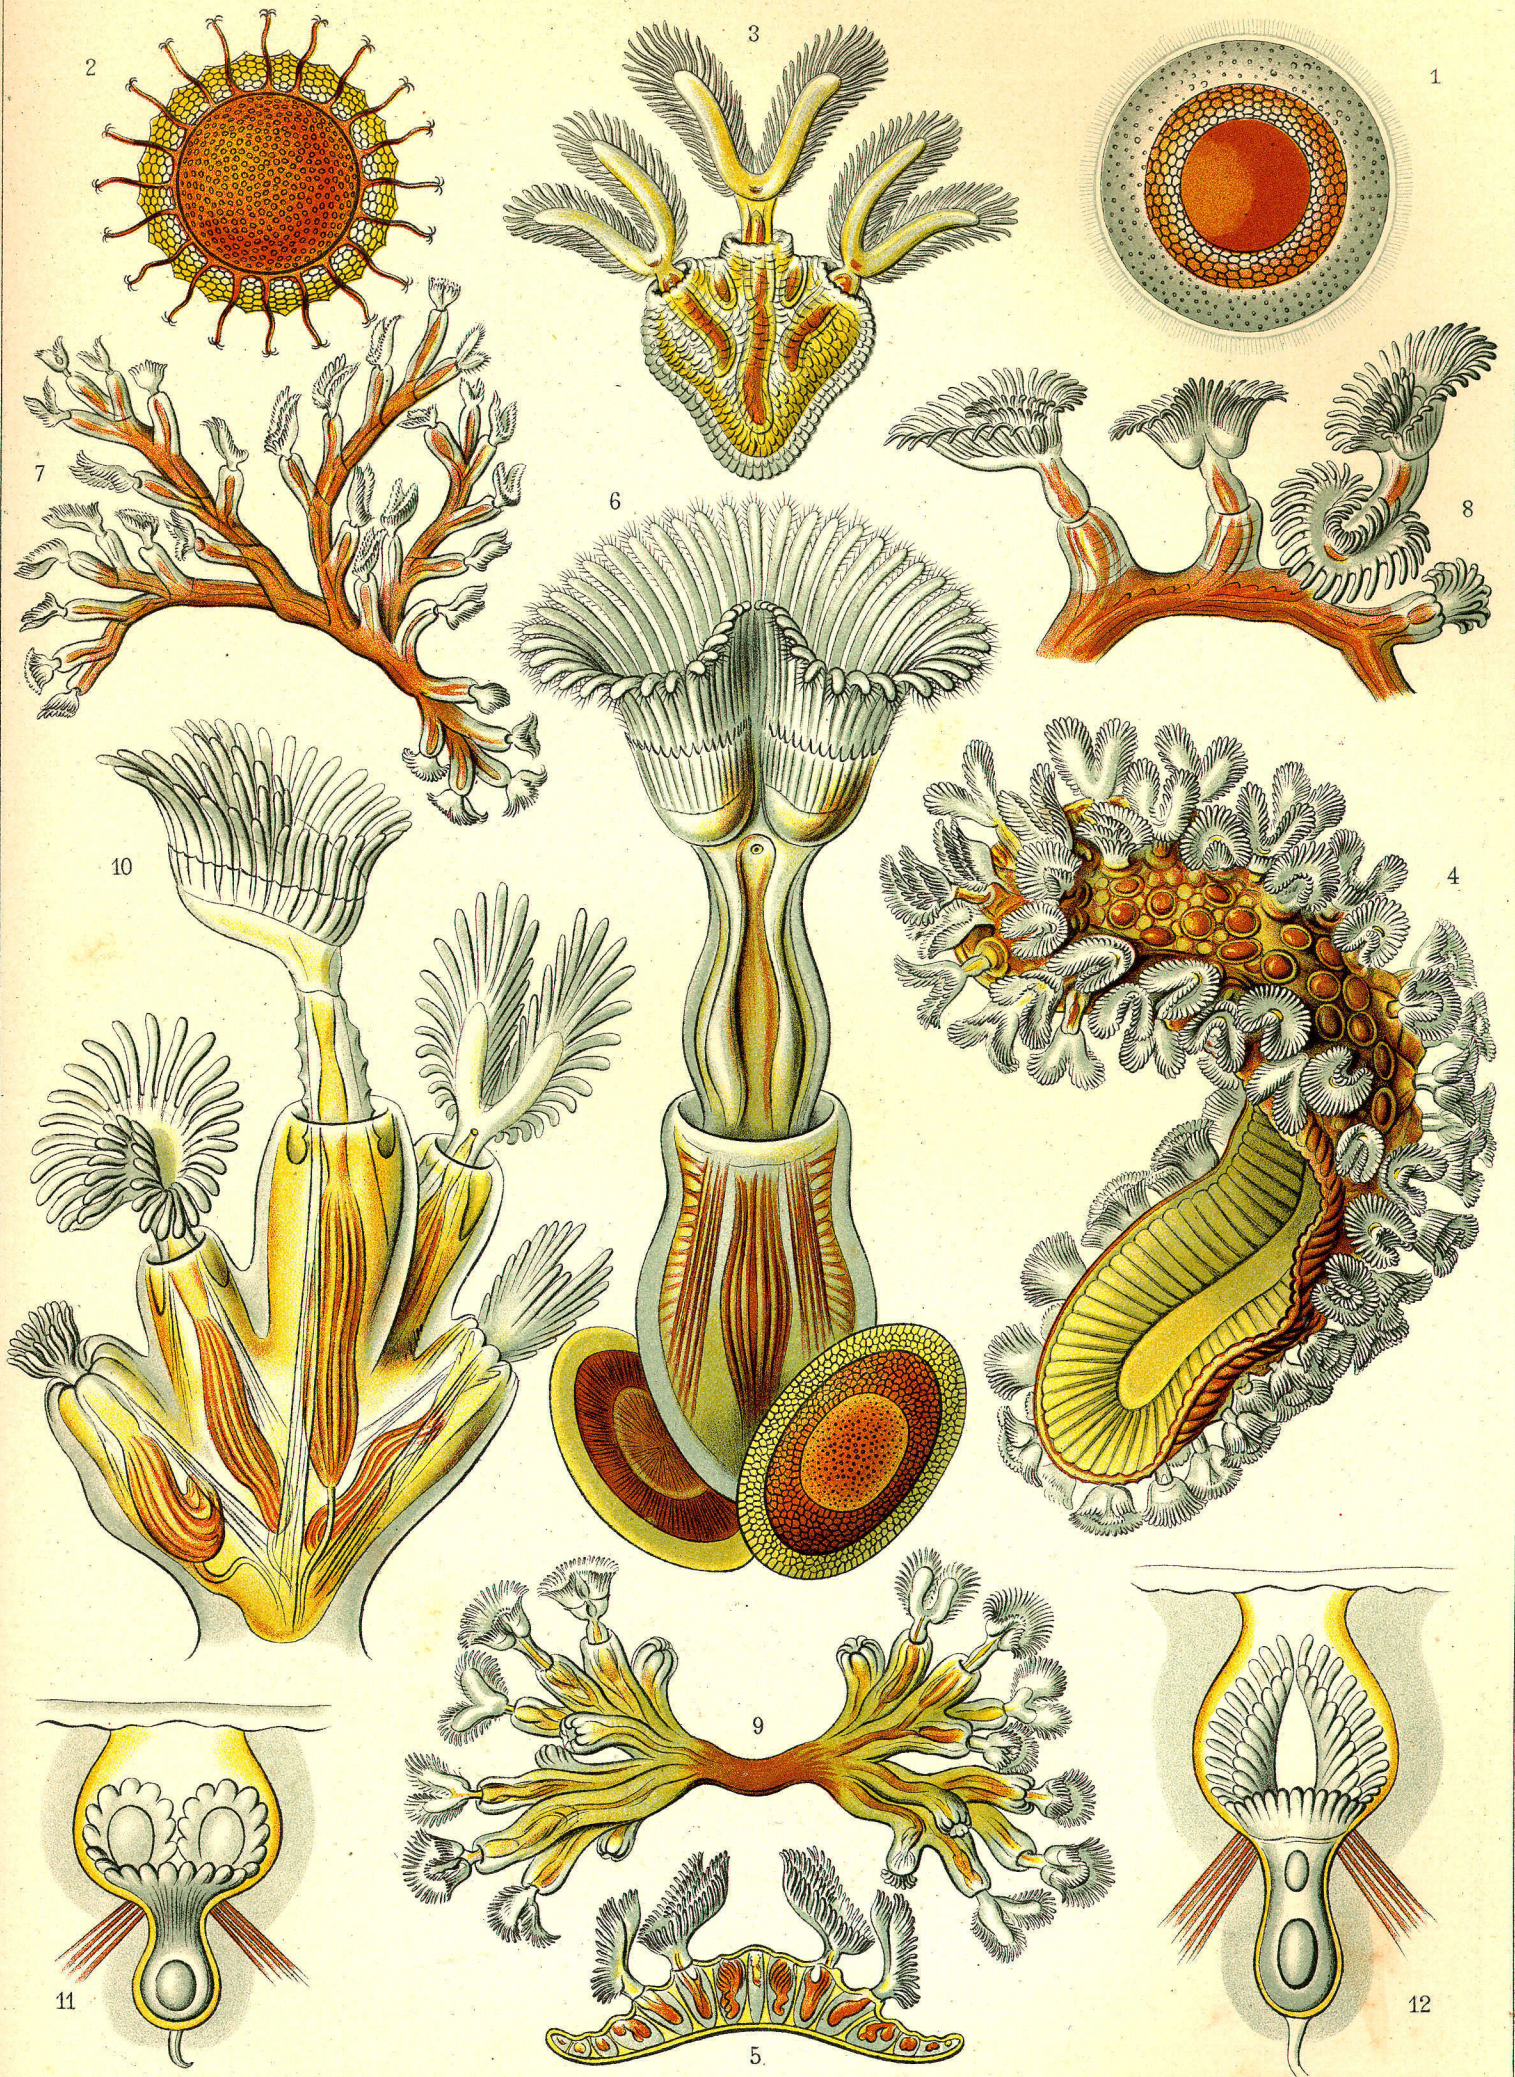

Crinoidea. — Palmensterne.

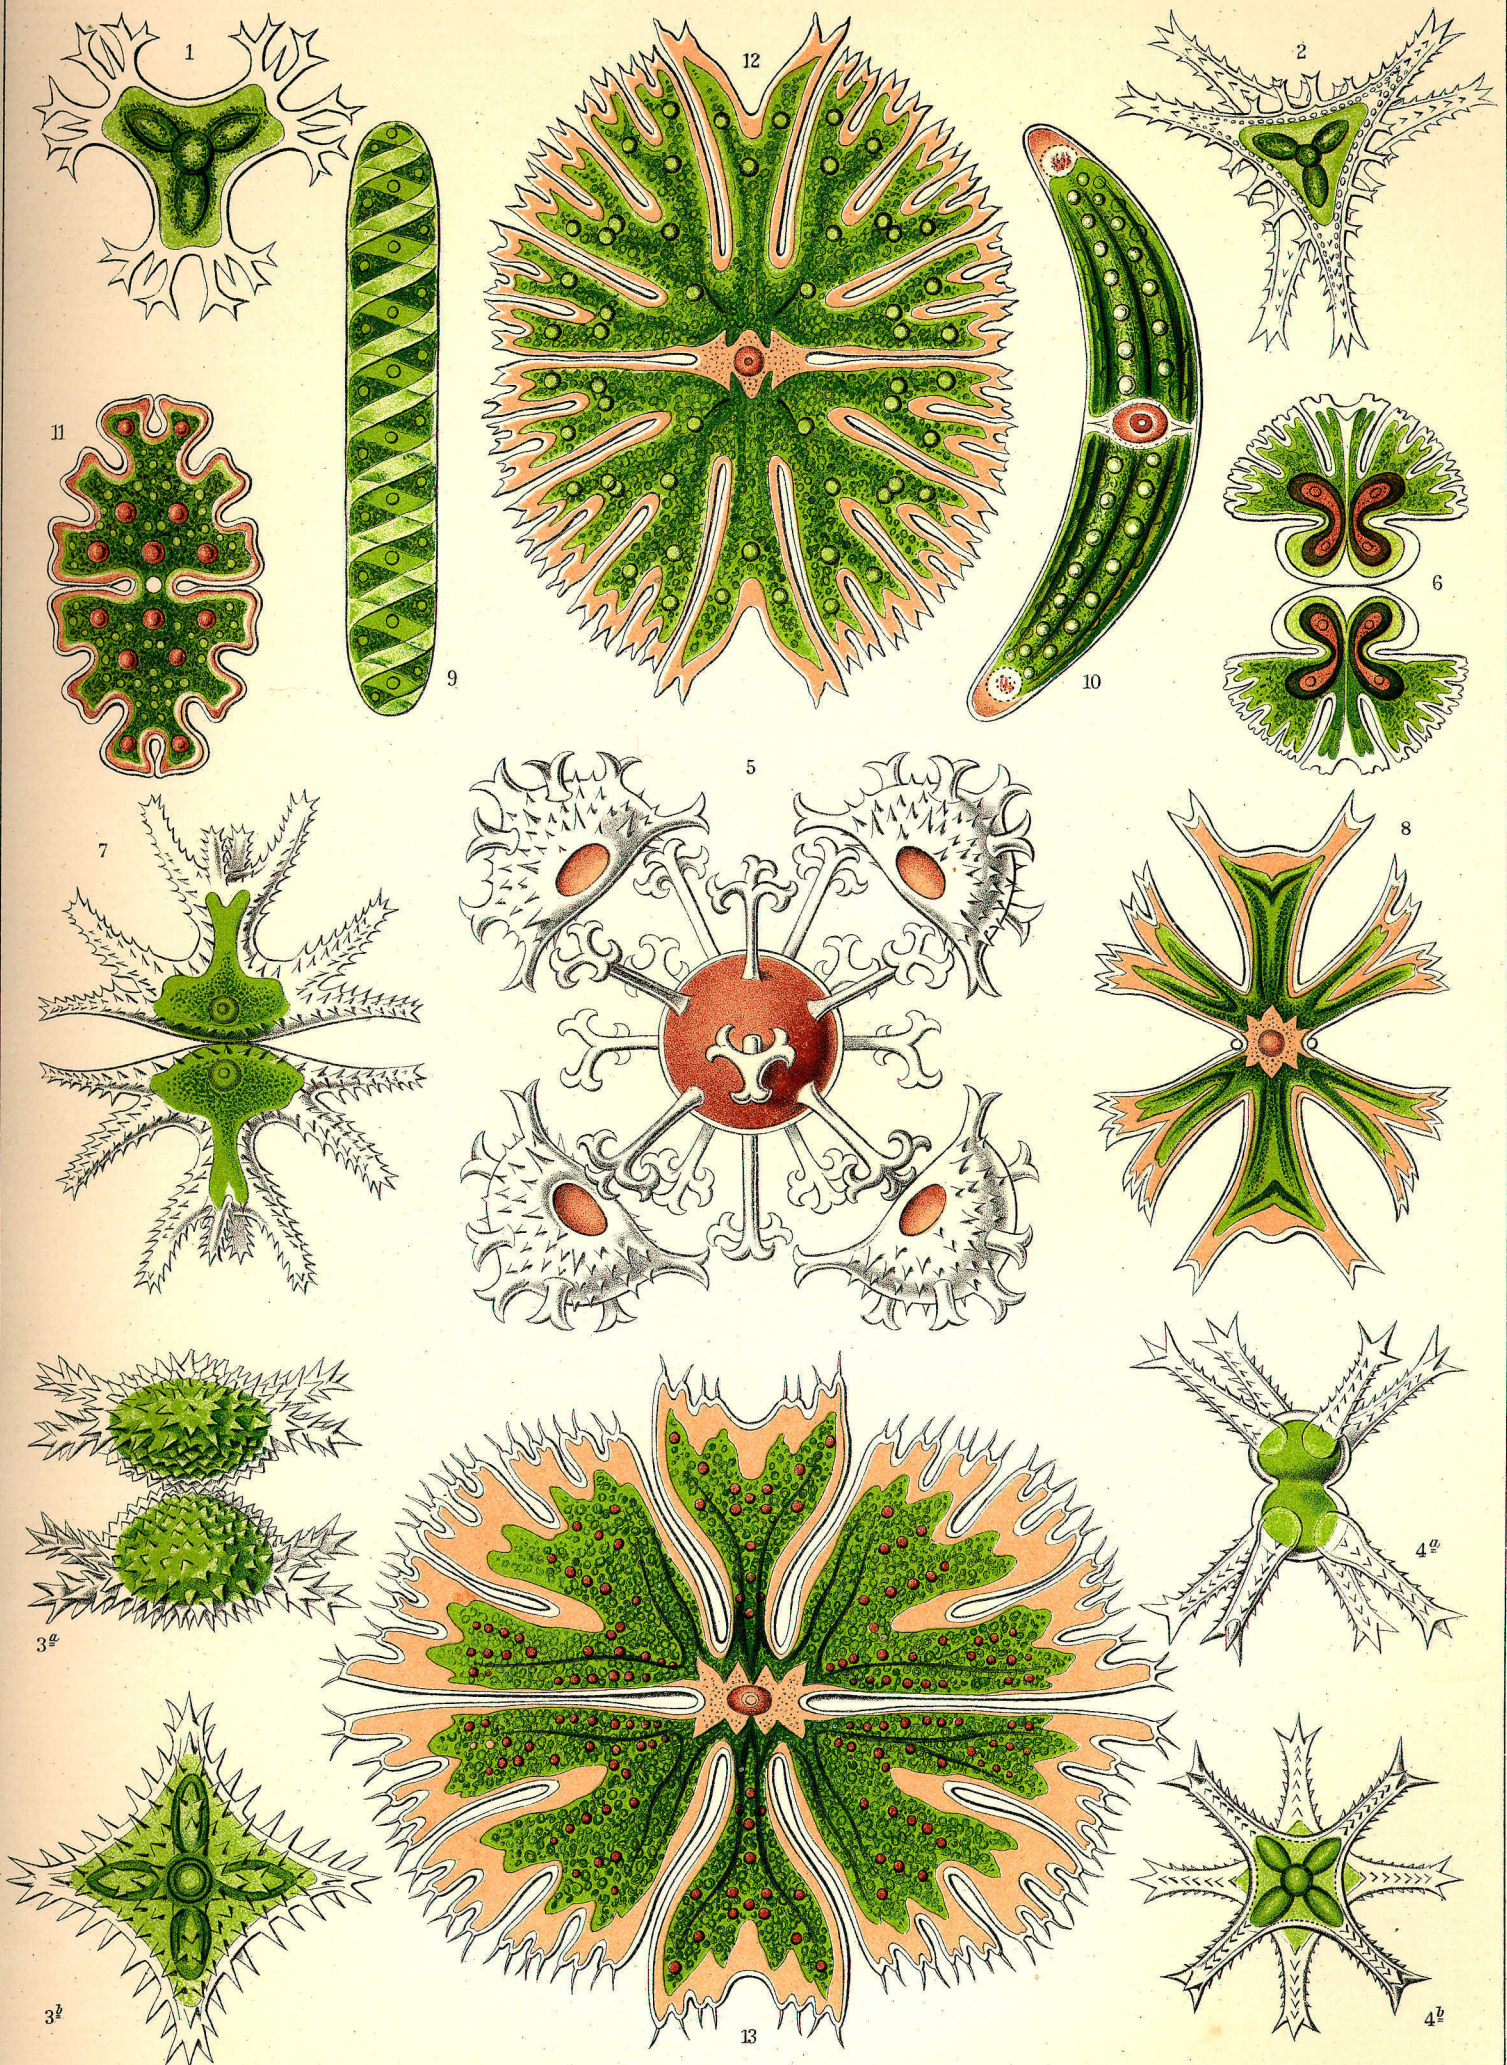

Acanthometra. — Stachelstrahllinge.

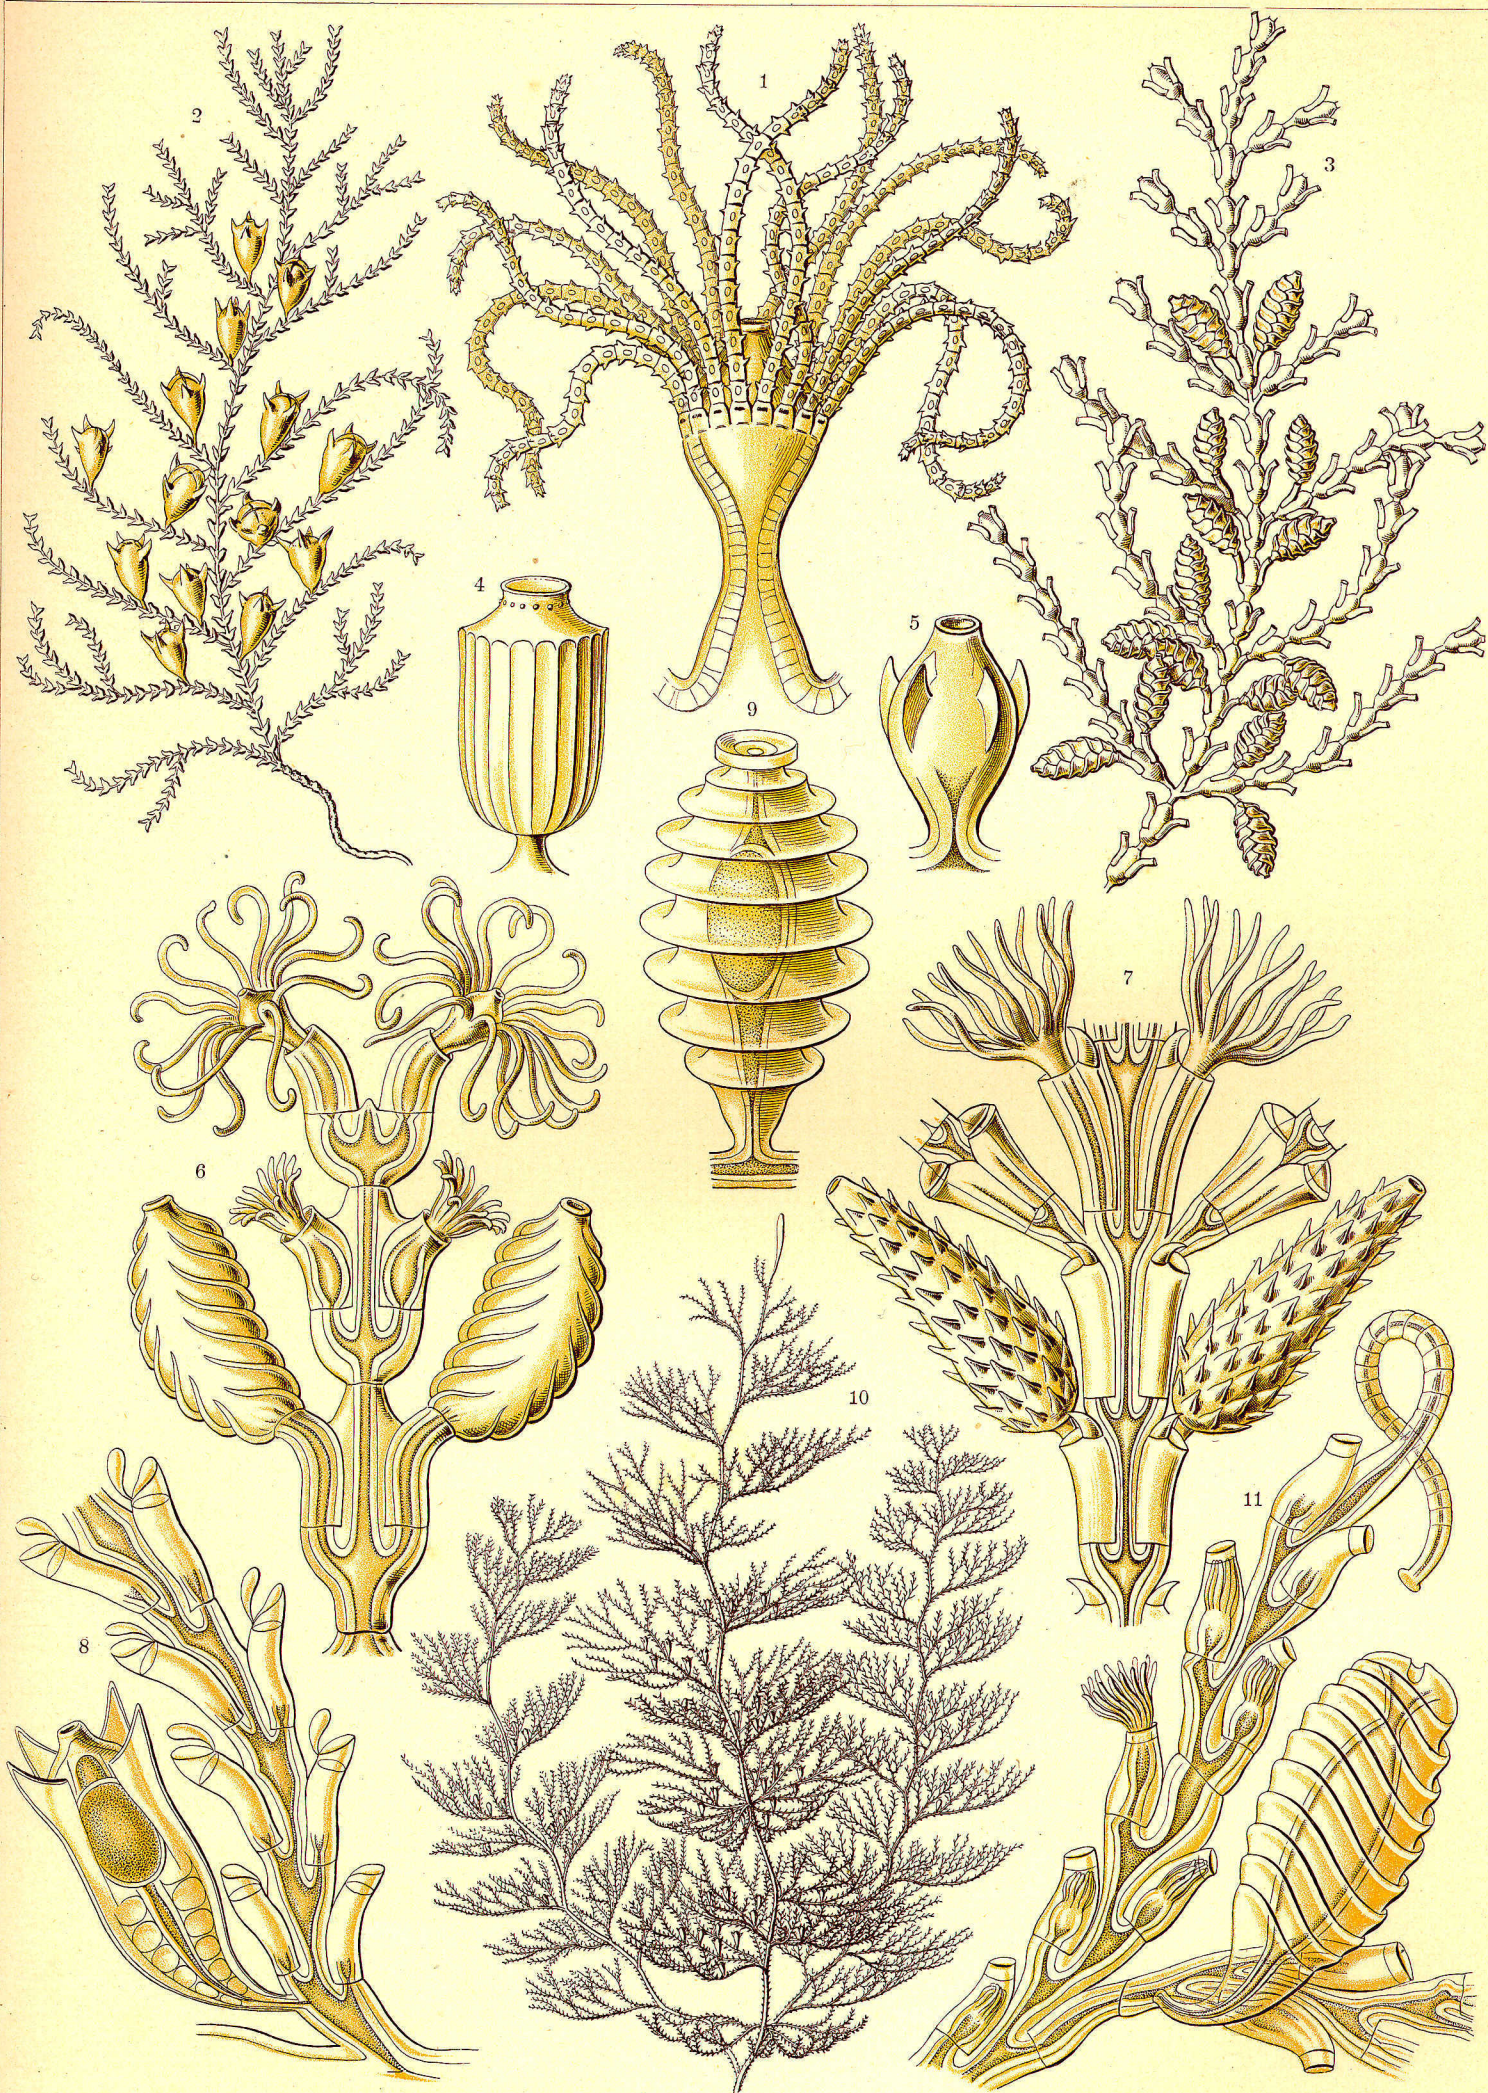

Spyroidea. — Nüßchenstrahllinge.

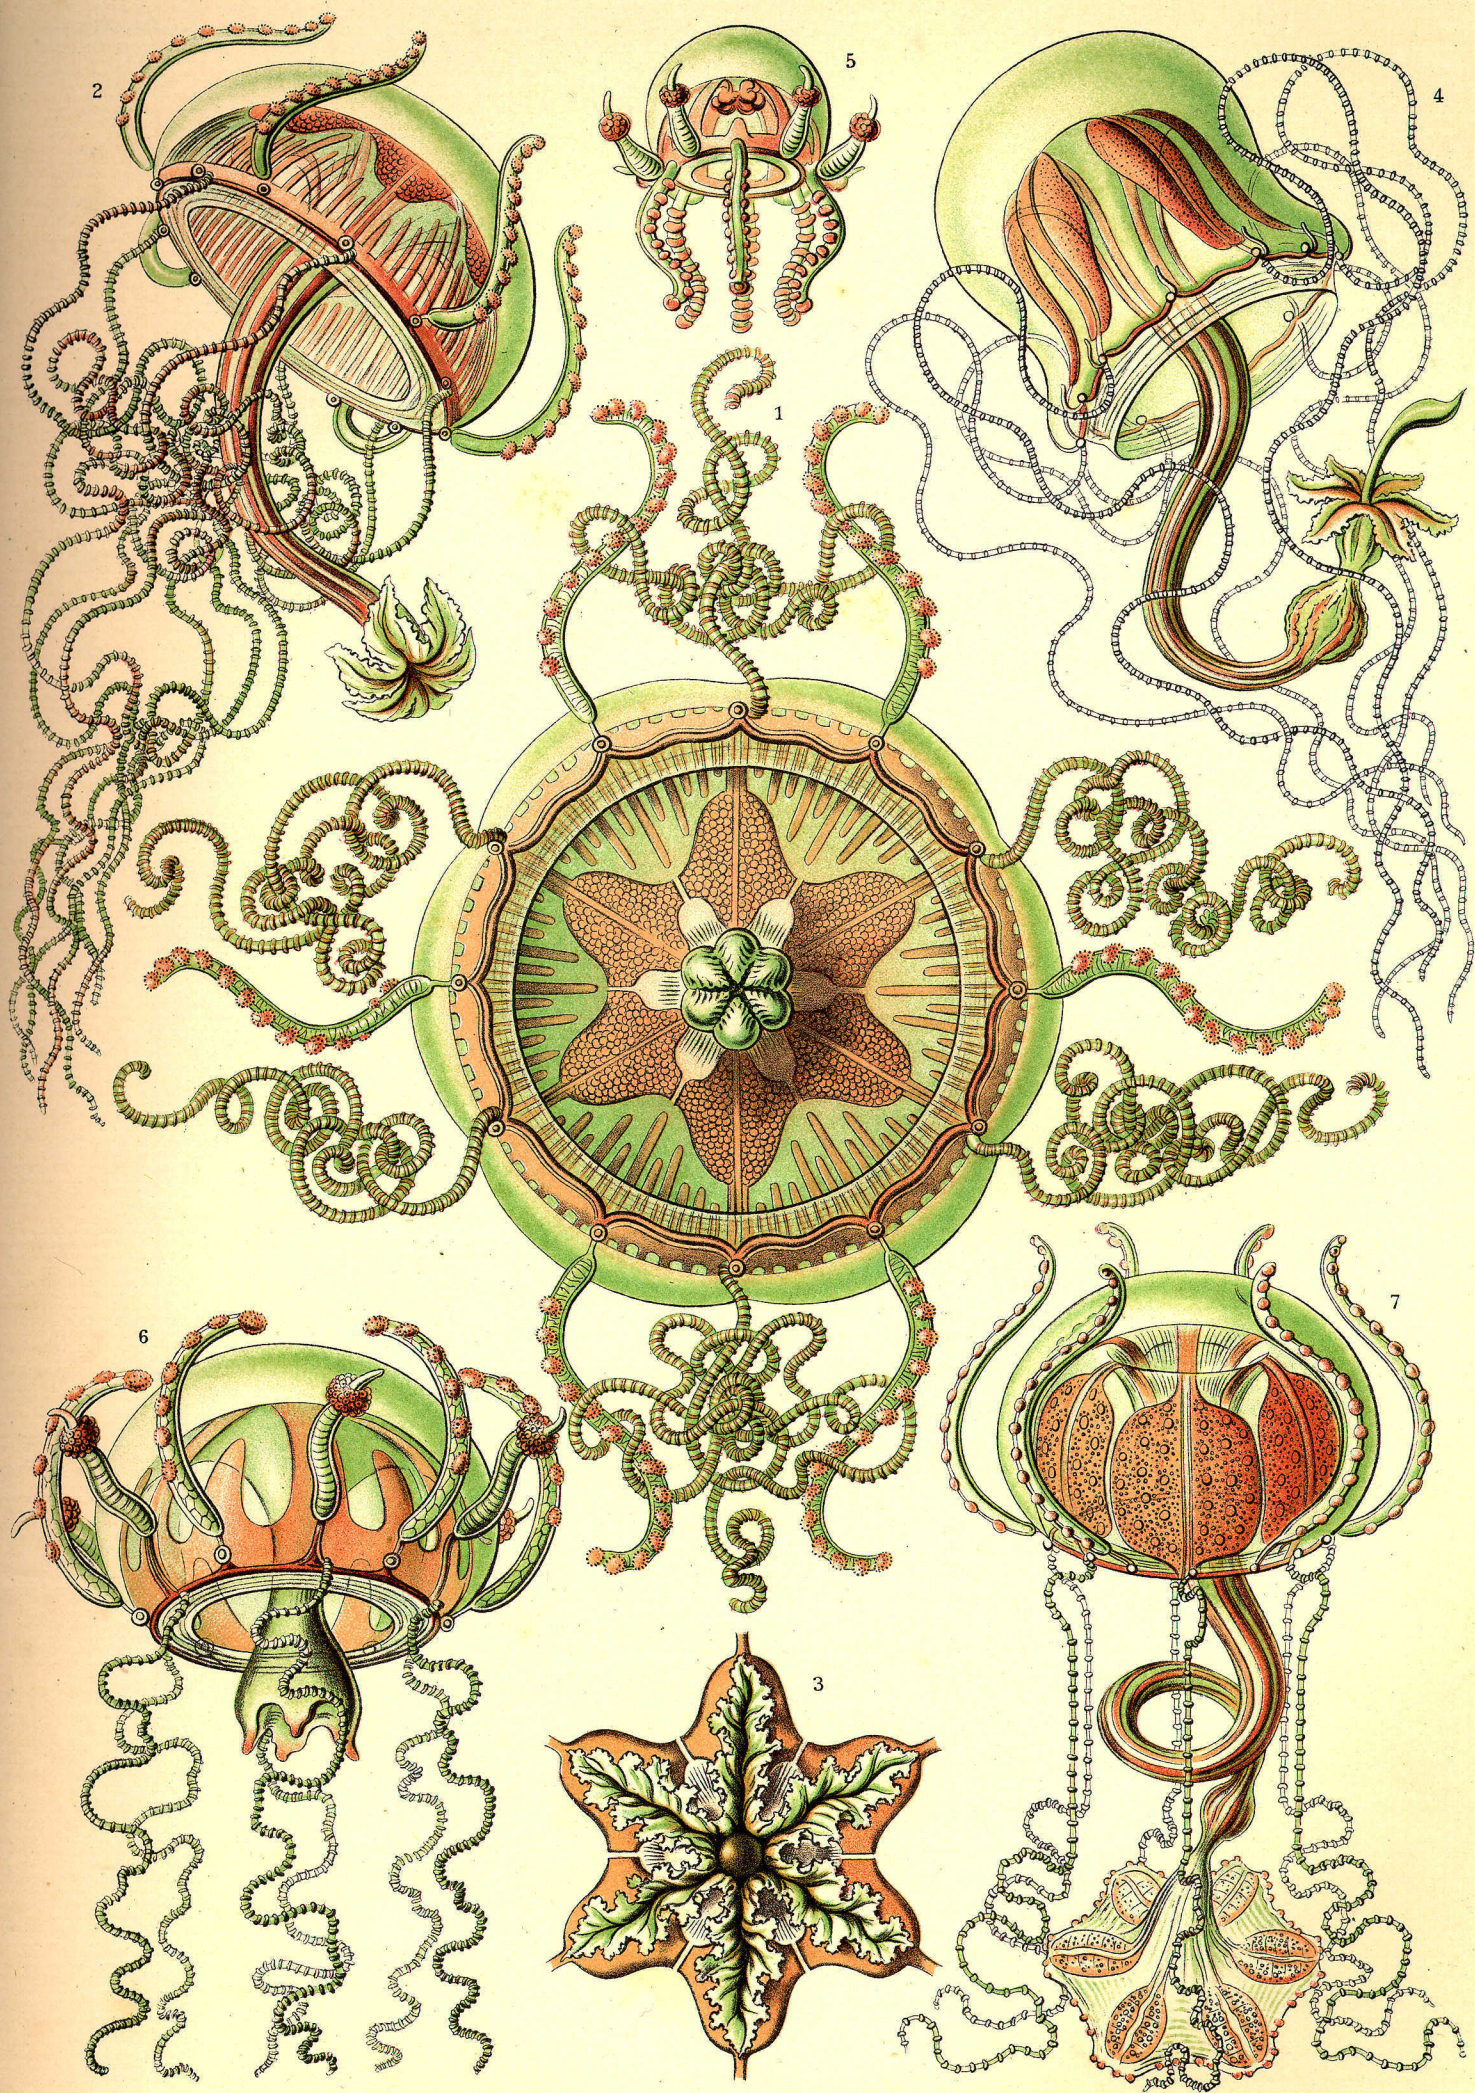

Bryozoa. — Moostiere.

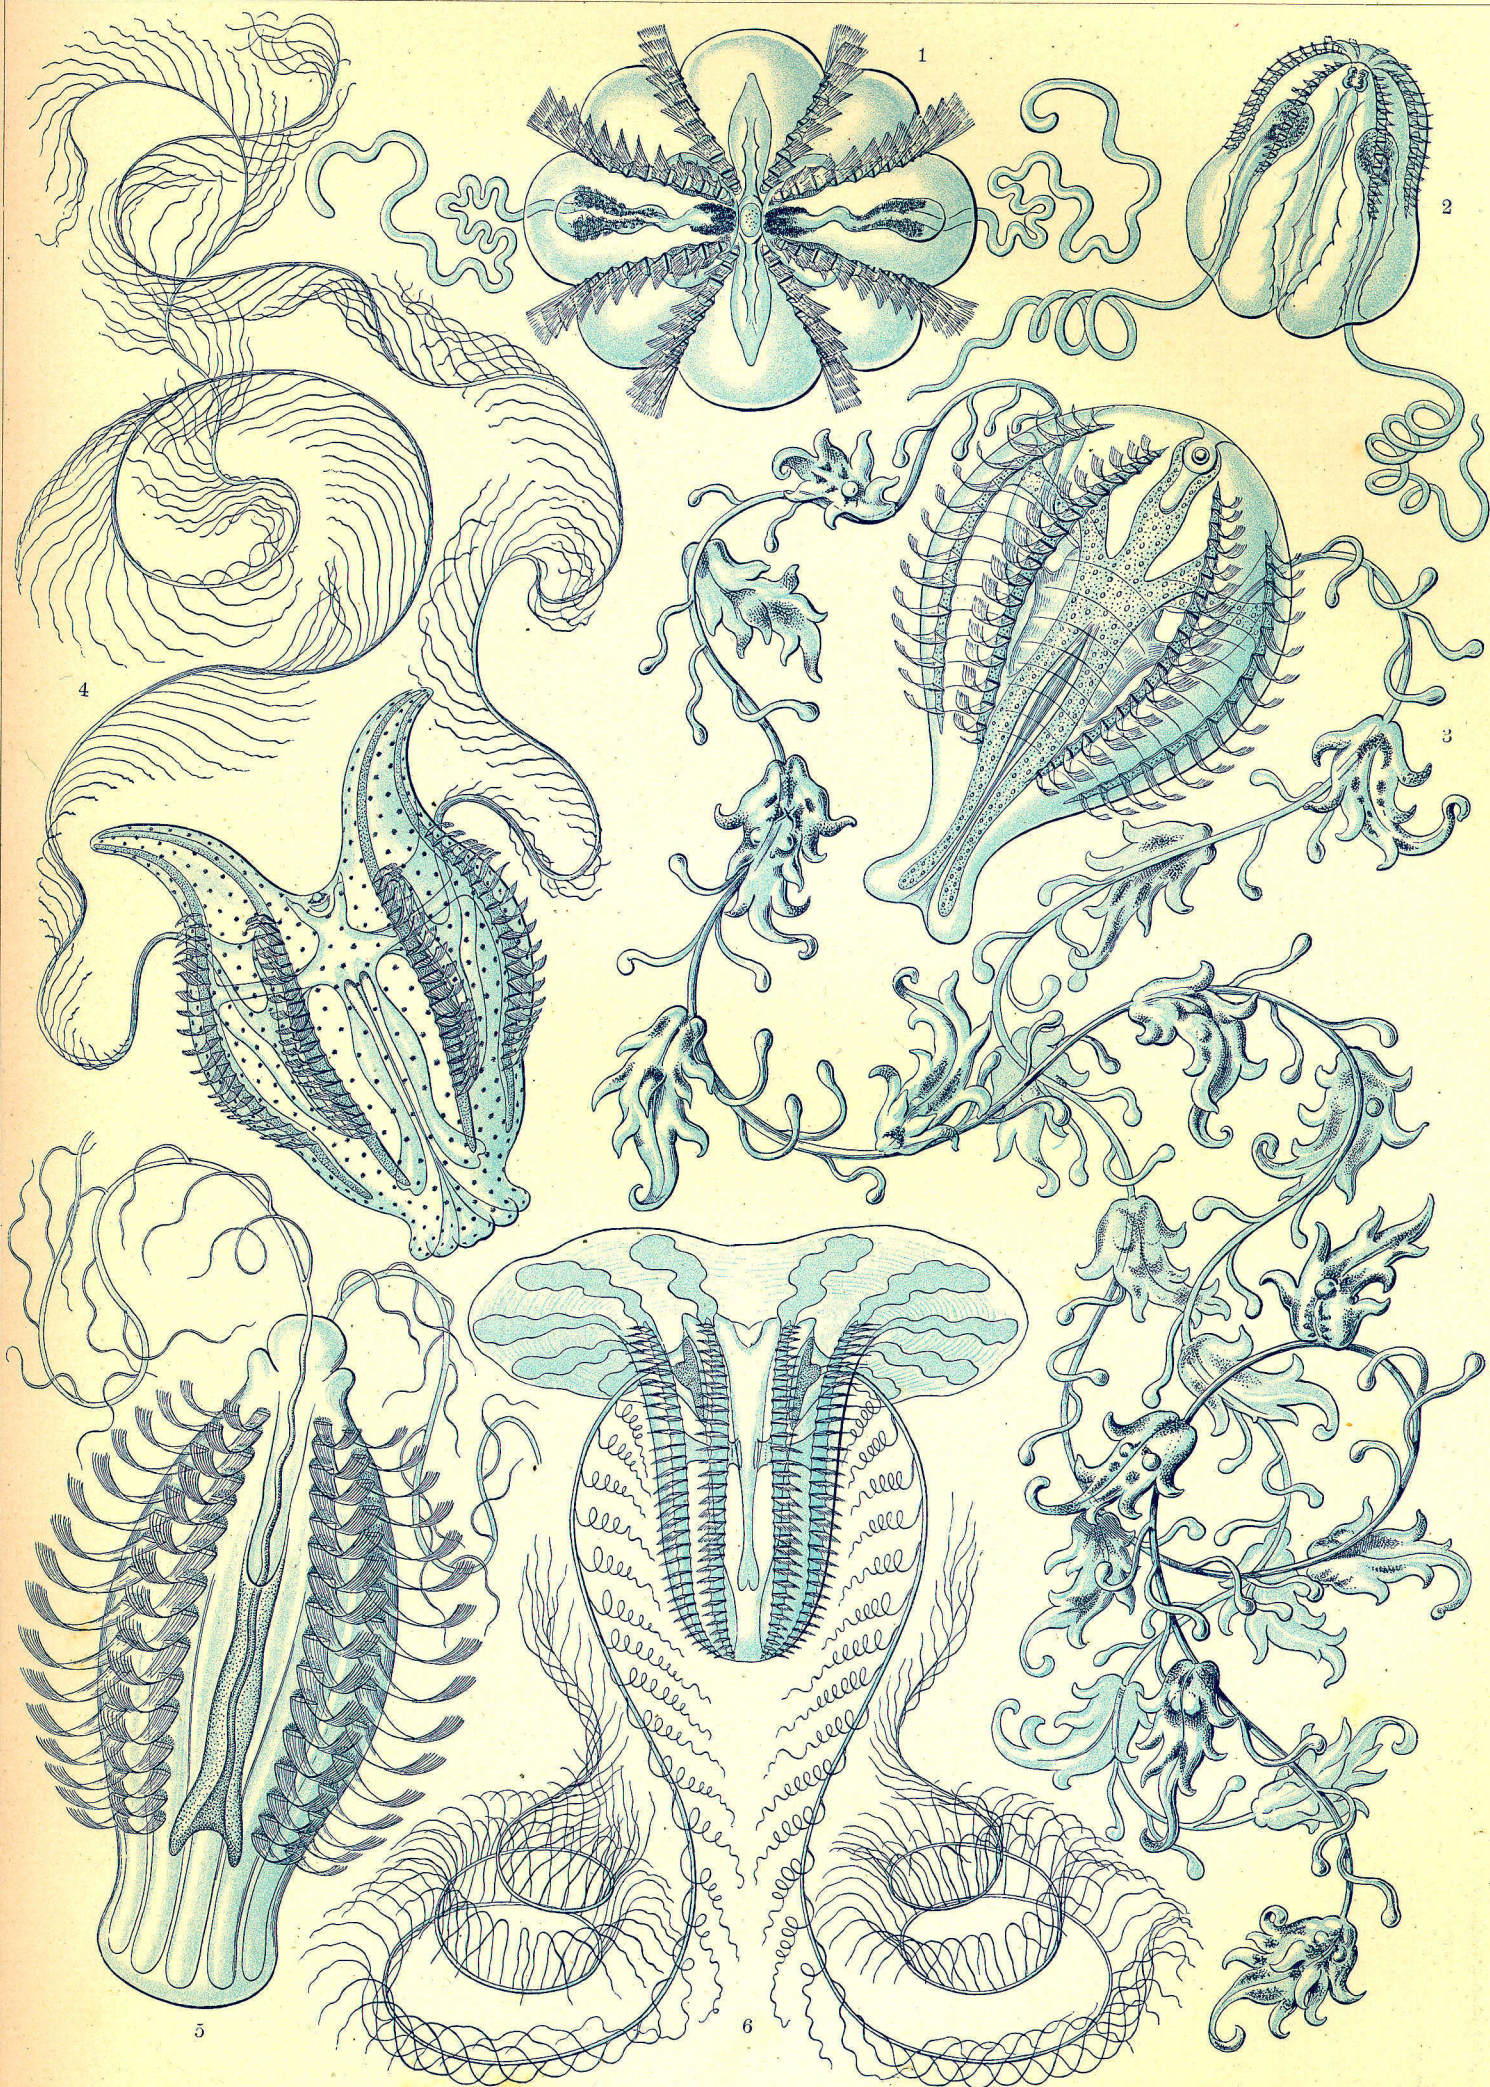

Sertulariae. — Feißenpolypen.

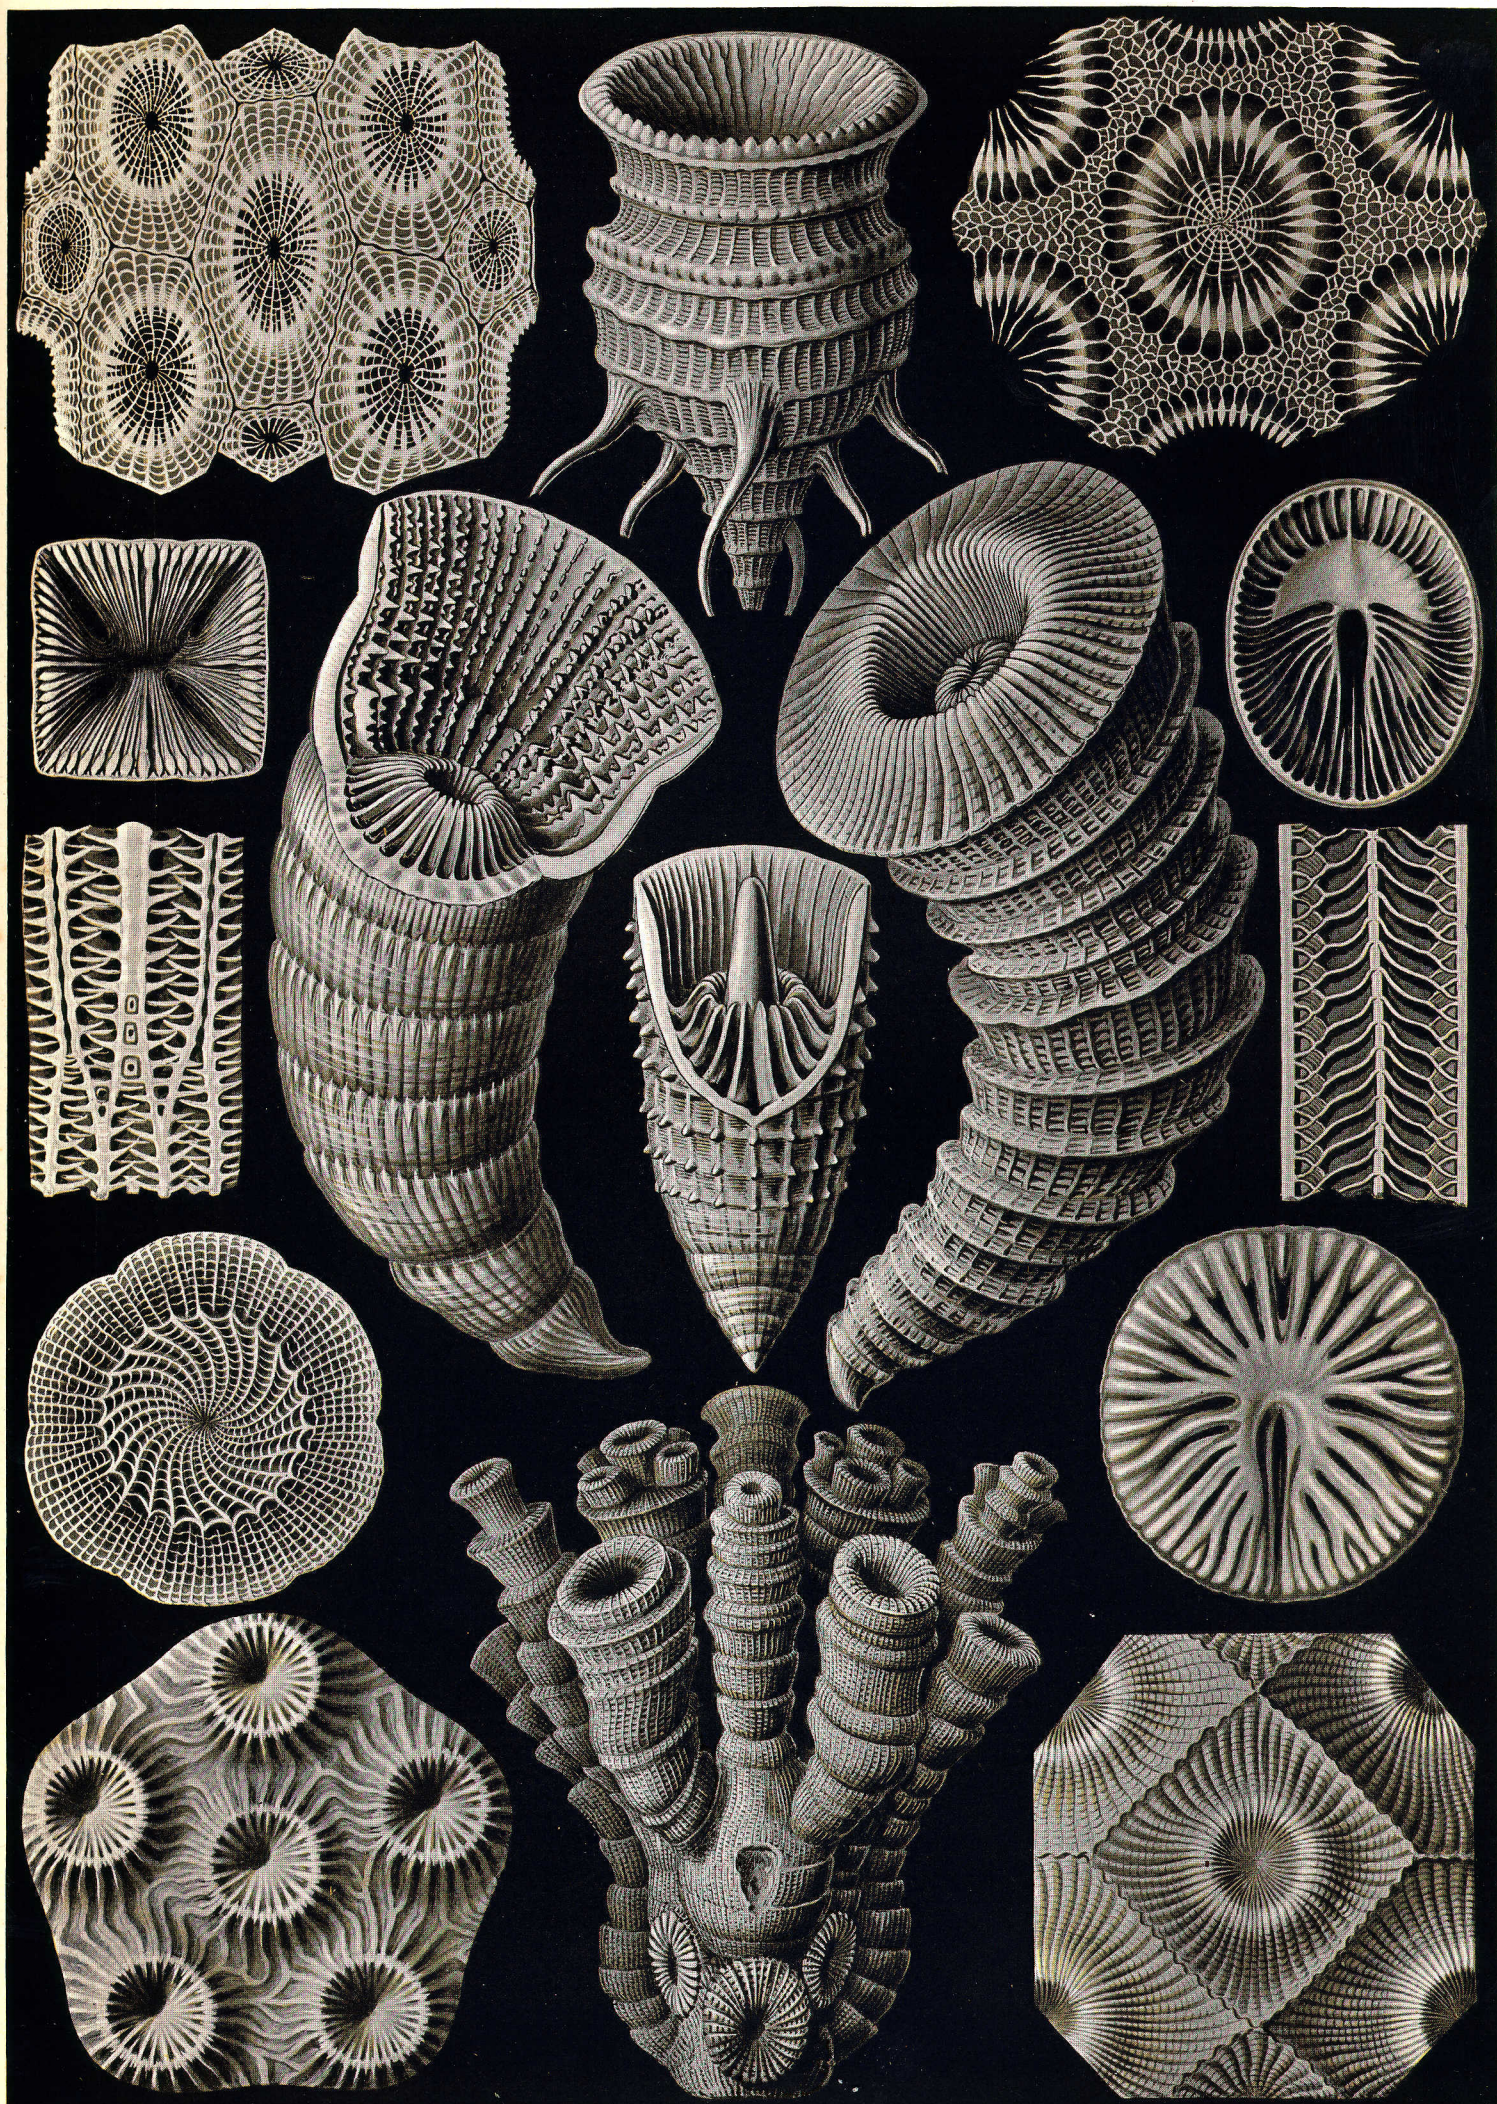

Trachomedusae. — Kolbenquassen.

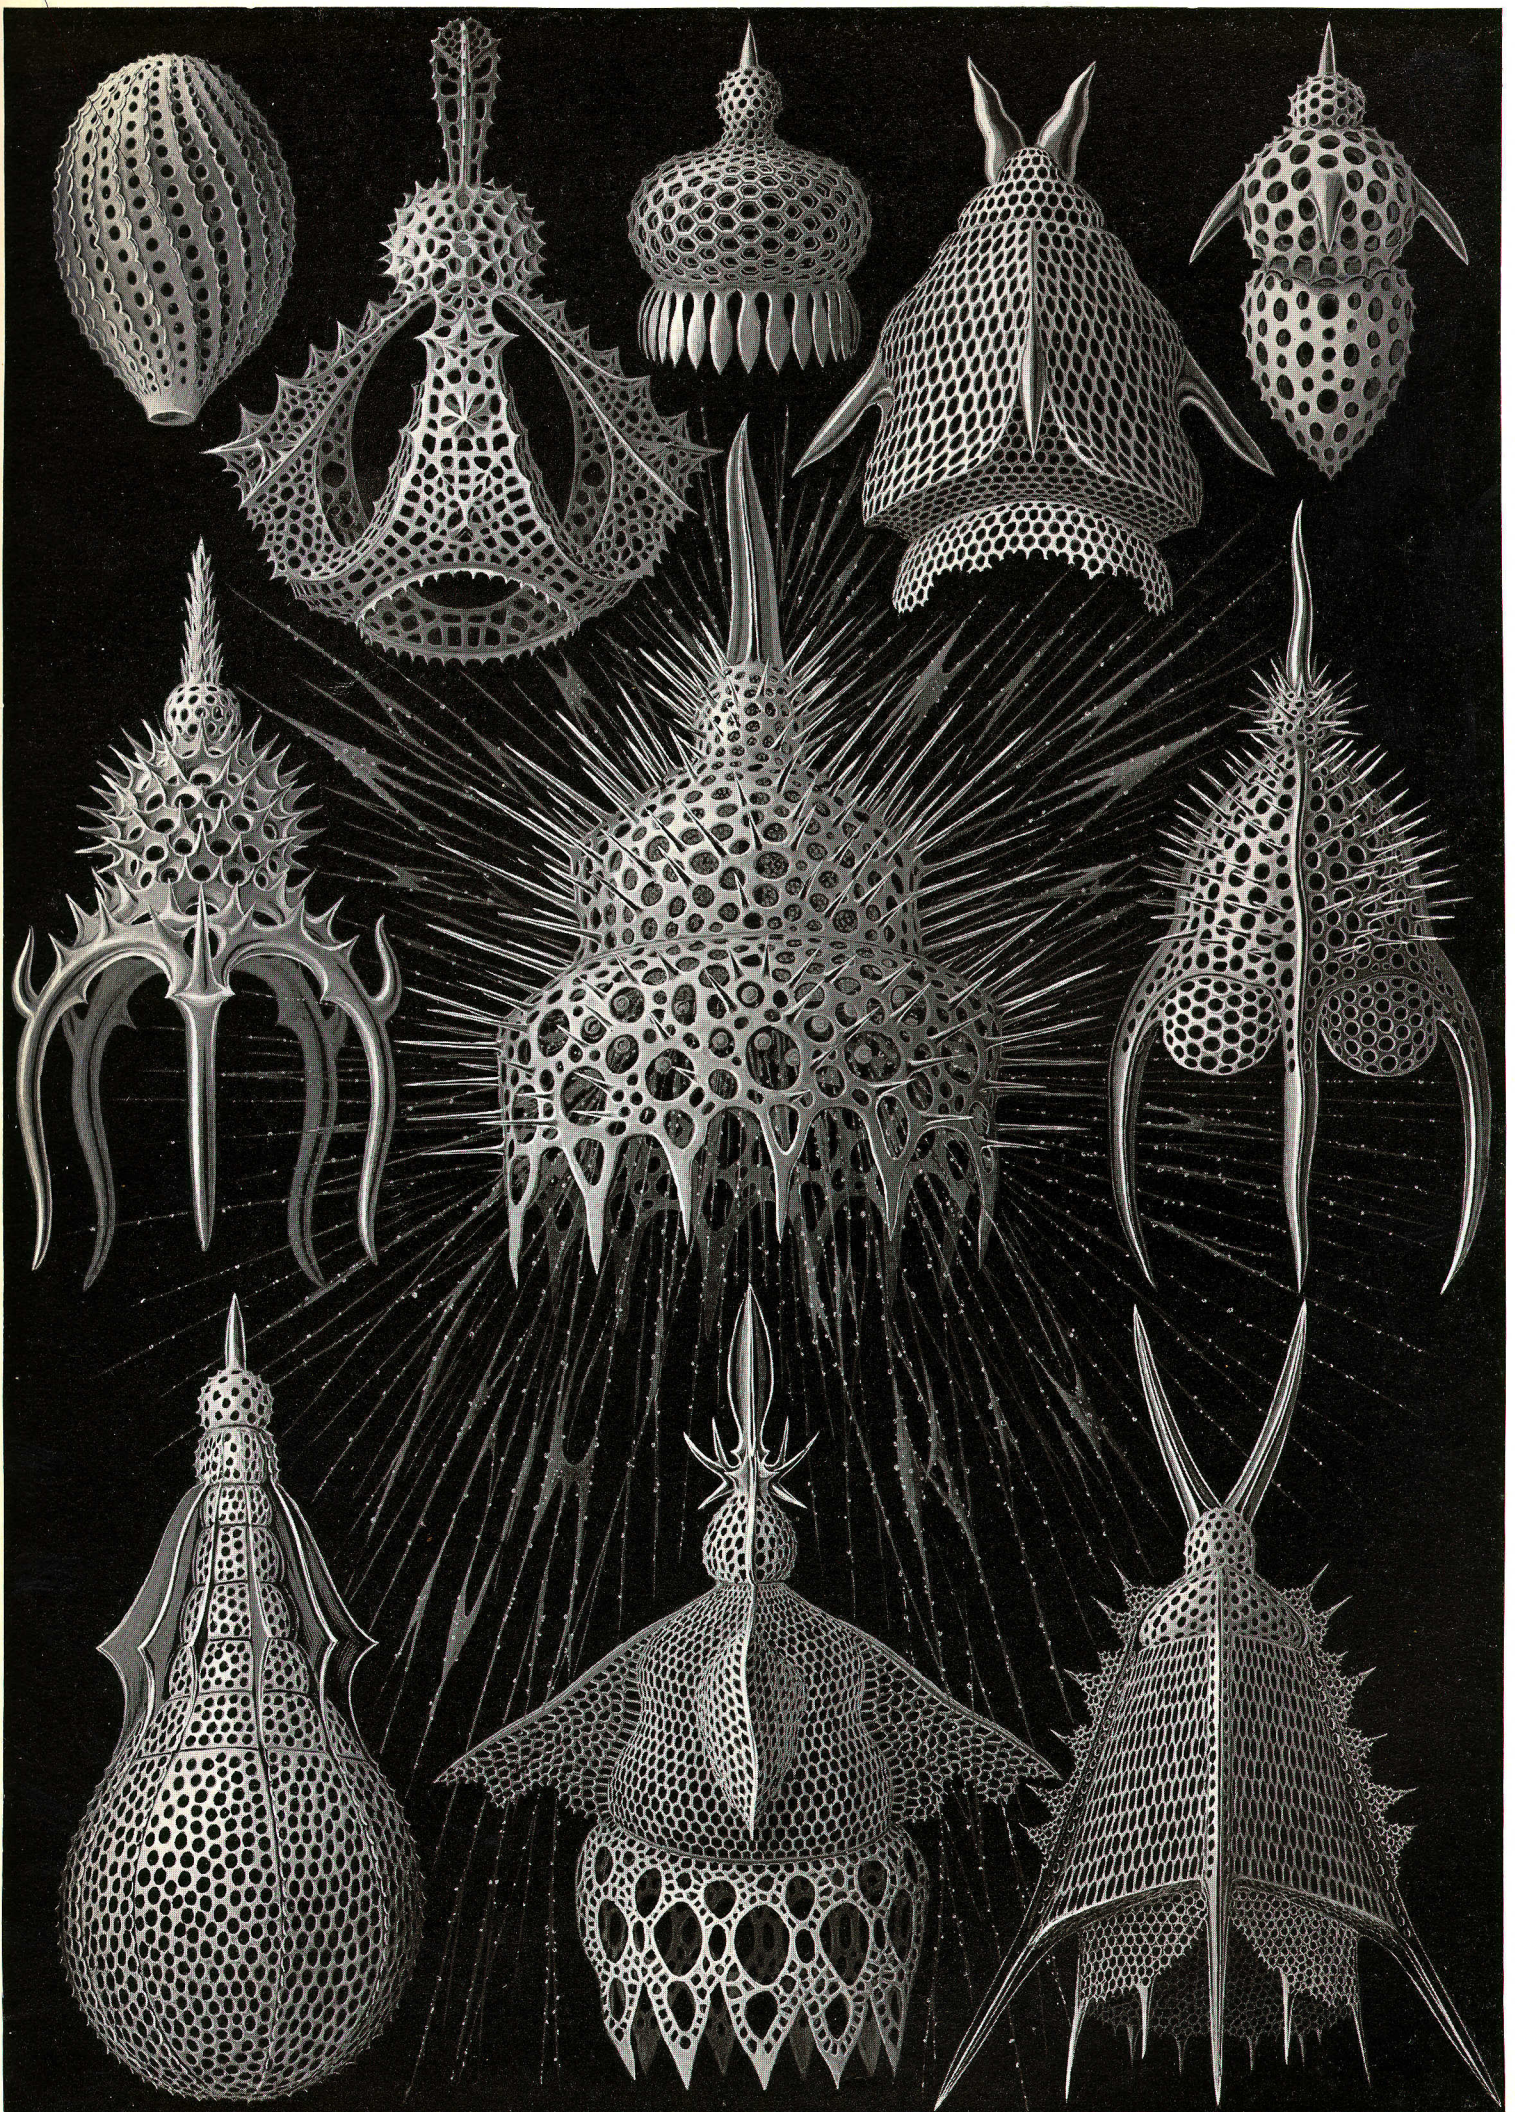

Discomedusae. — Scheibenquassen.

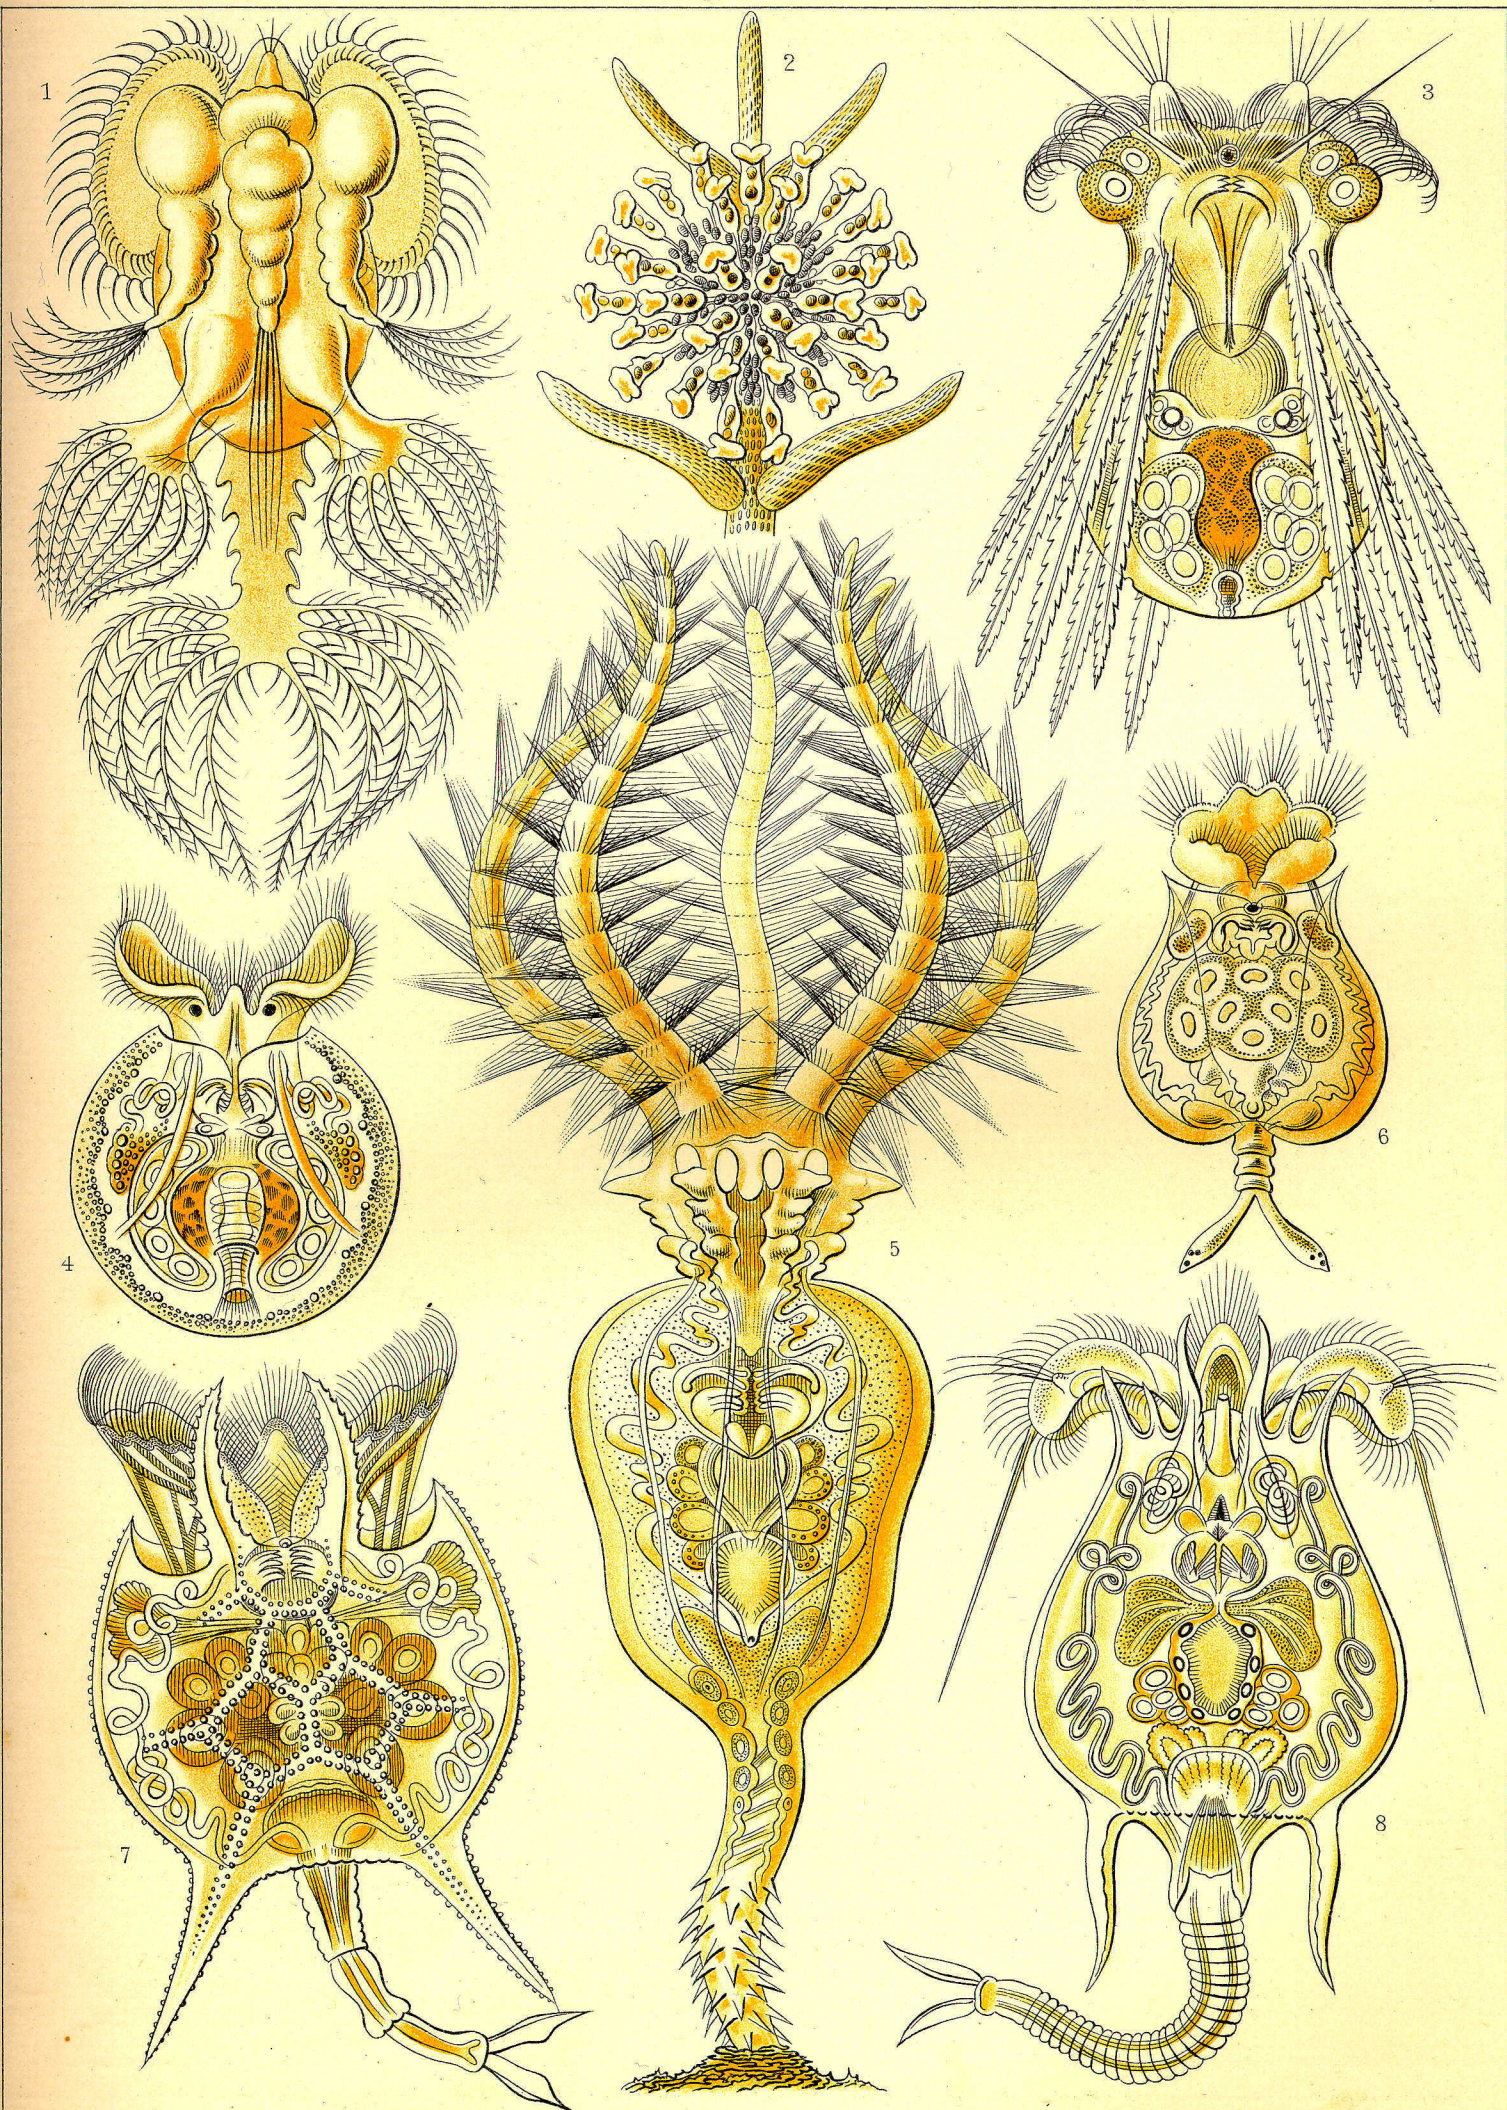

Tetracoralla. — Vierstrahlige Sternkorallen.

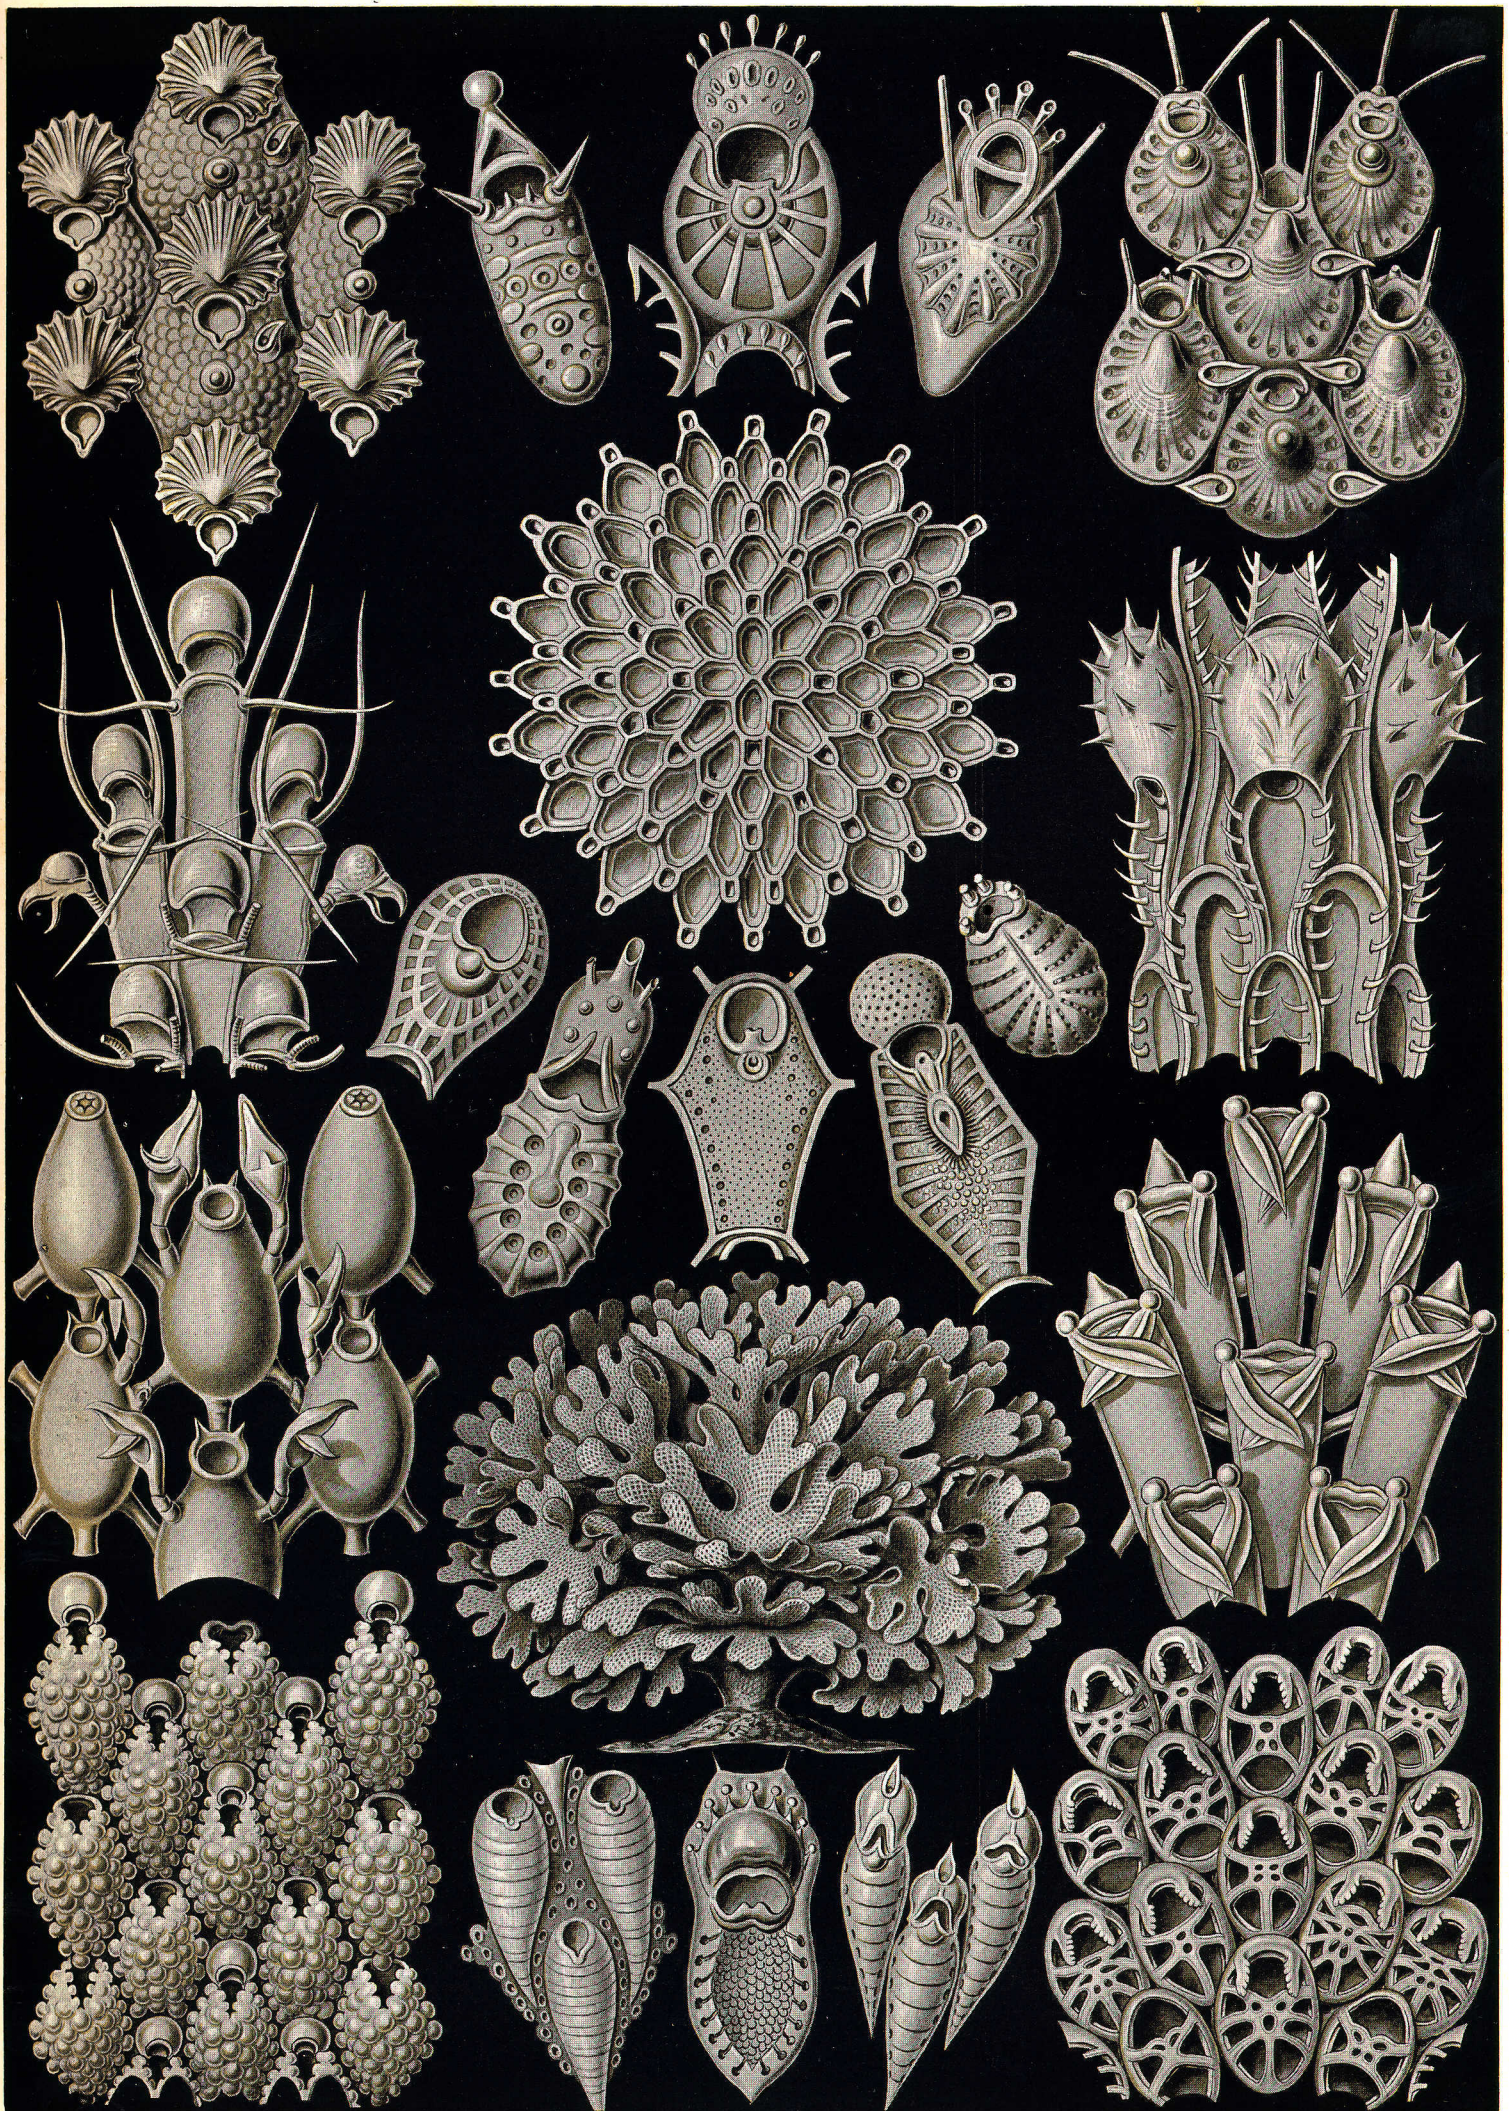

Echinidea. — Igelsterne.

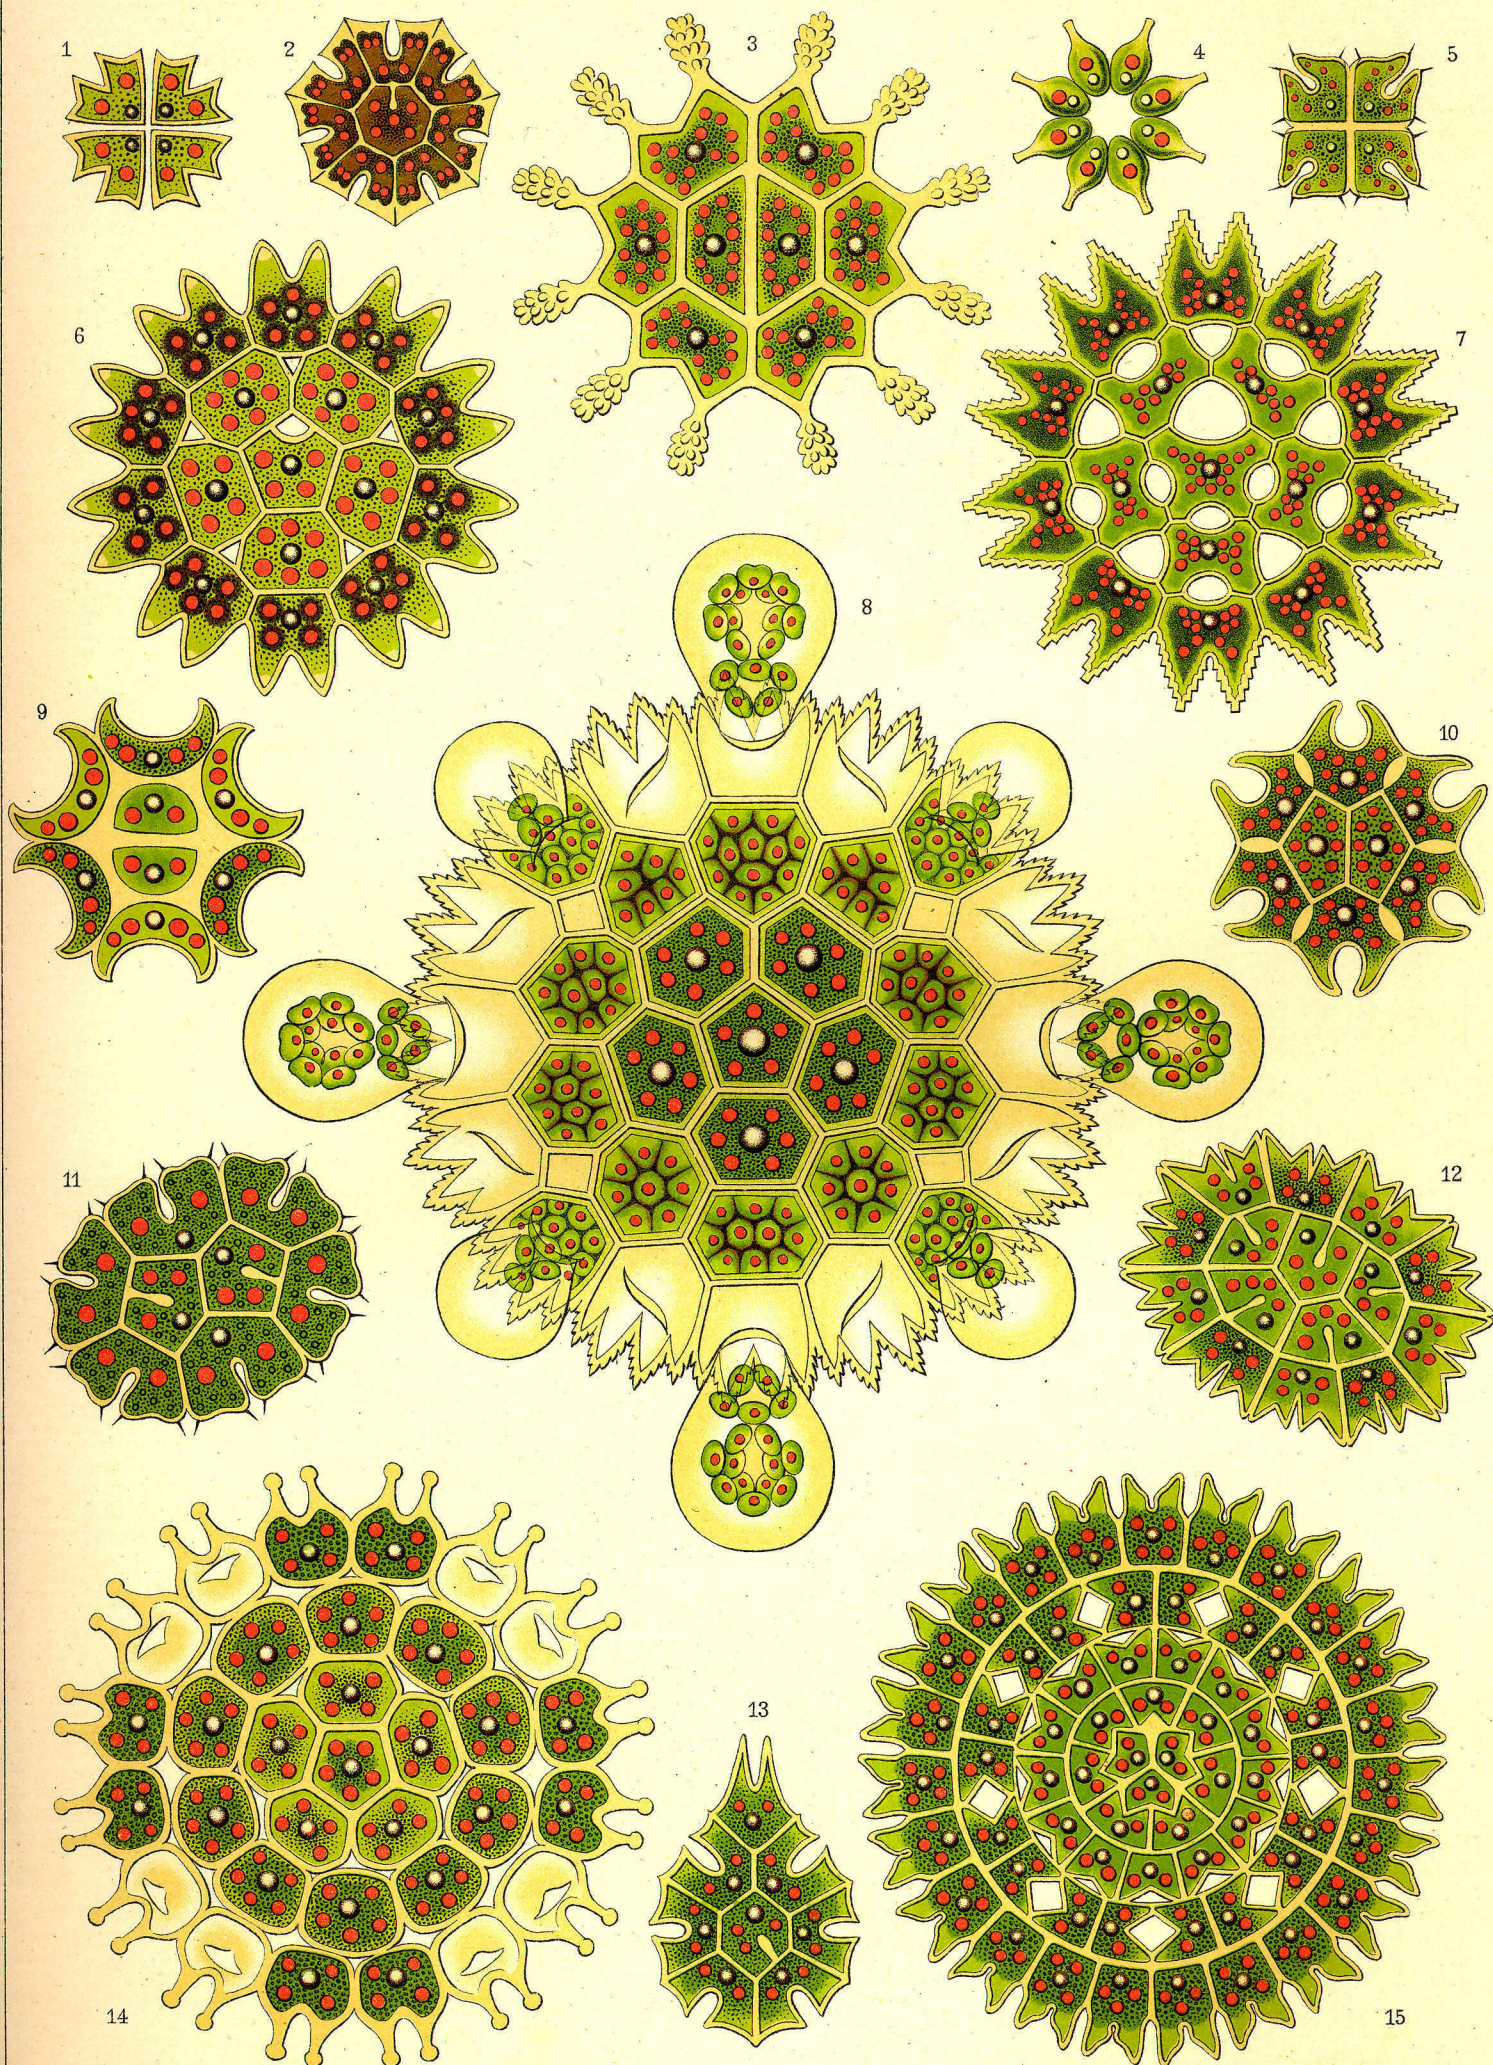

Cyrtosira. — Flaschenstrahlkugeln.

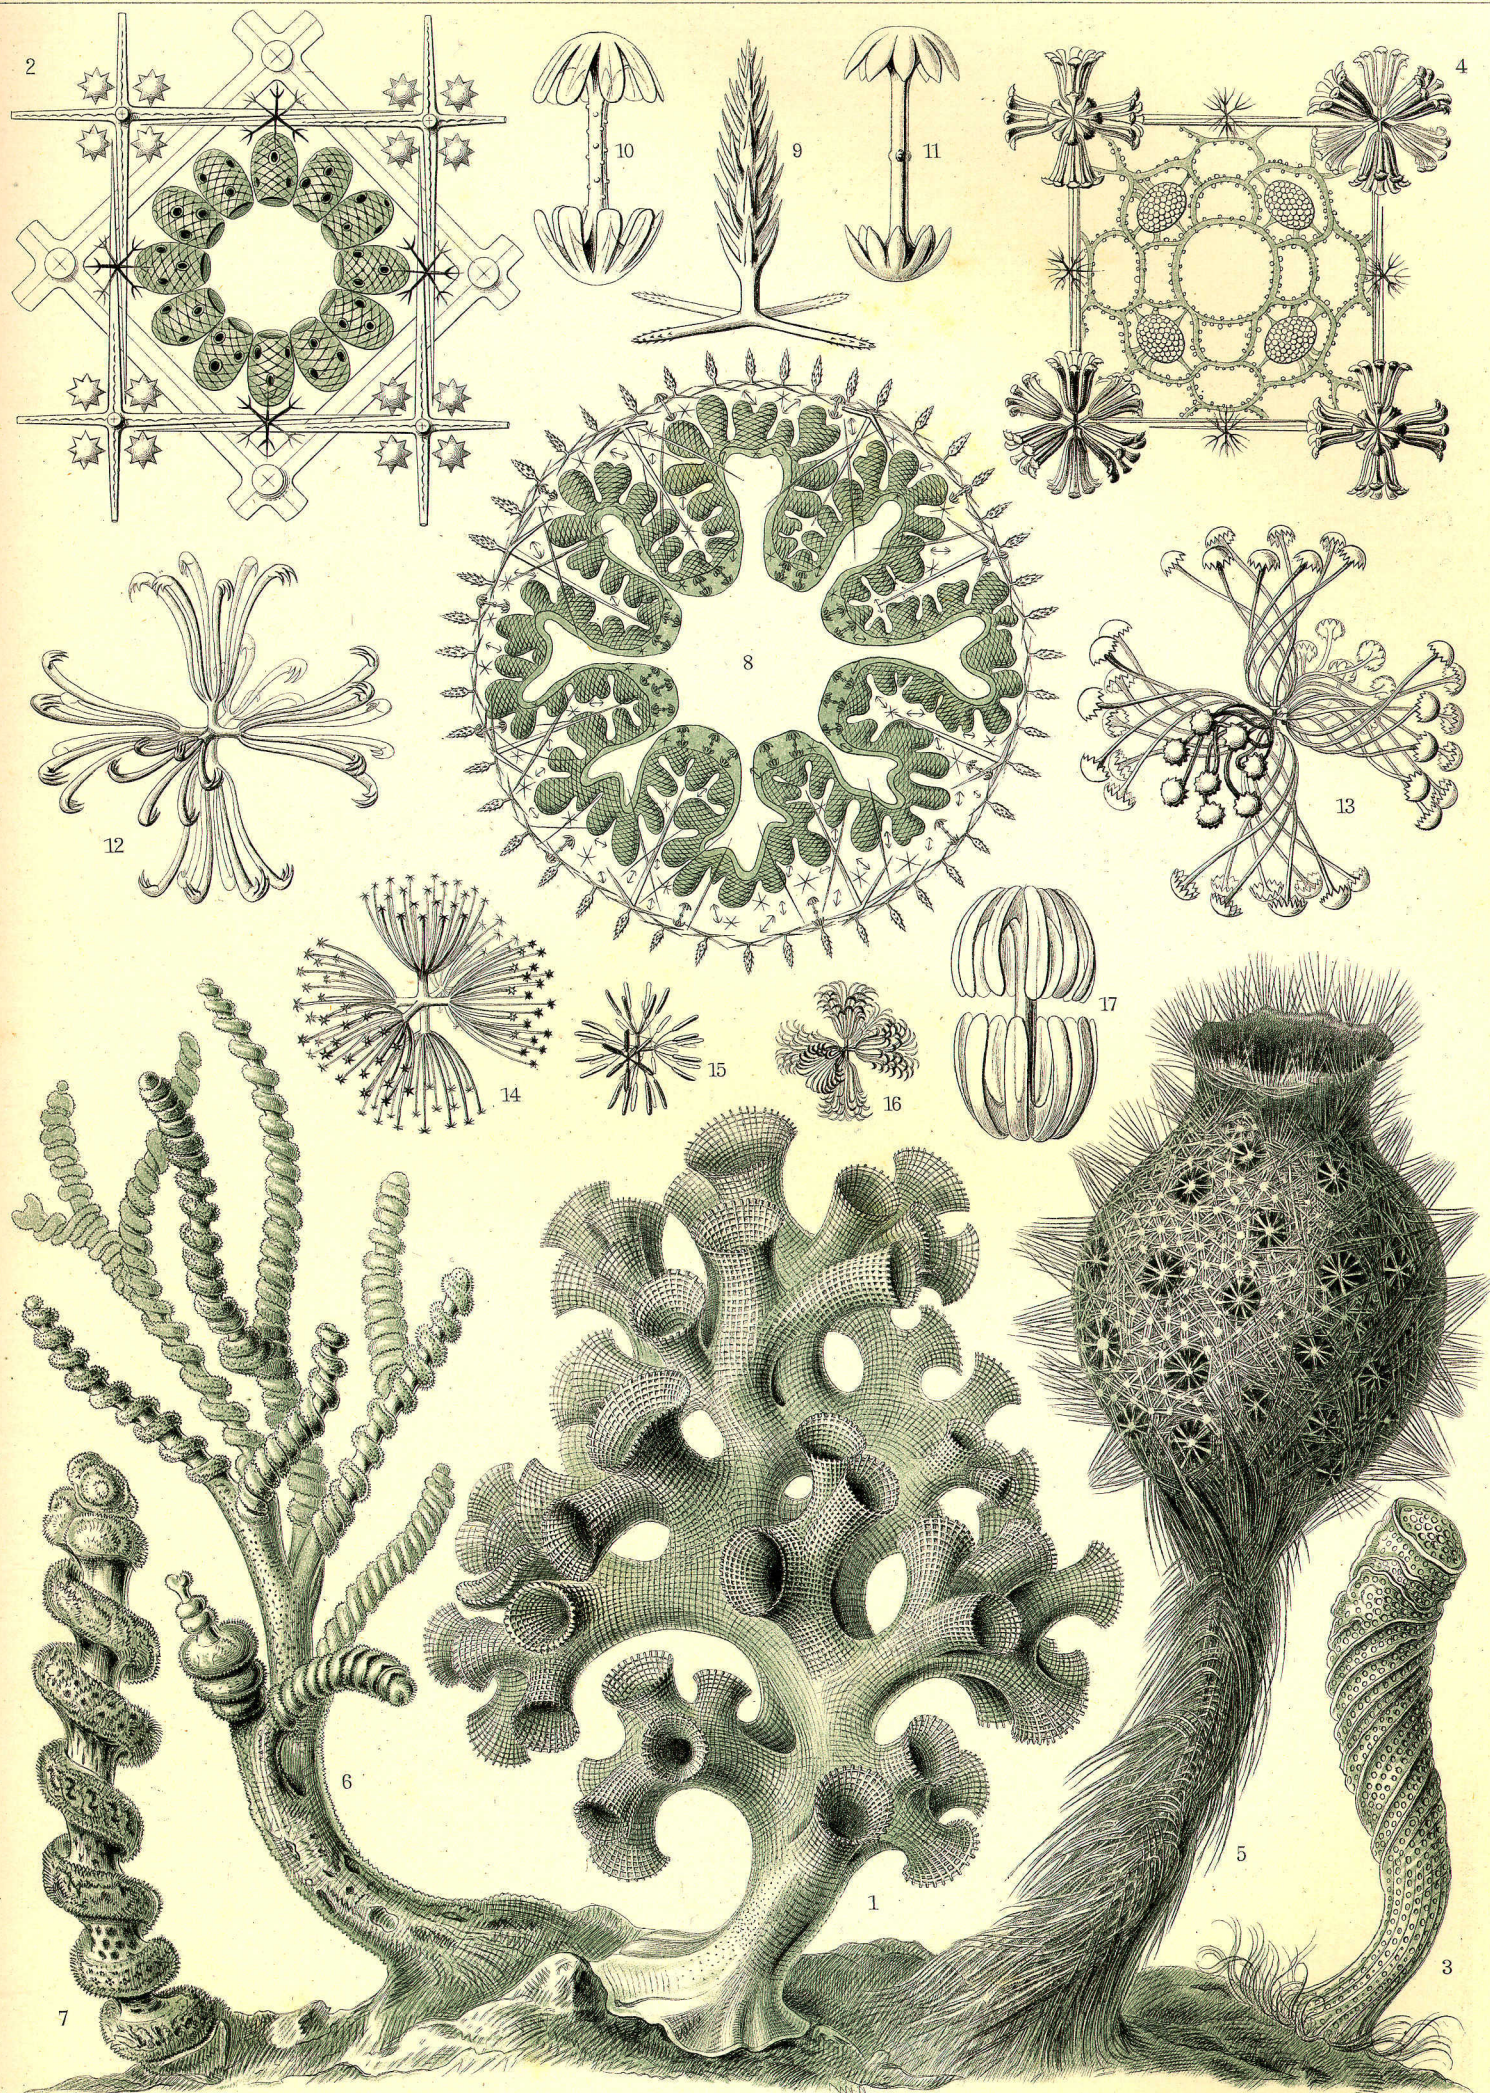

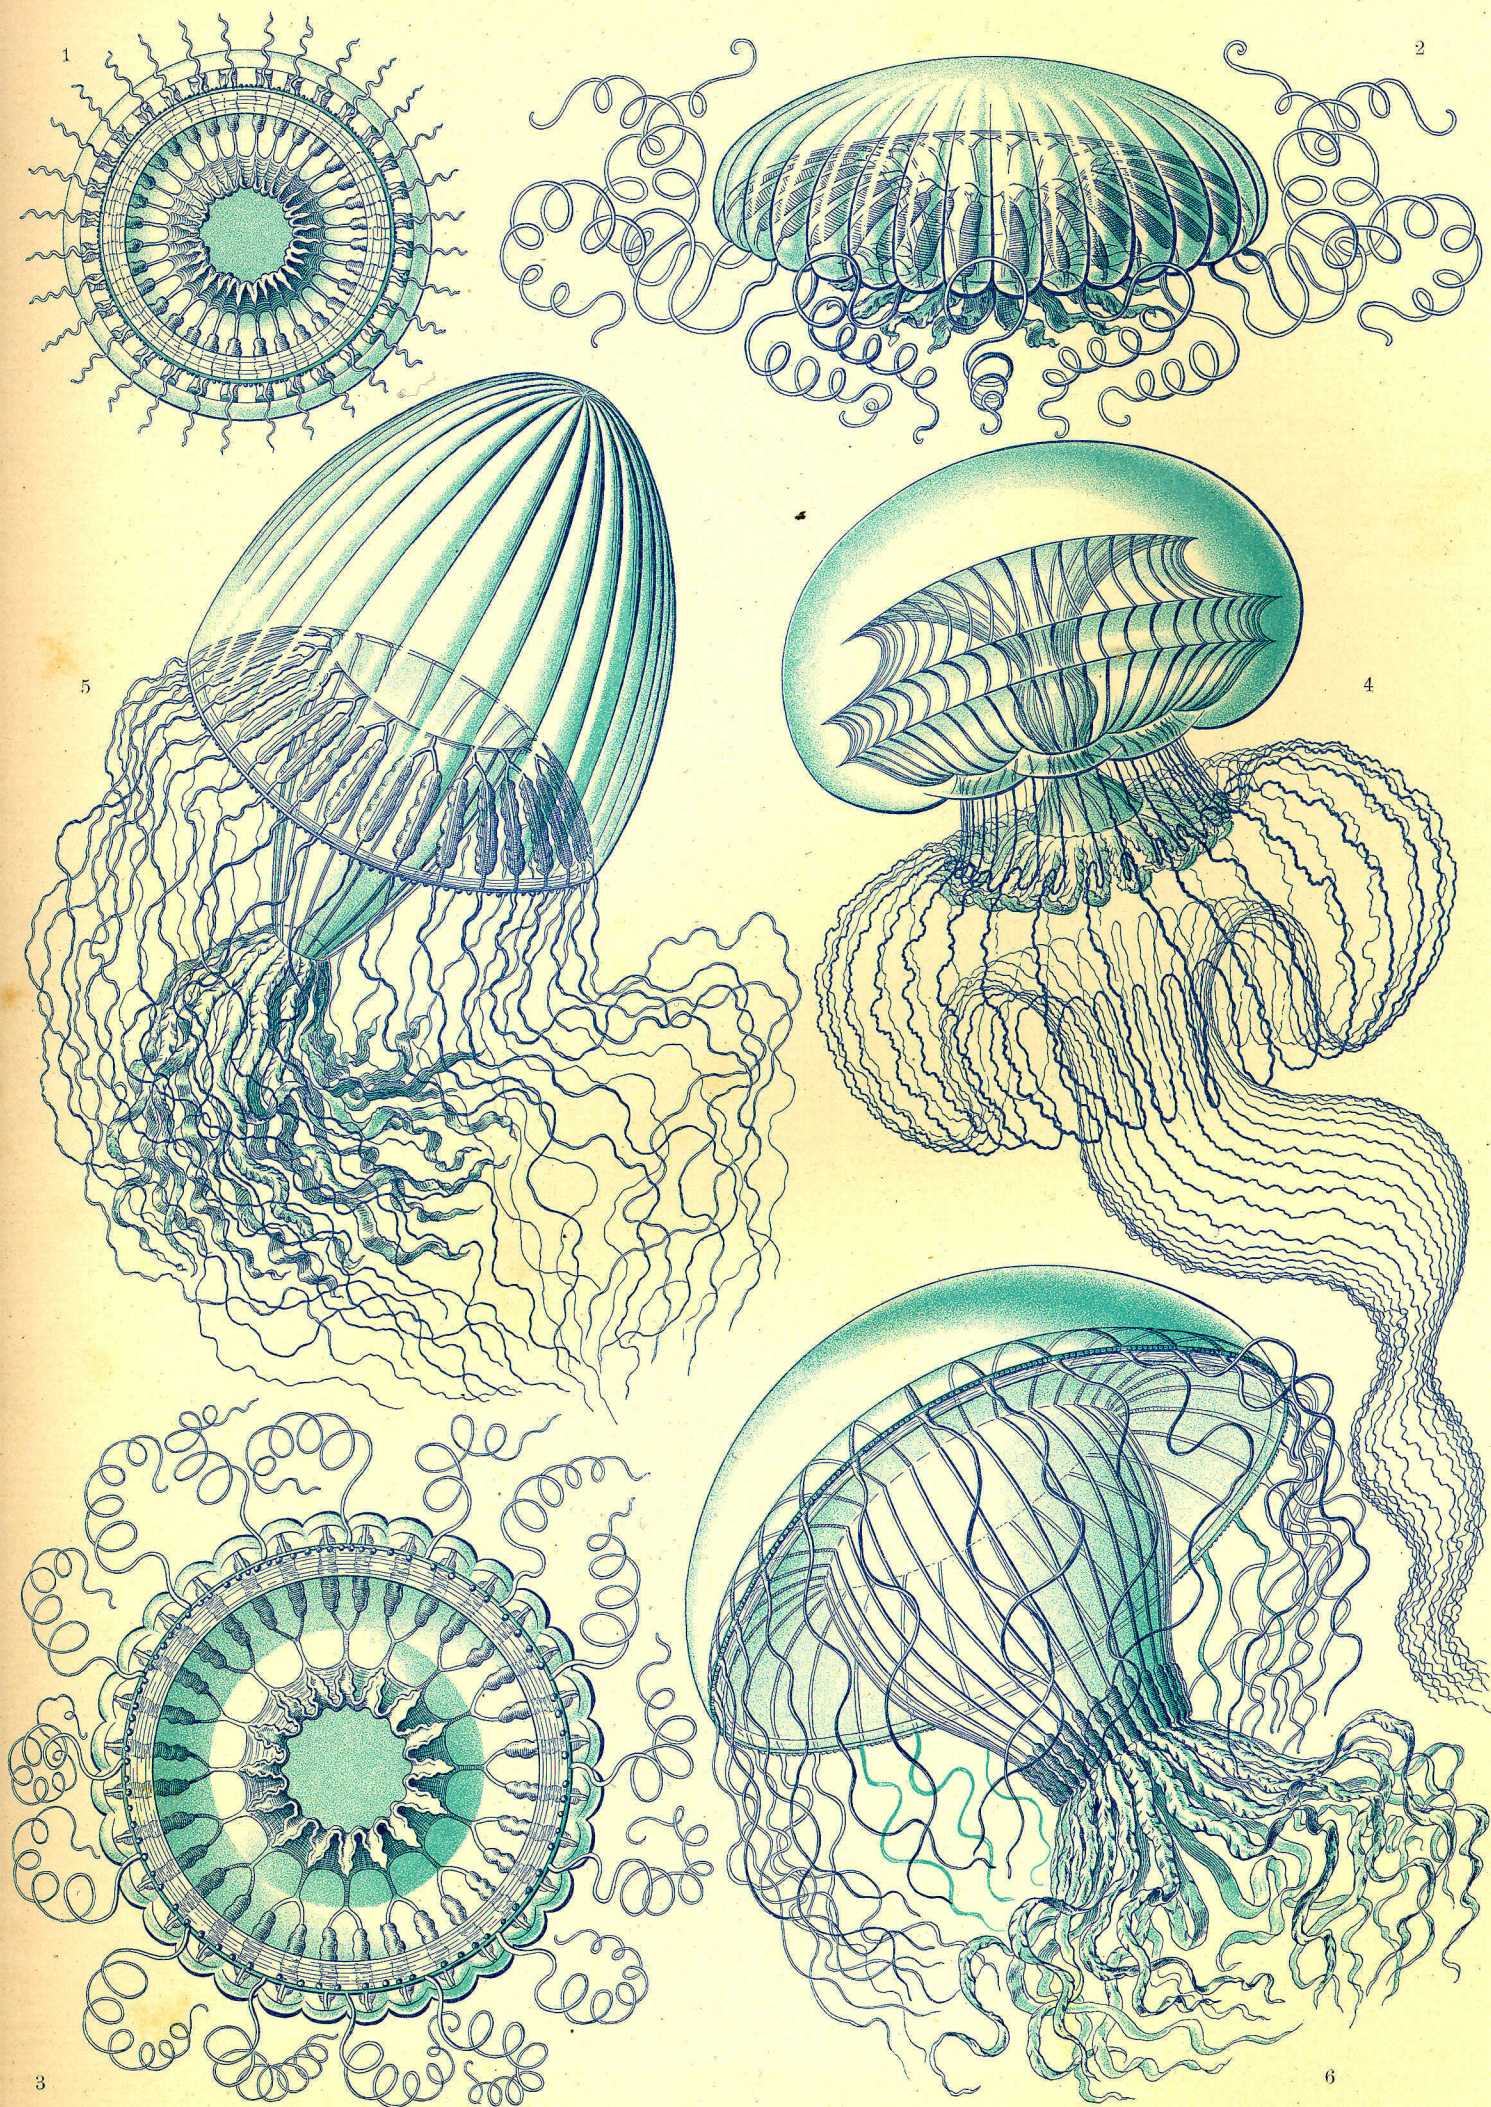

Bryozoa. — Moostiere.

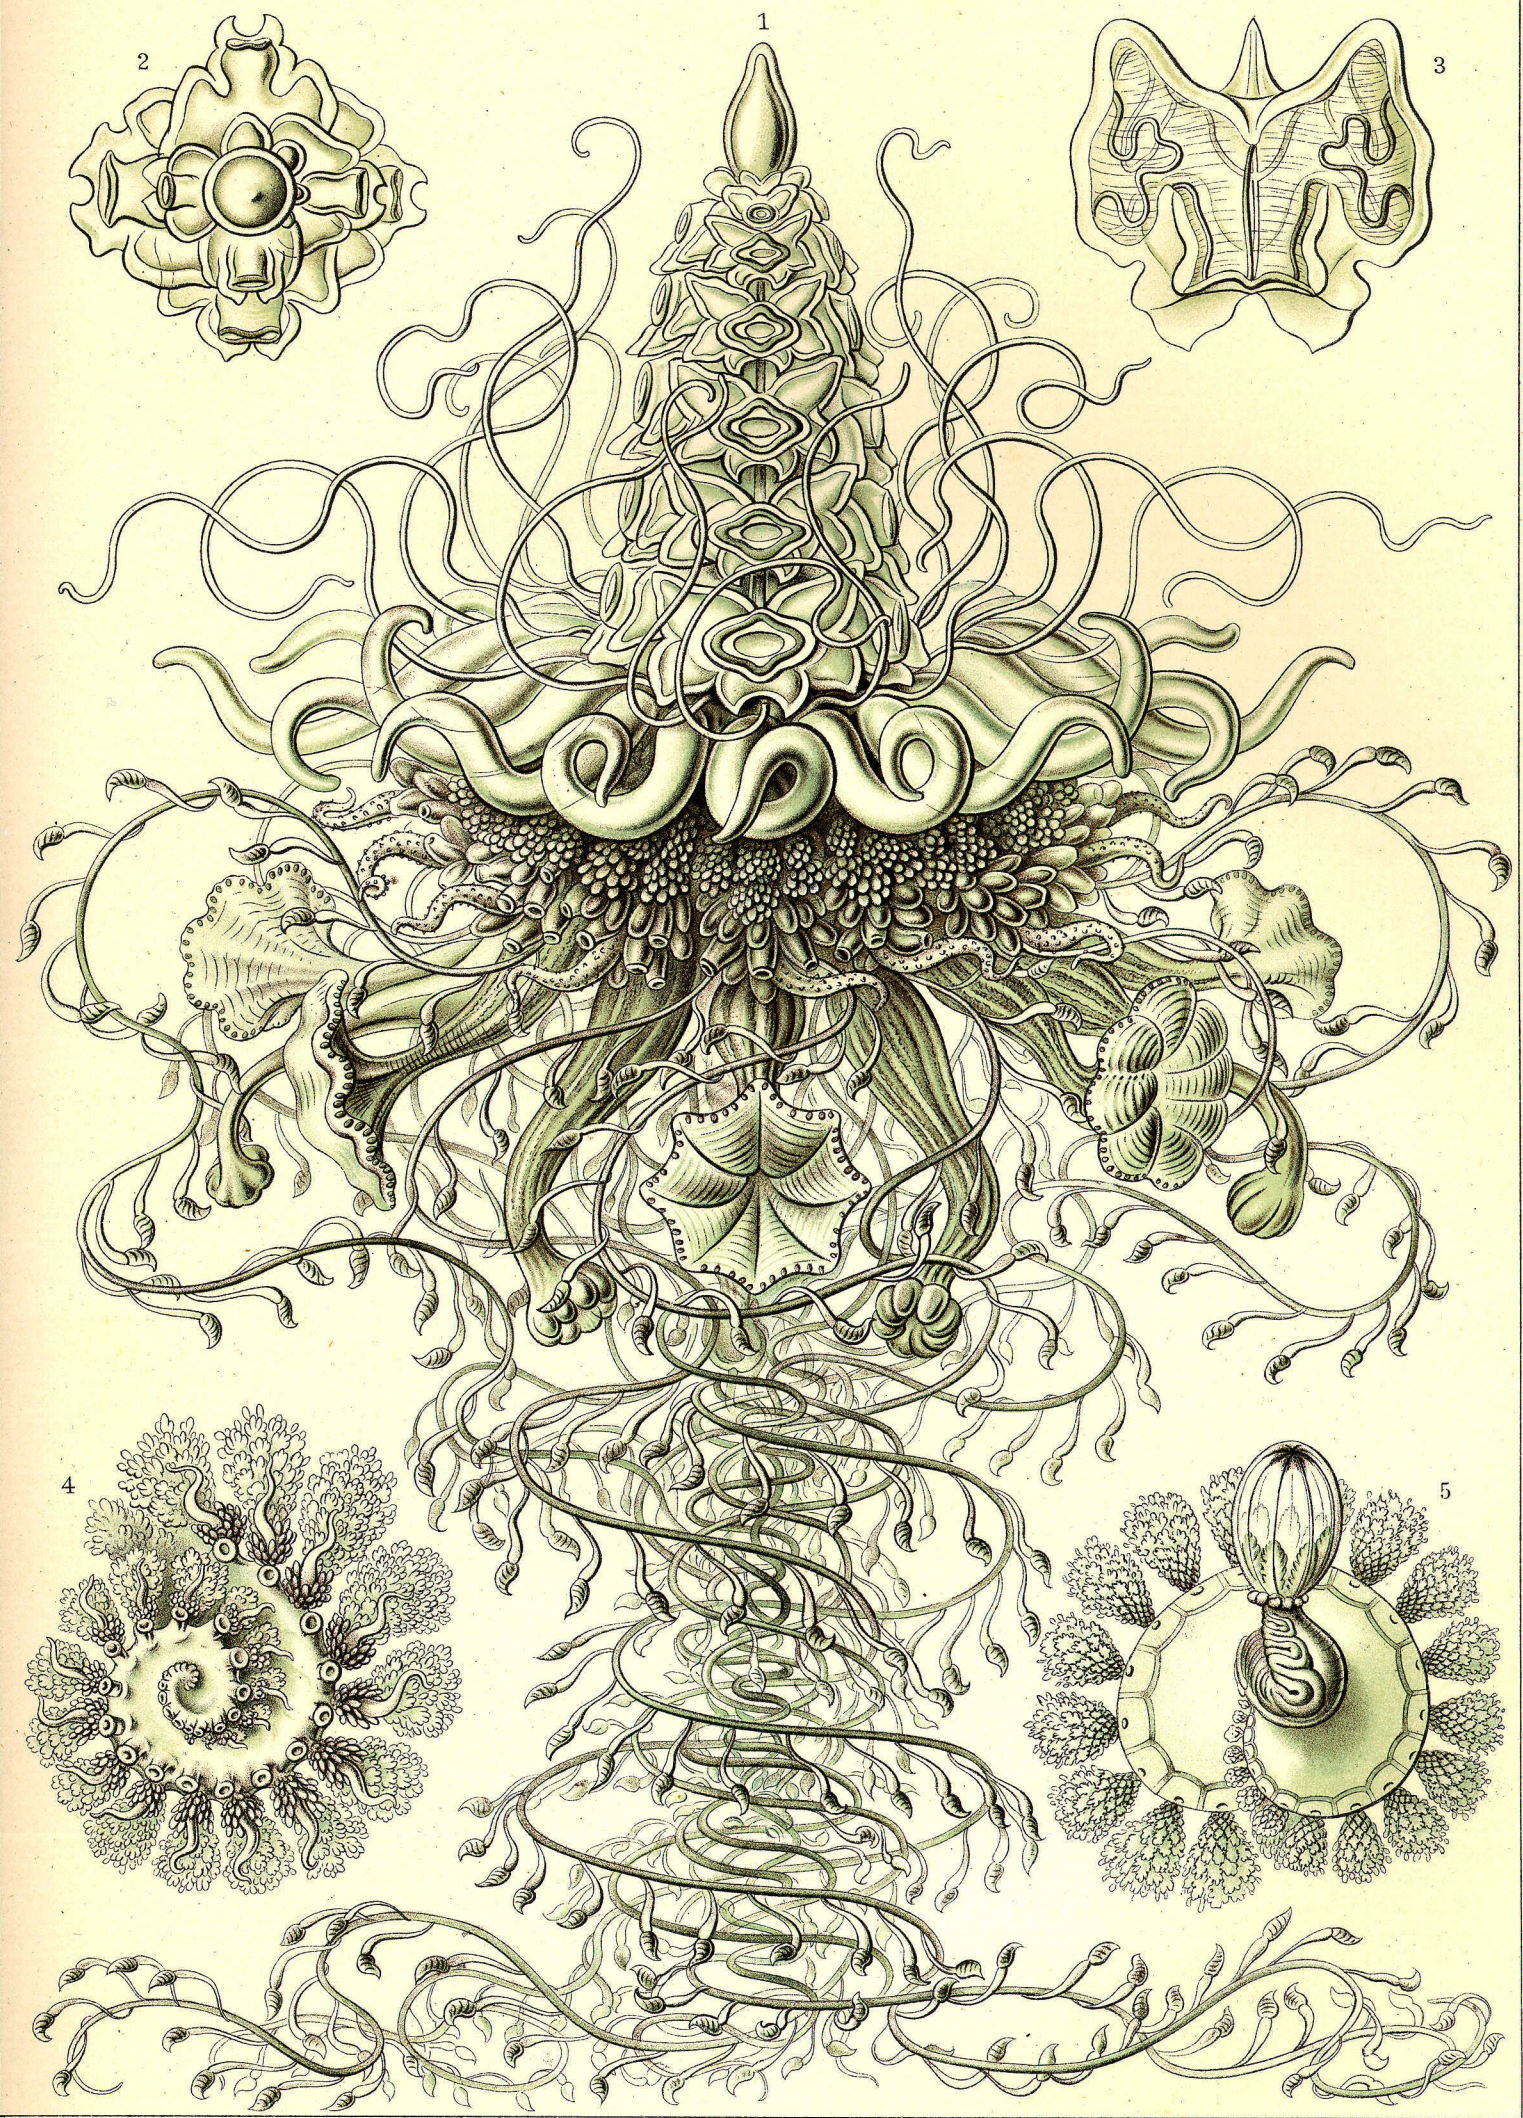

Melethallia. — Gesellige Algetten.

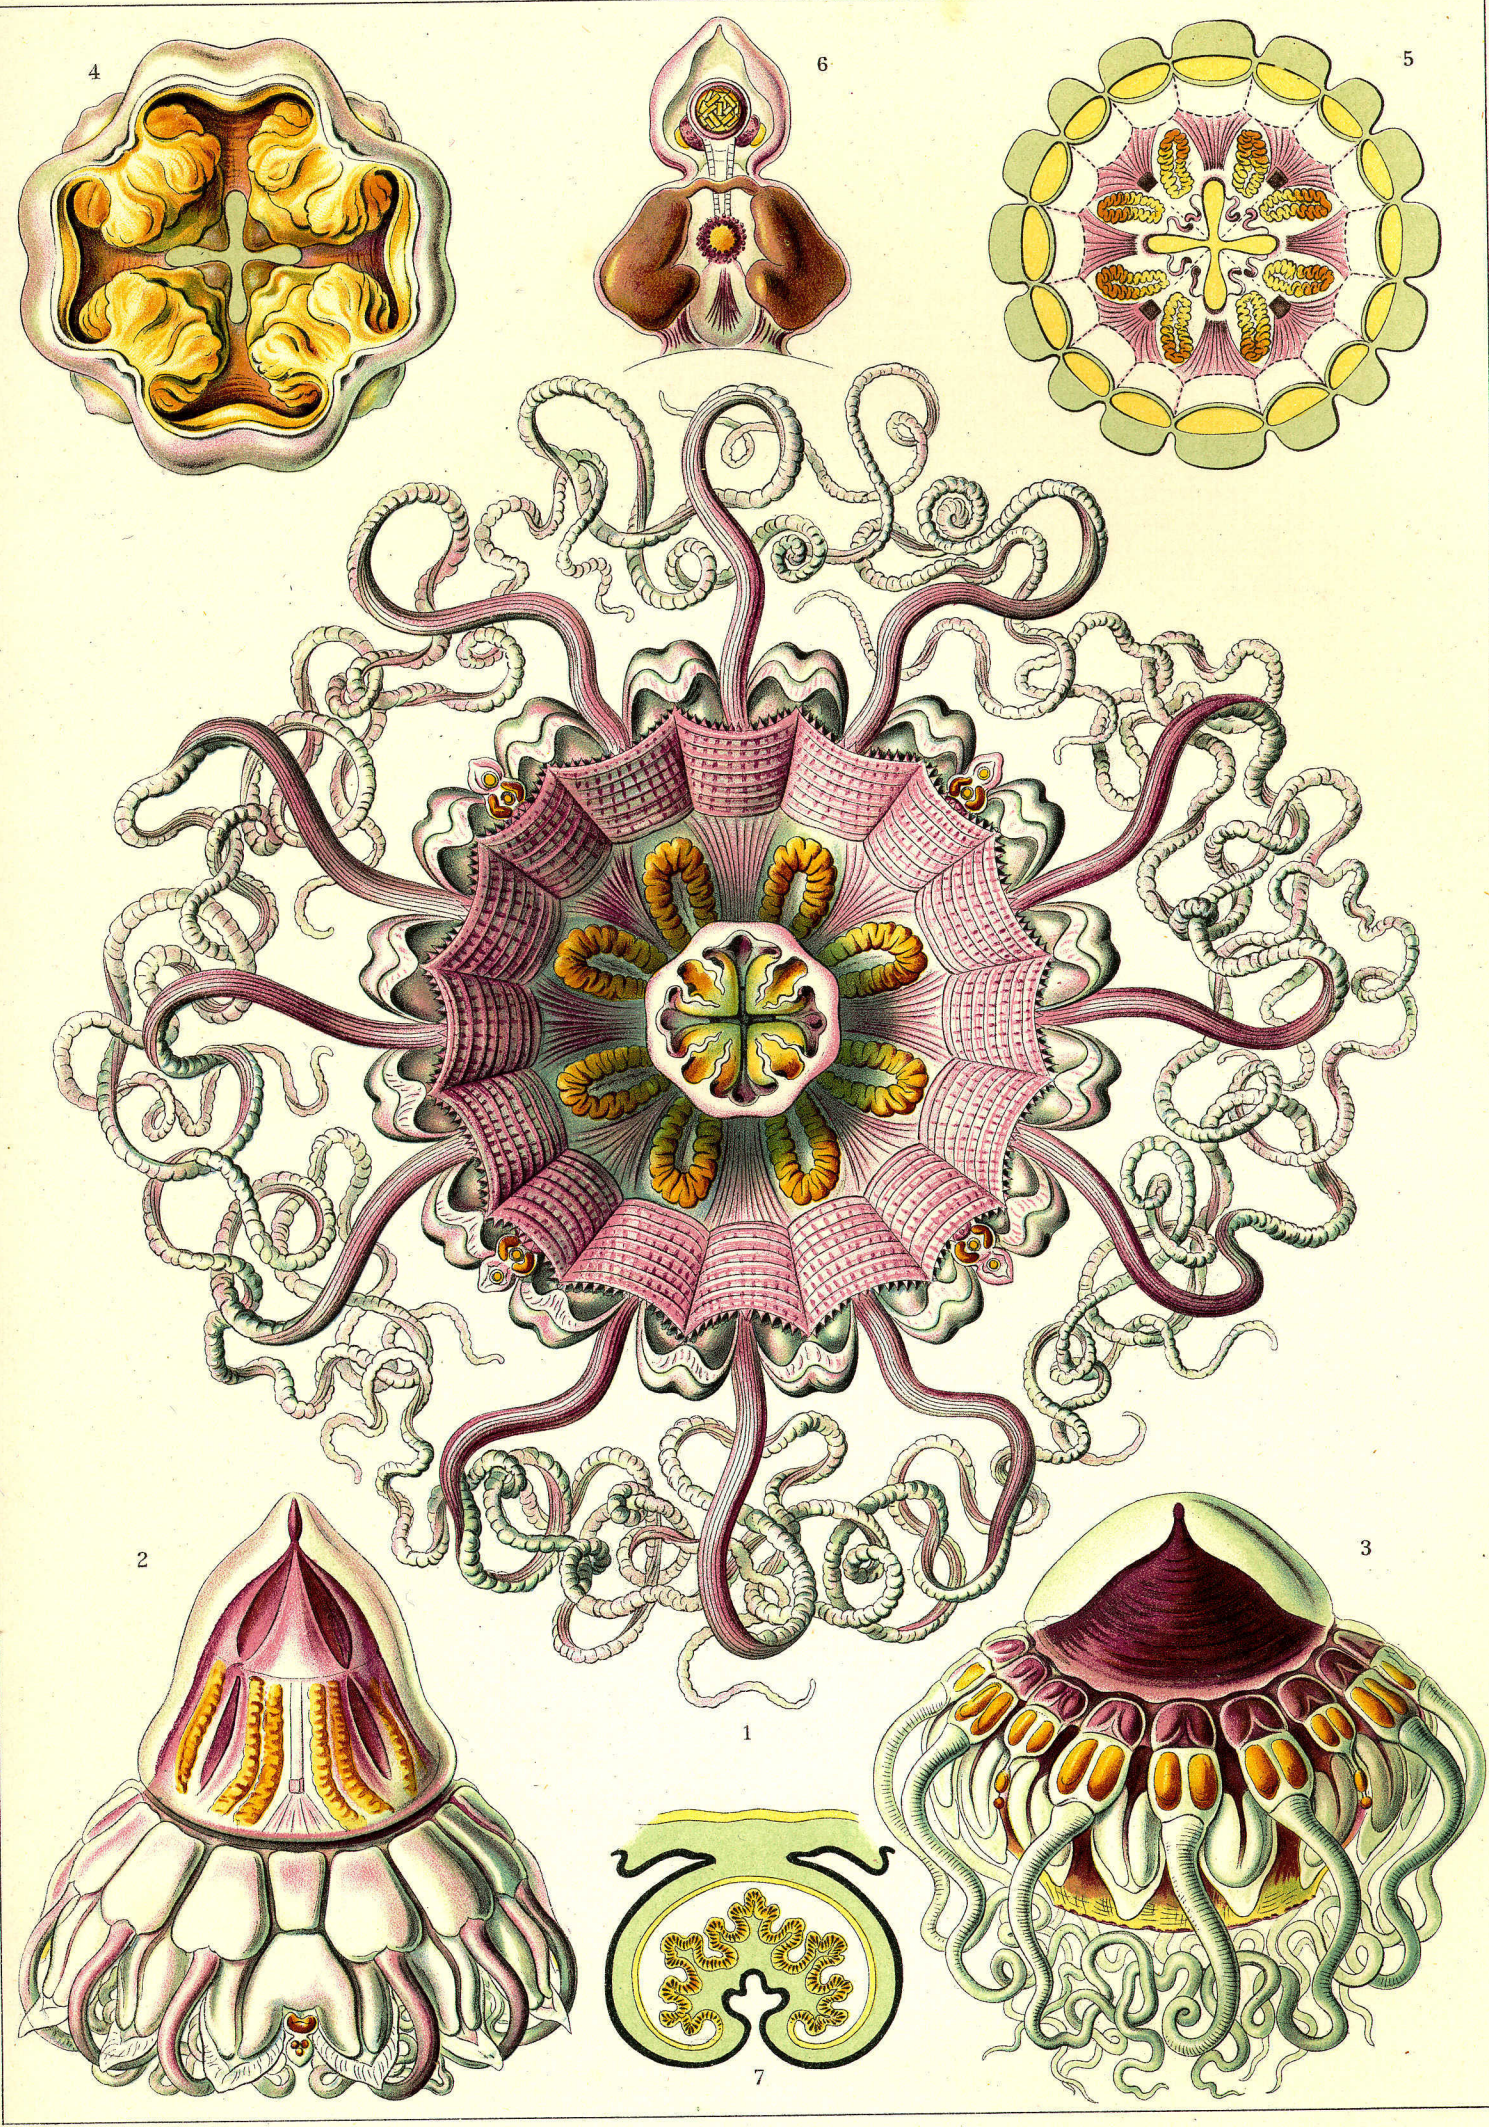

Hexactinellae. — Glaschwämme.

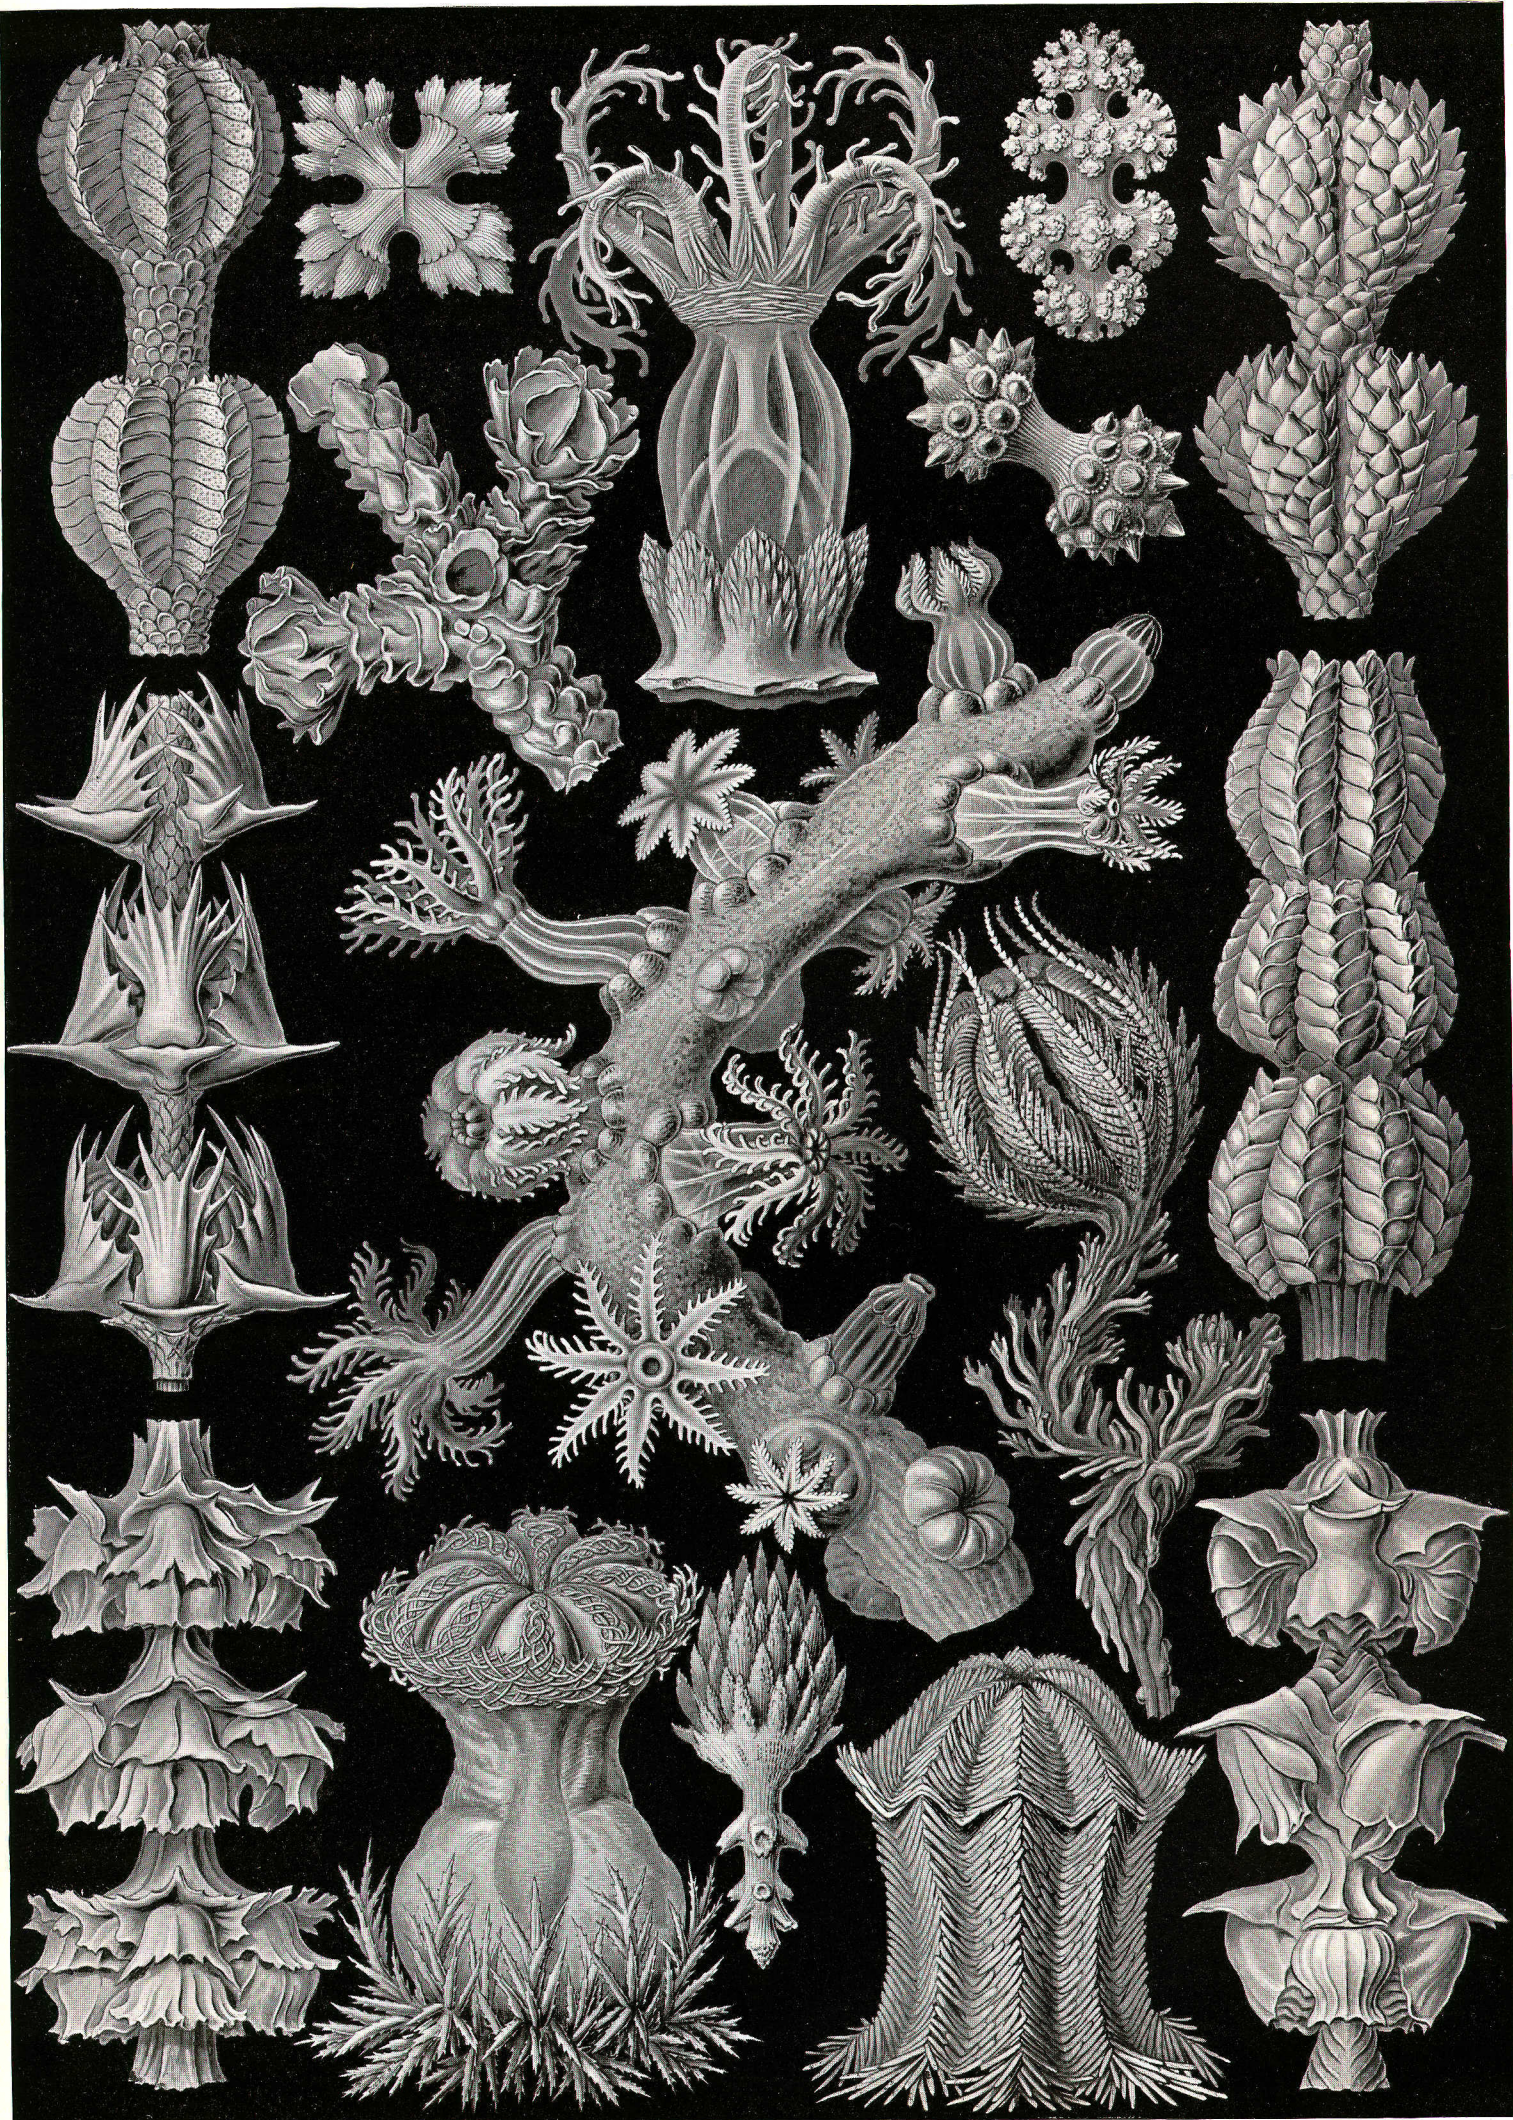

Leptomedusae. — Faltenquassen.

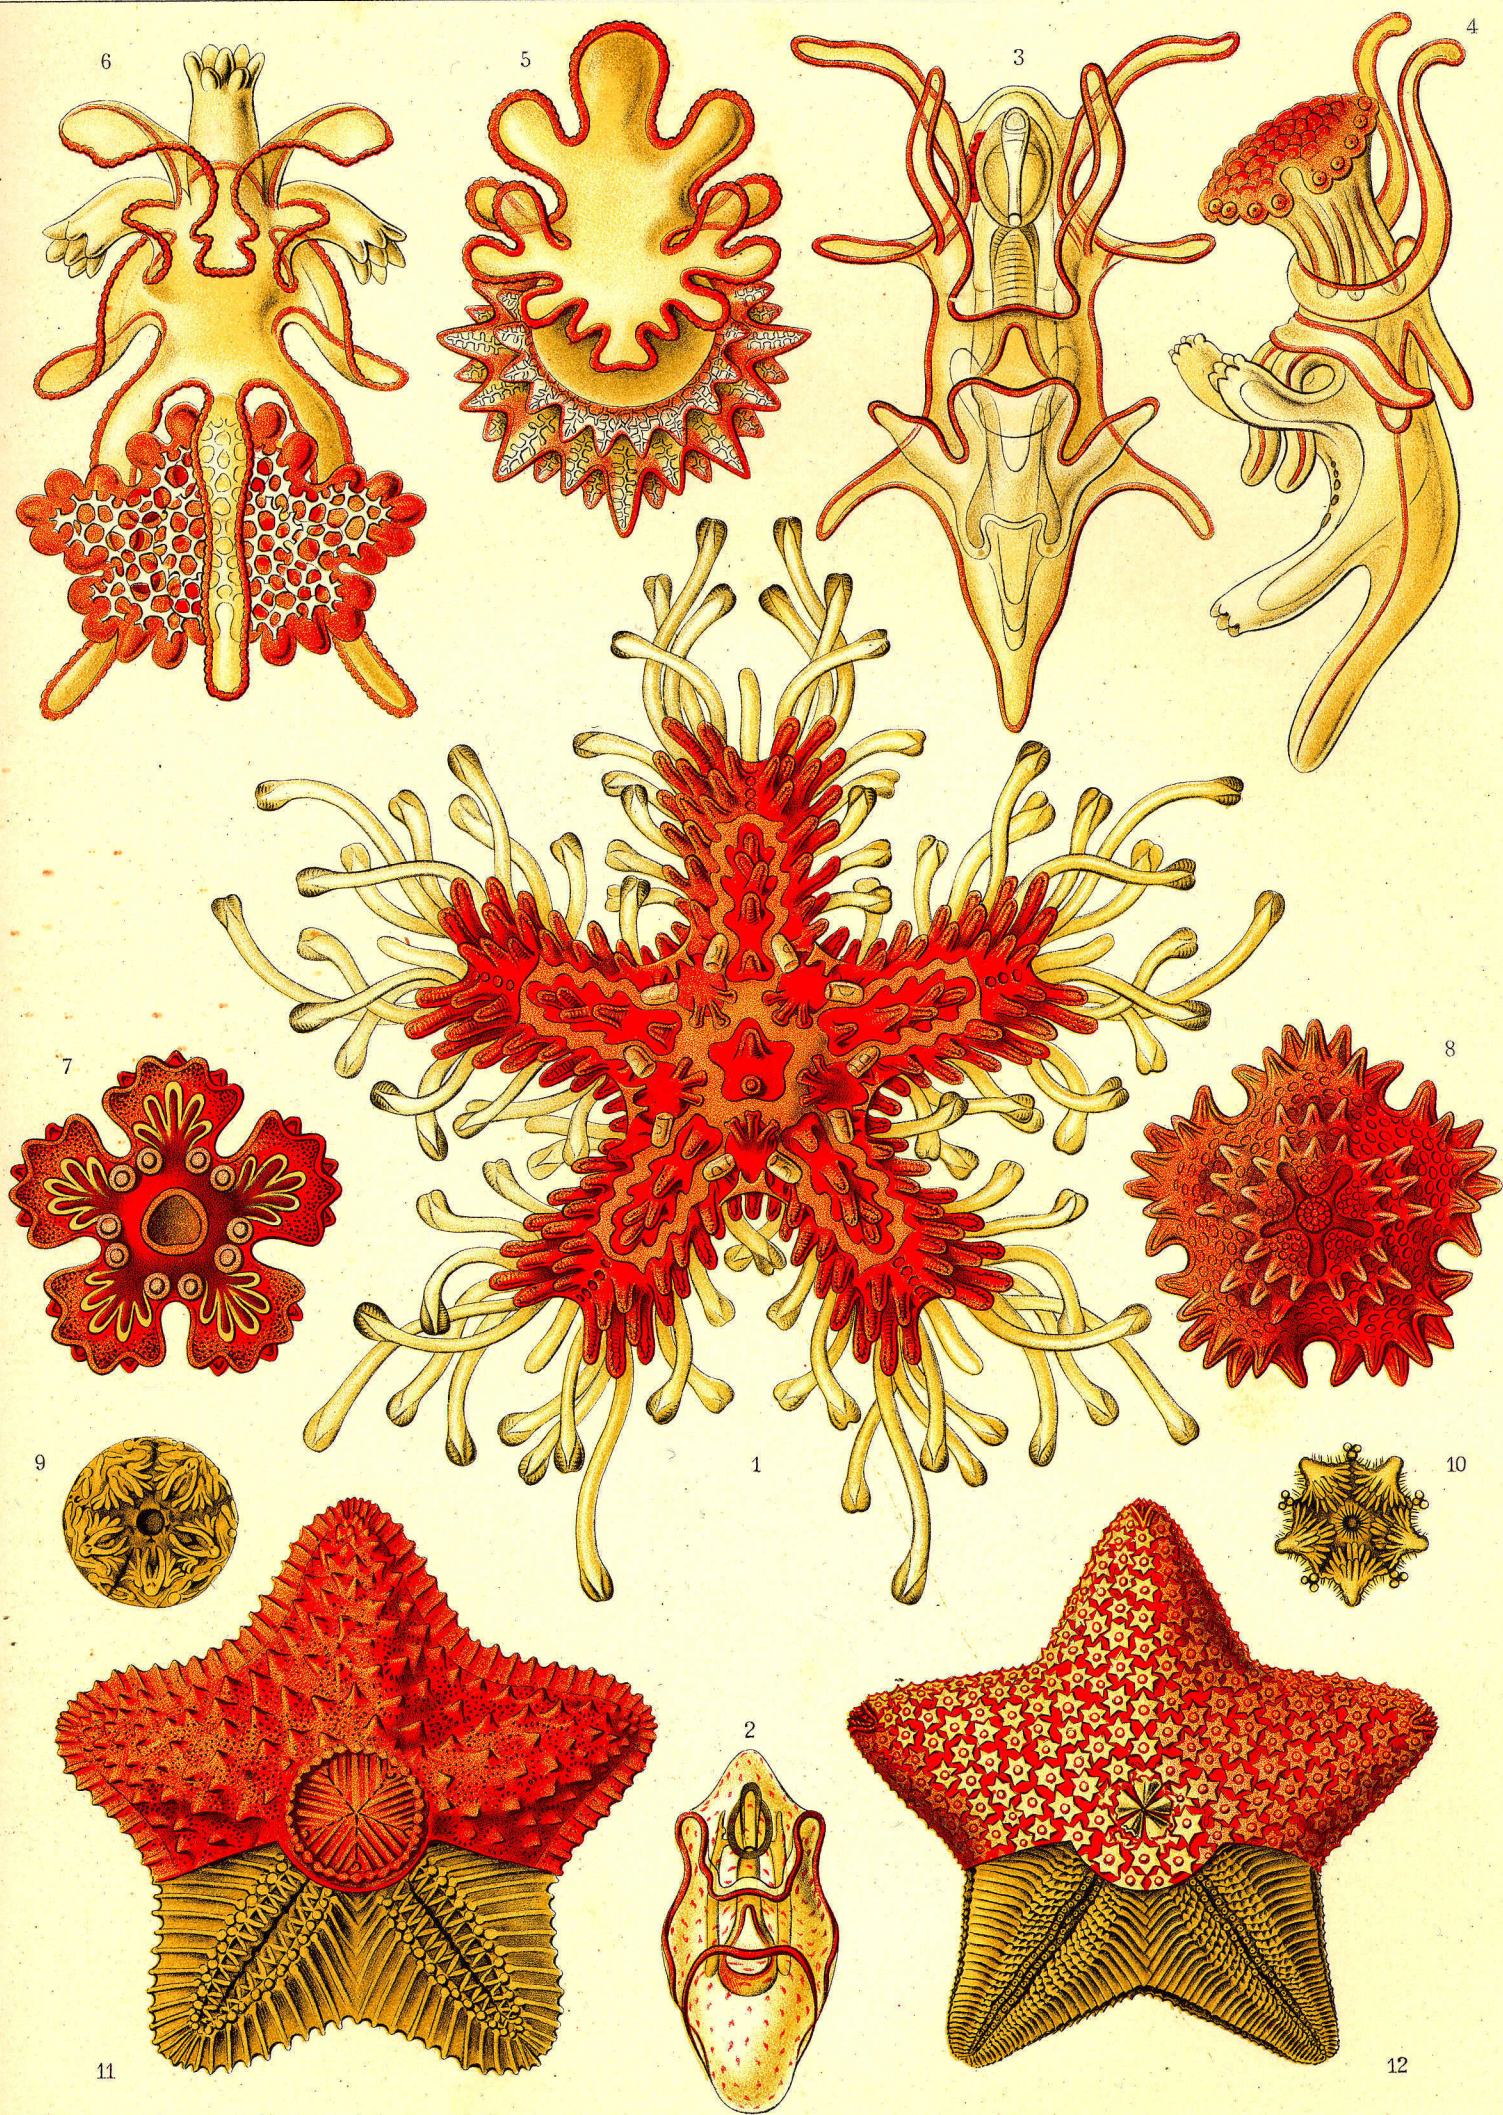

Siphonophorae. — Staatsquassen.

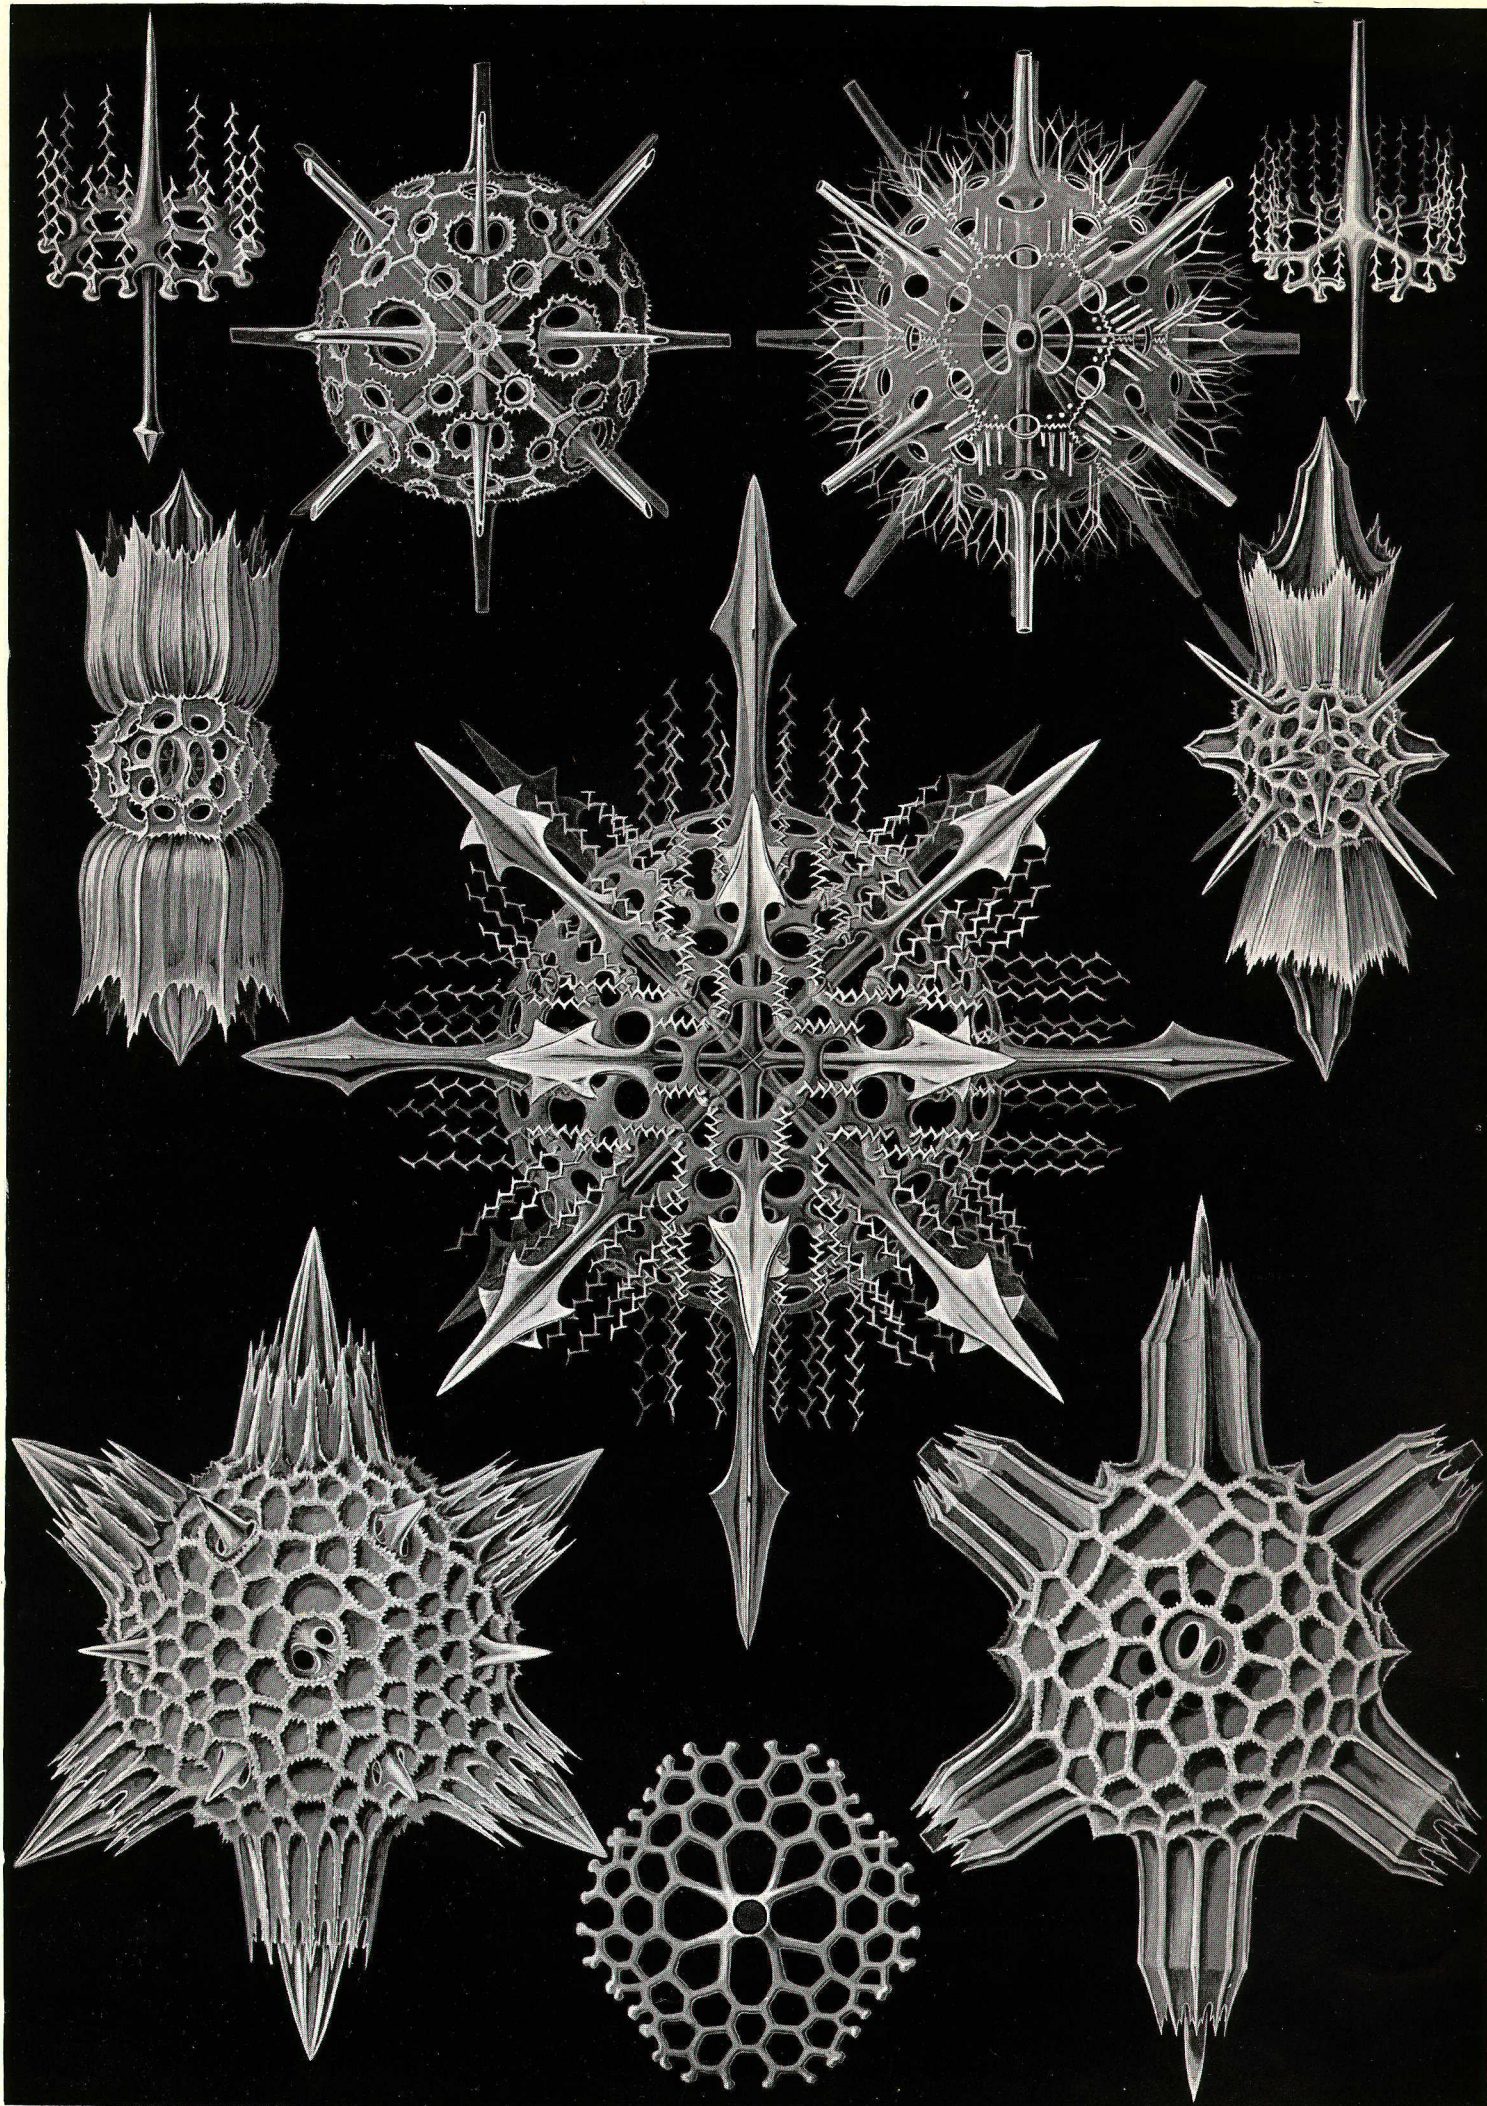

Peromedusae. — Taschenquassen.

Gorgonida. — Bindenkorallen.

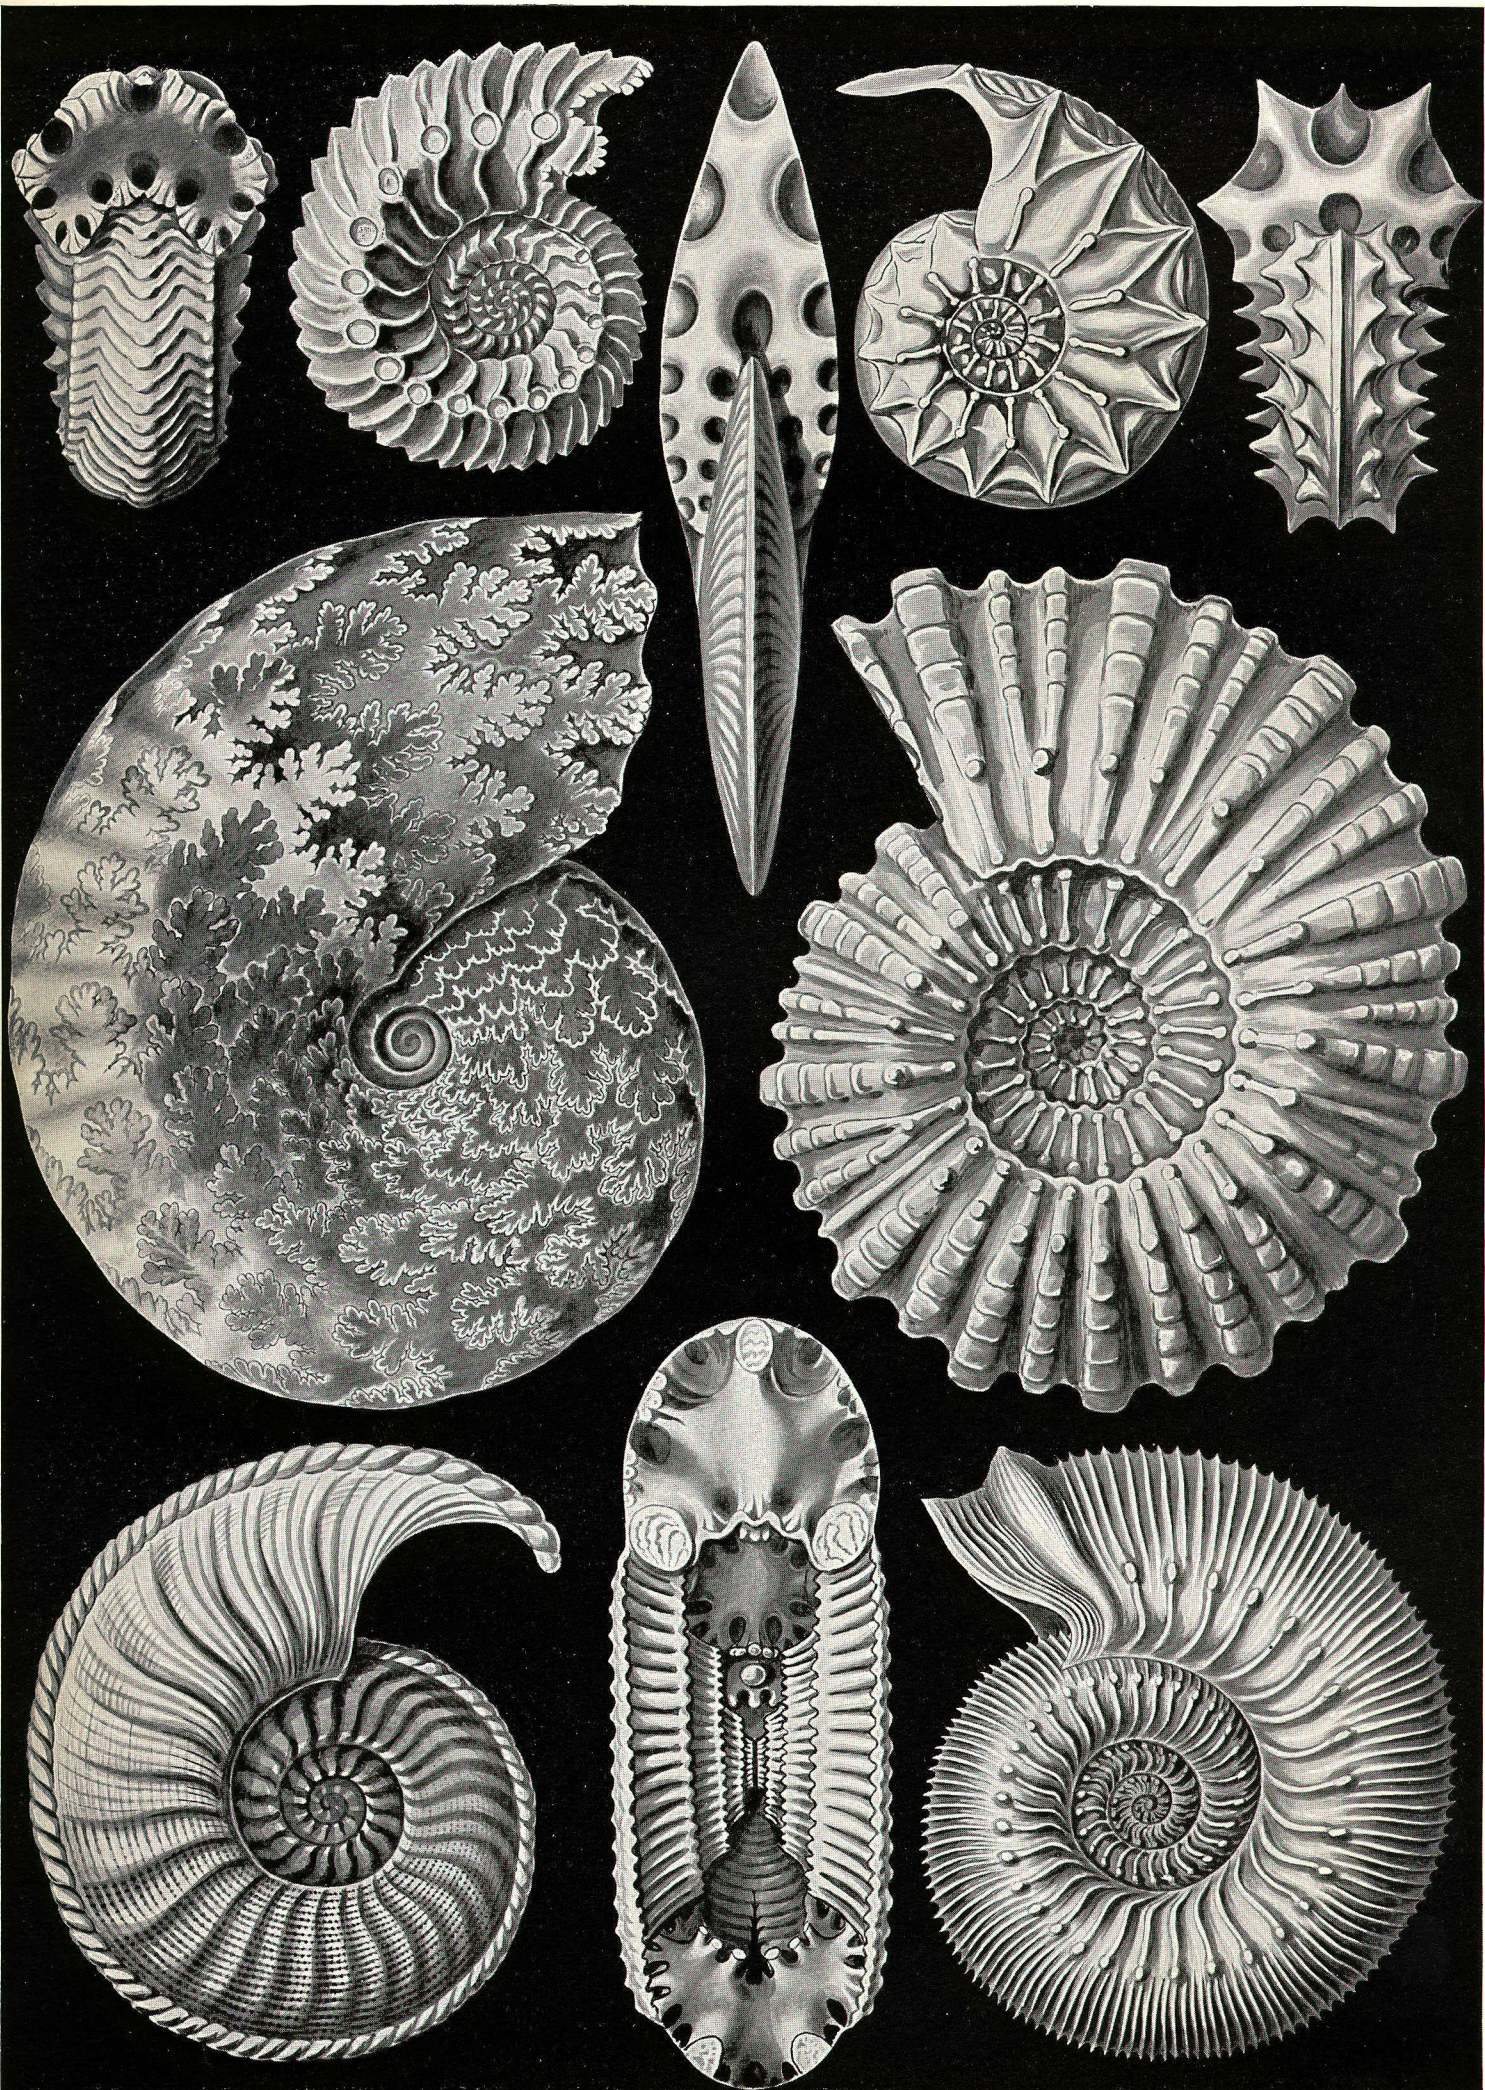

Acanthophracta. — Wunderstrahllinge.

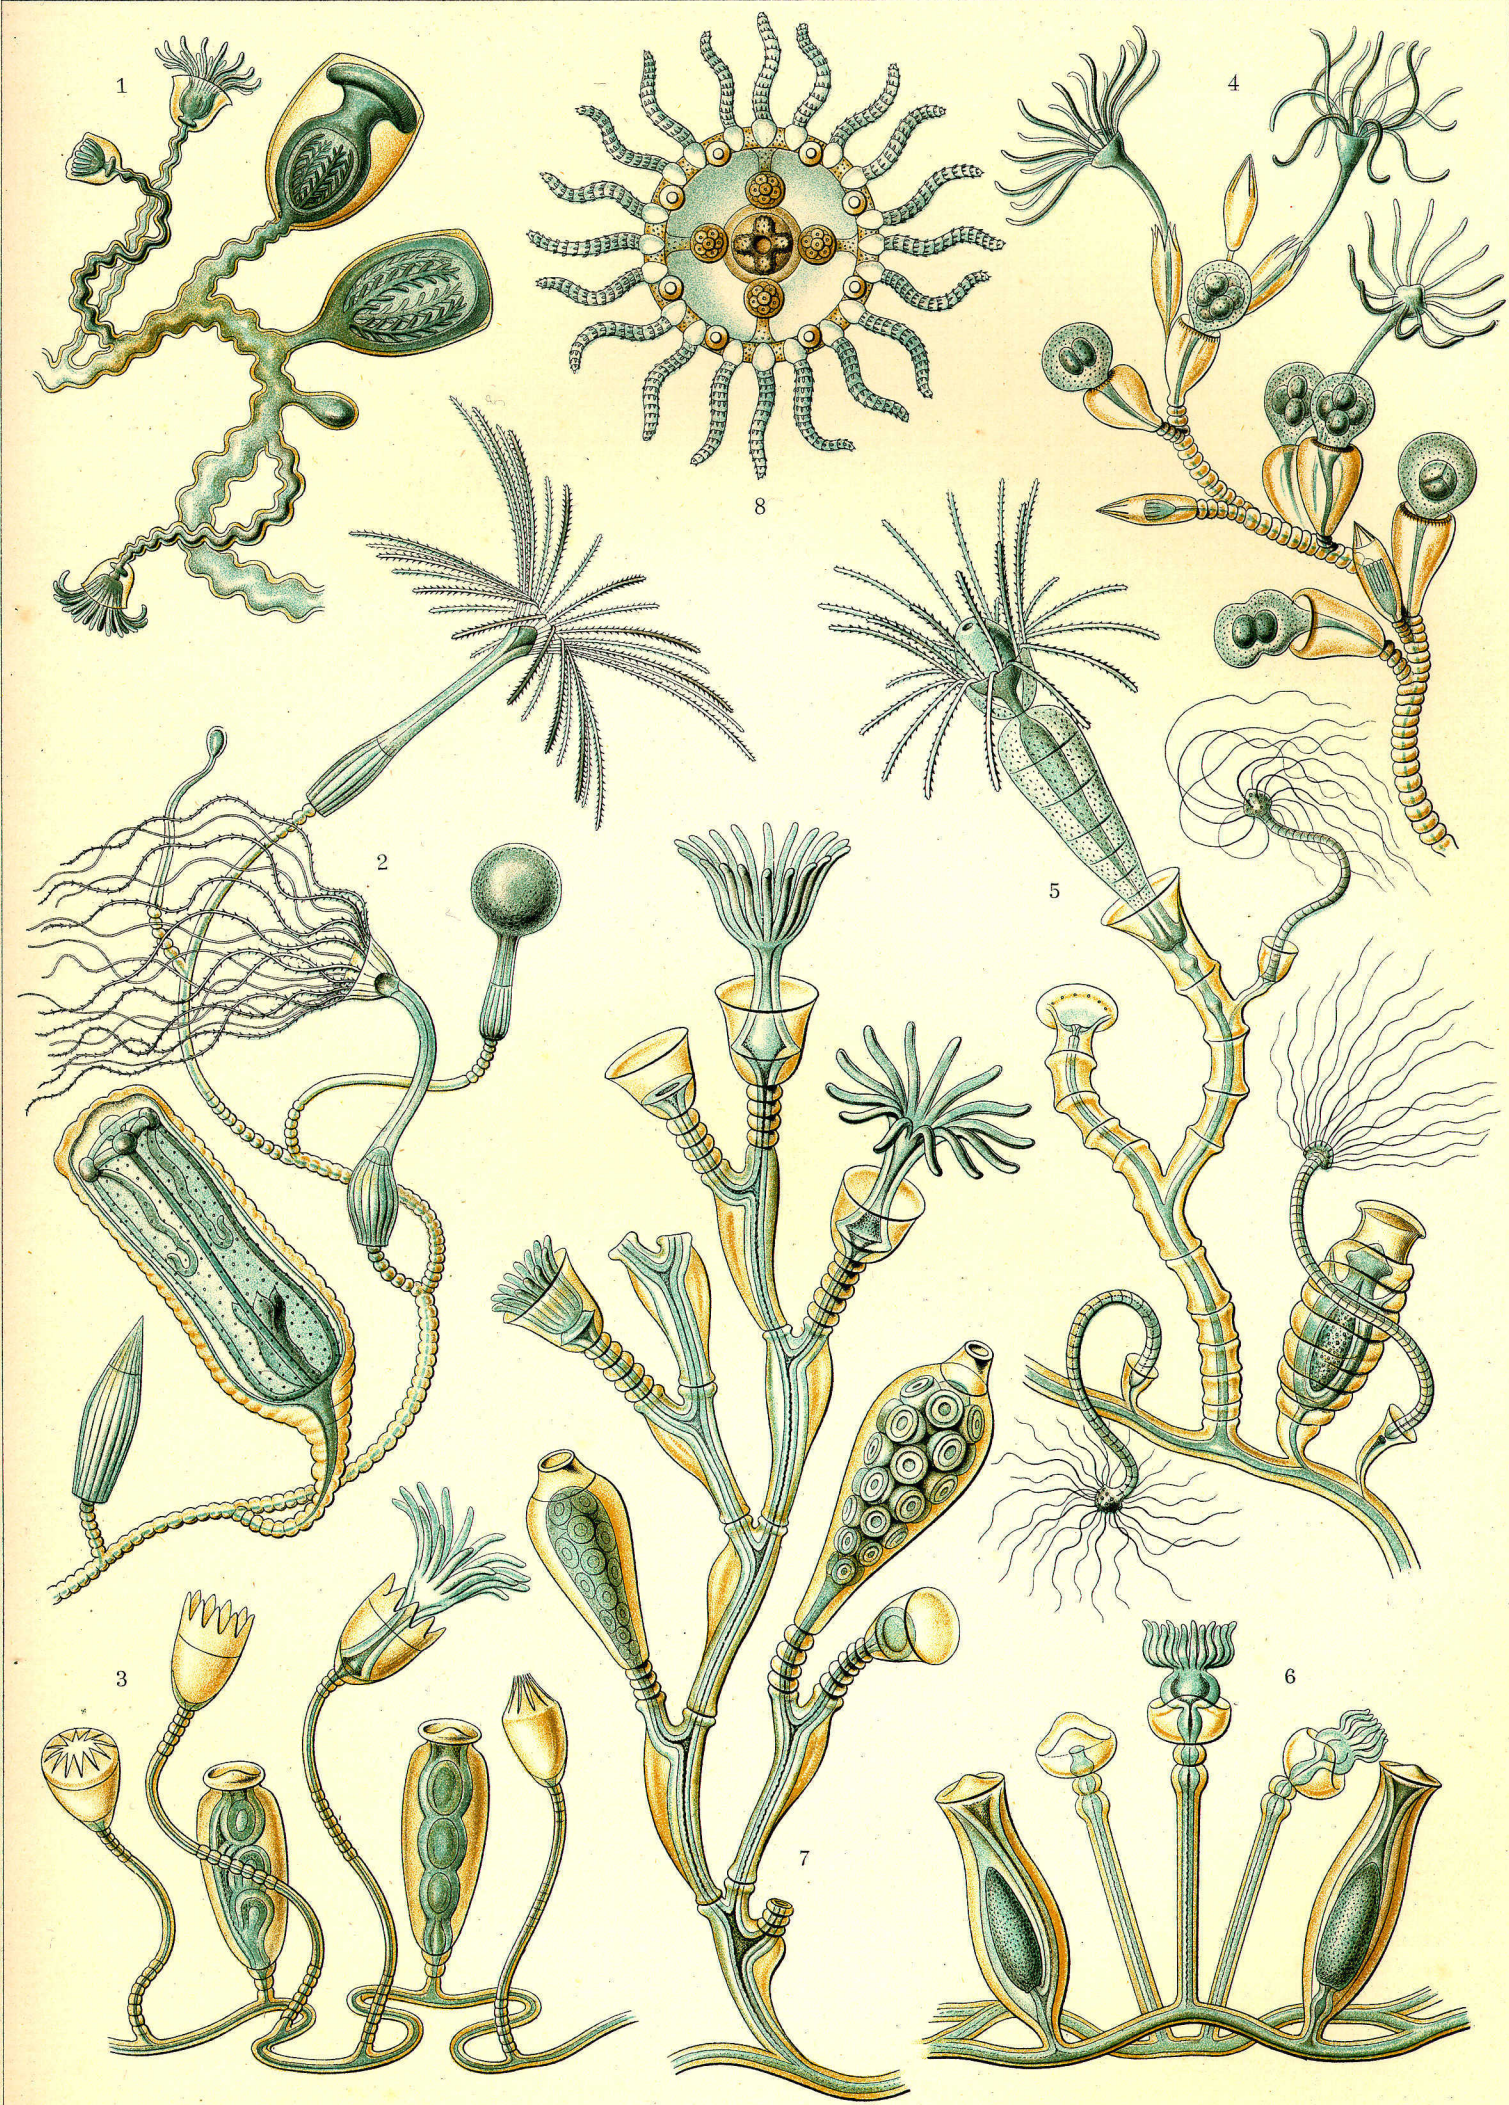

Ostraciontes. — Kofferfische.

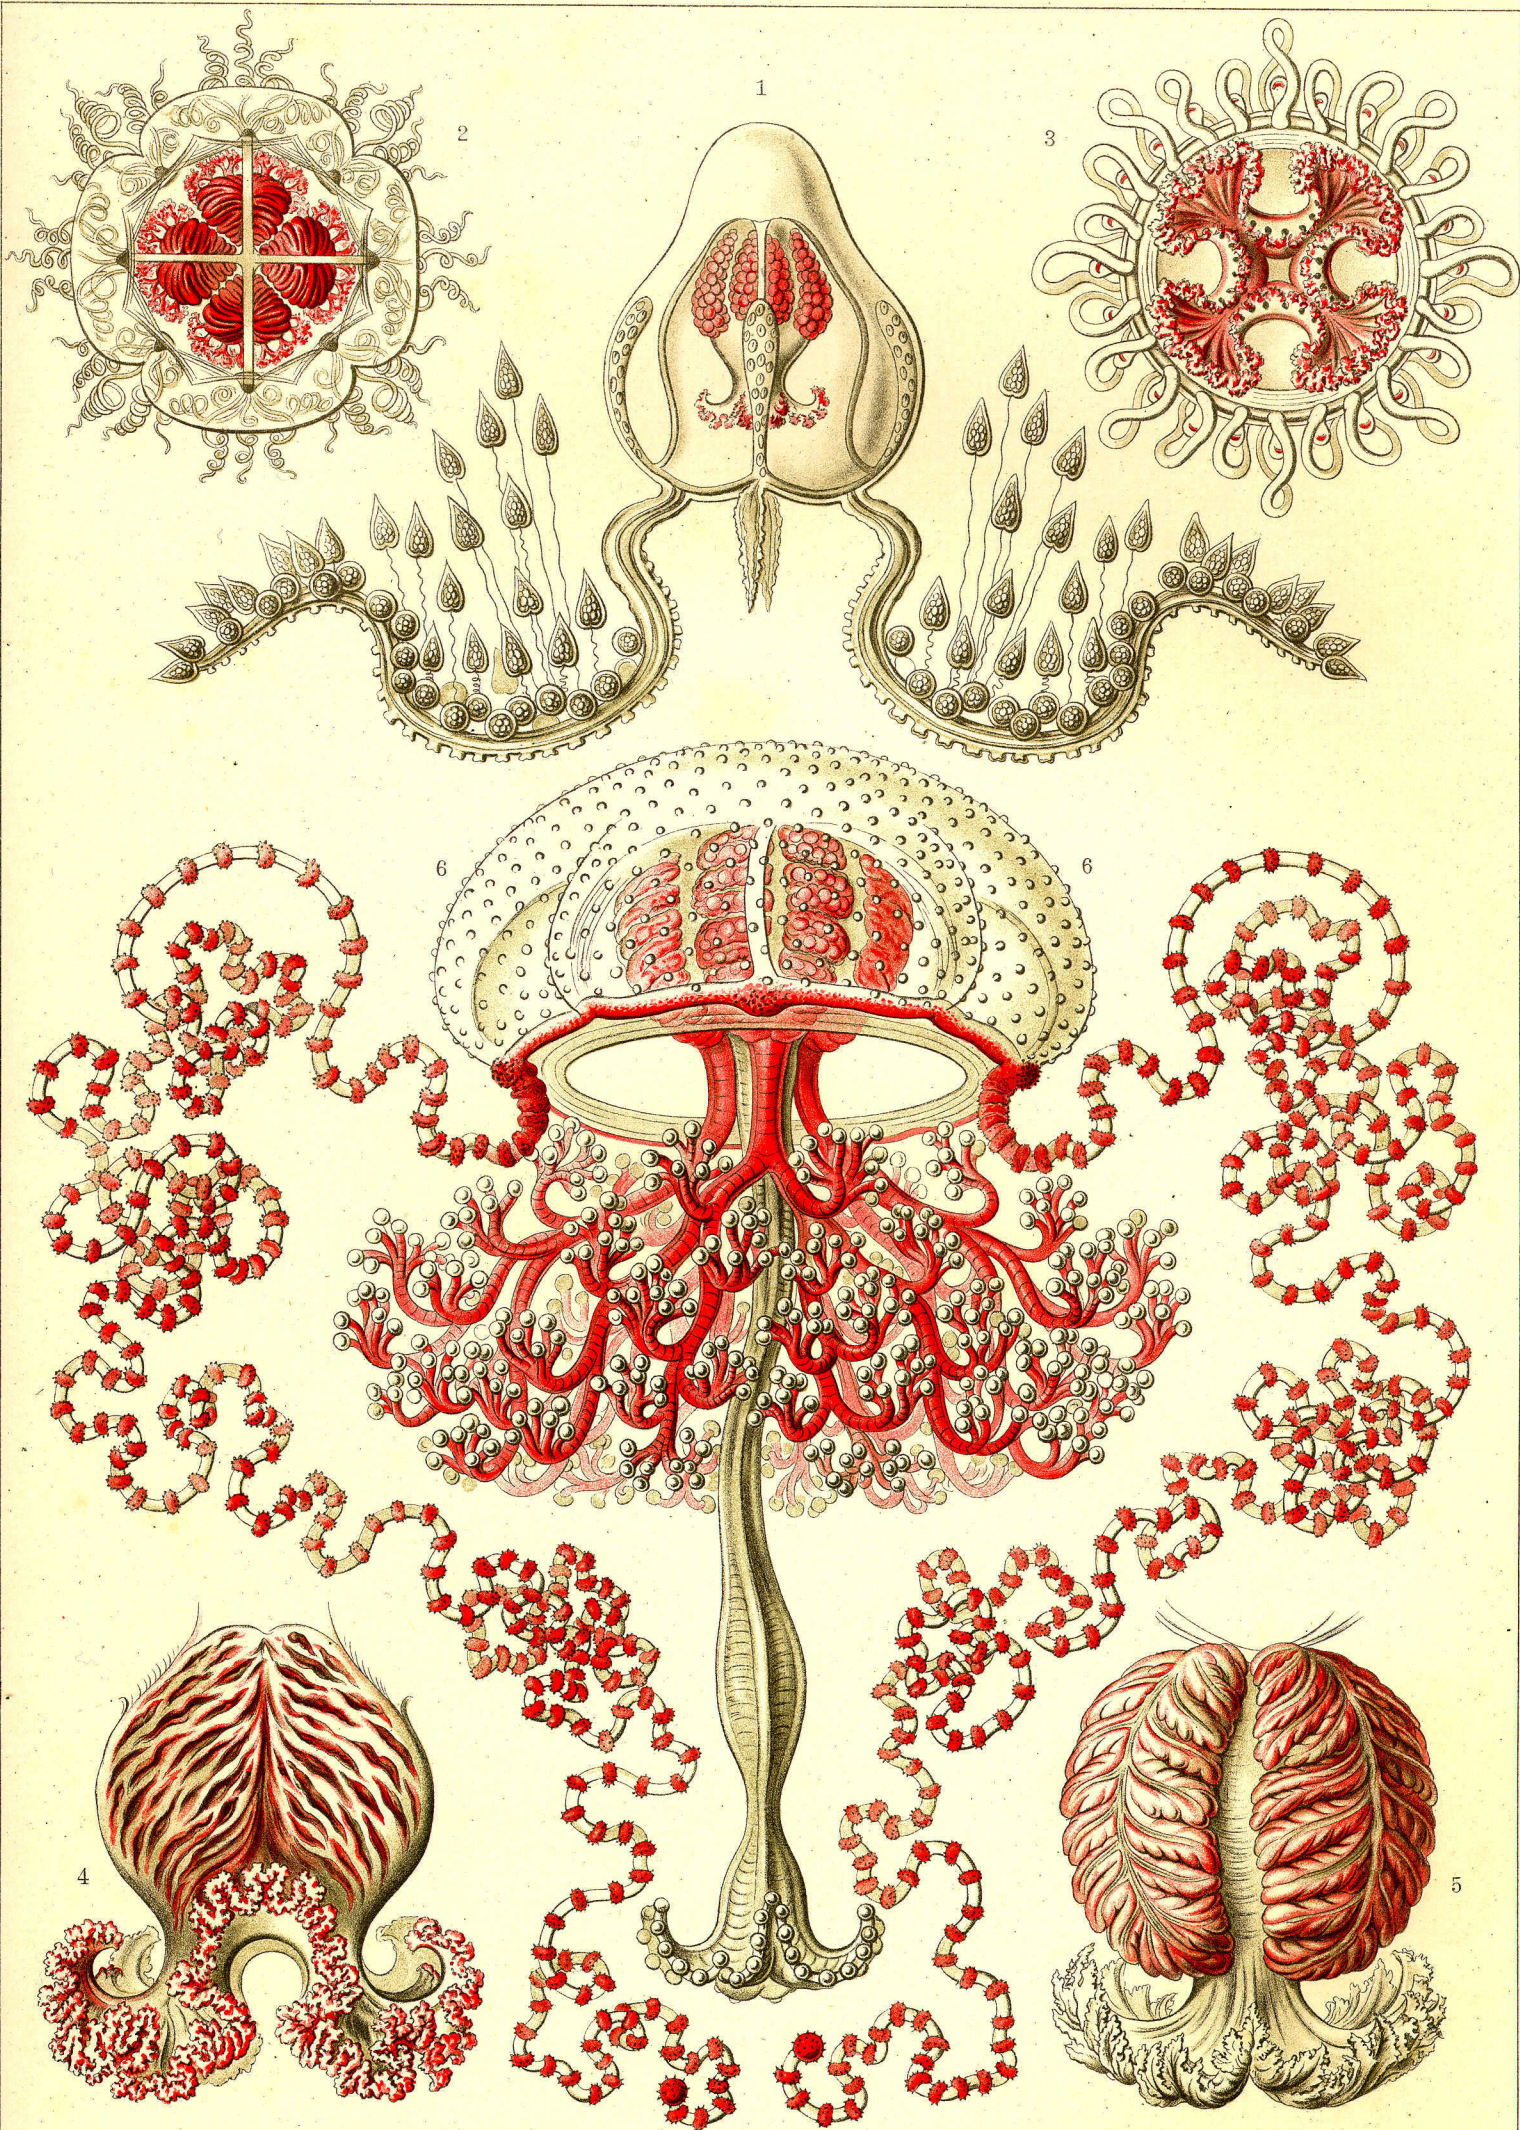

Nudibranchia. — Nacktkiemer-Schnecken.

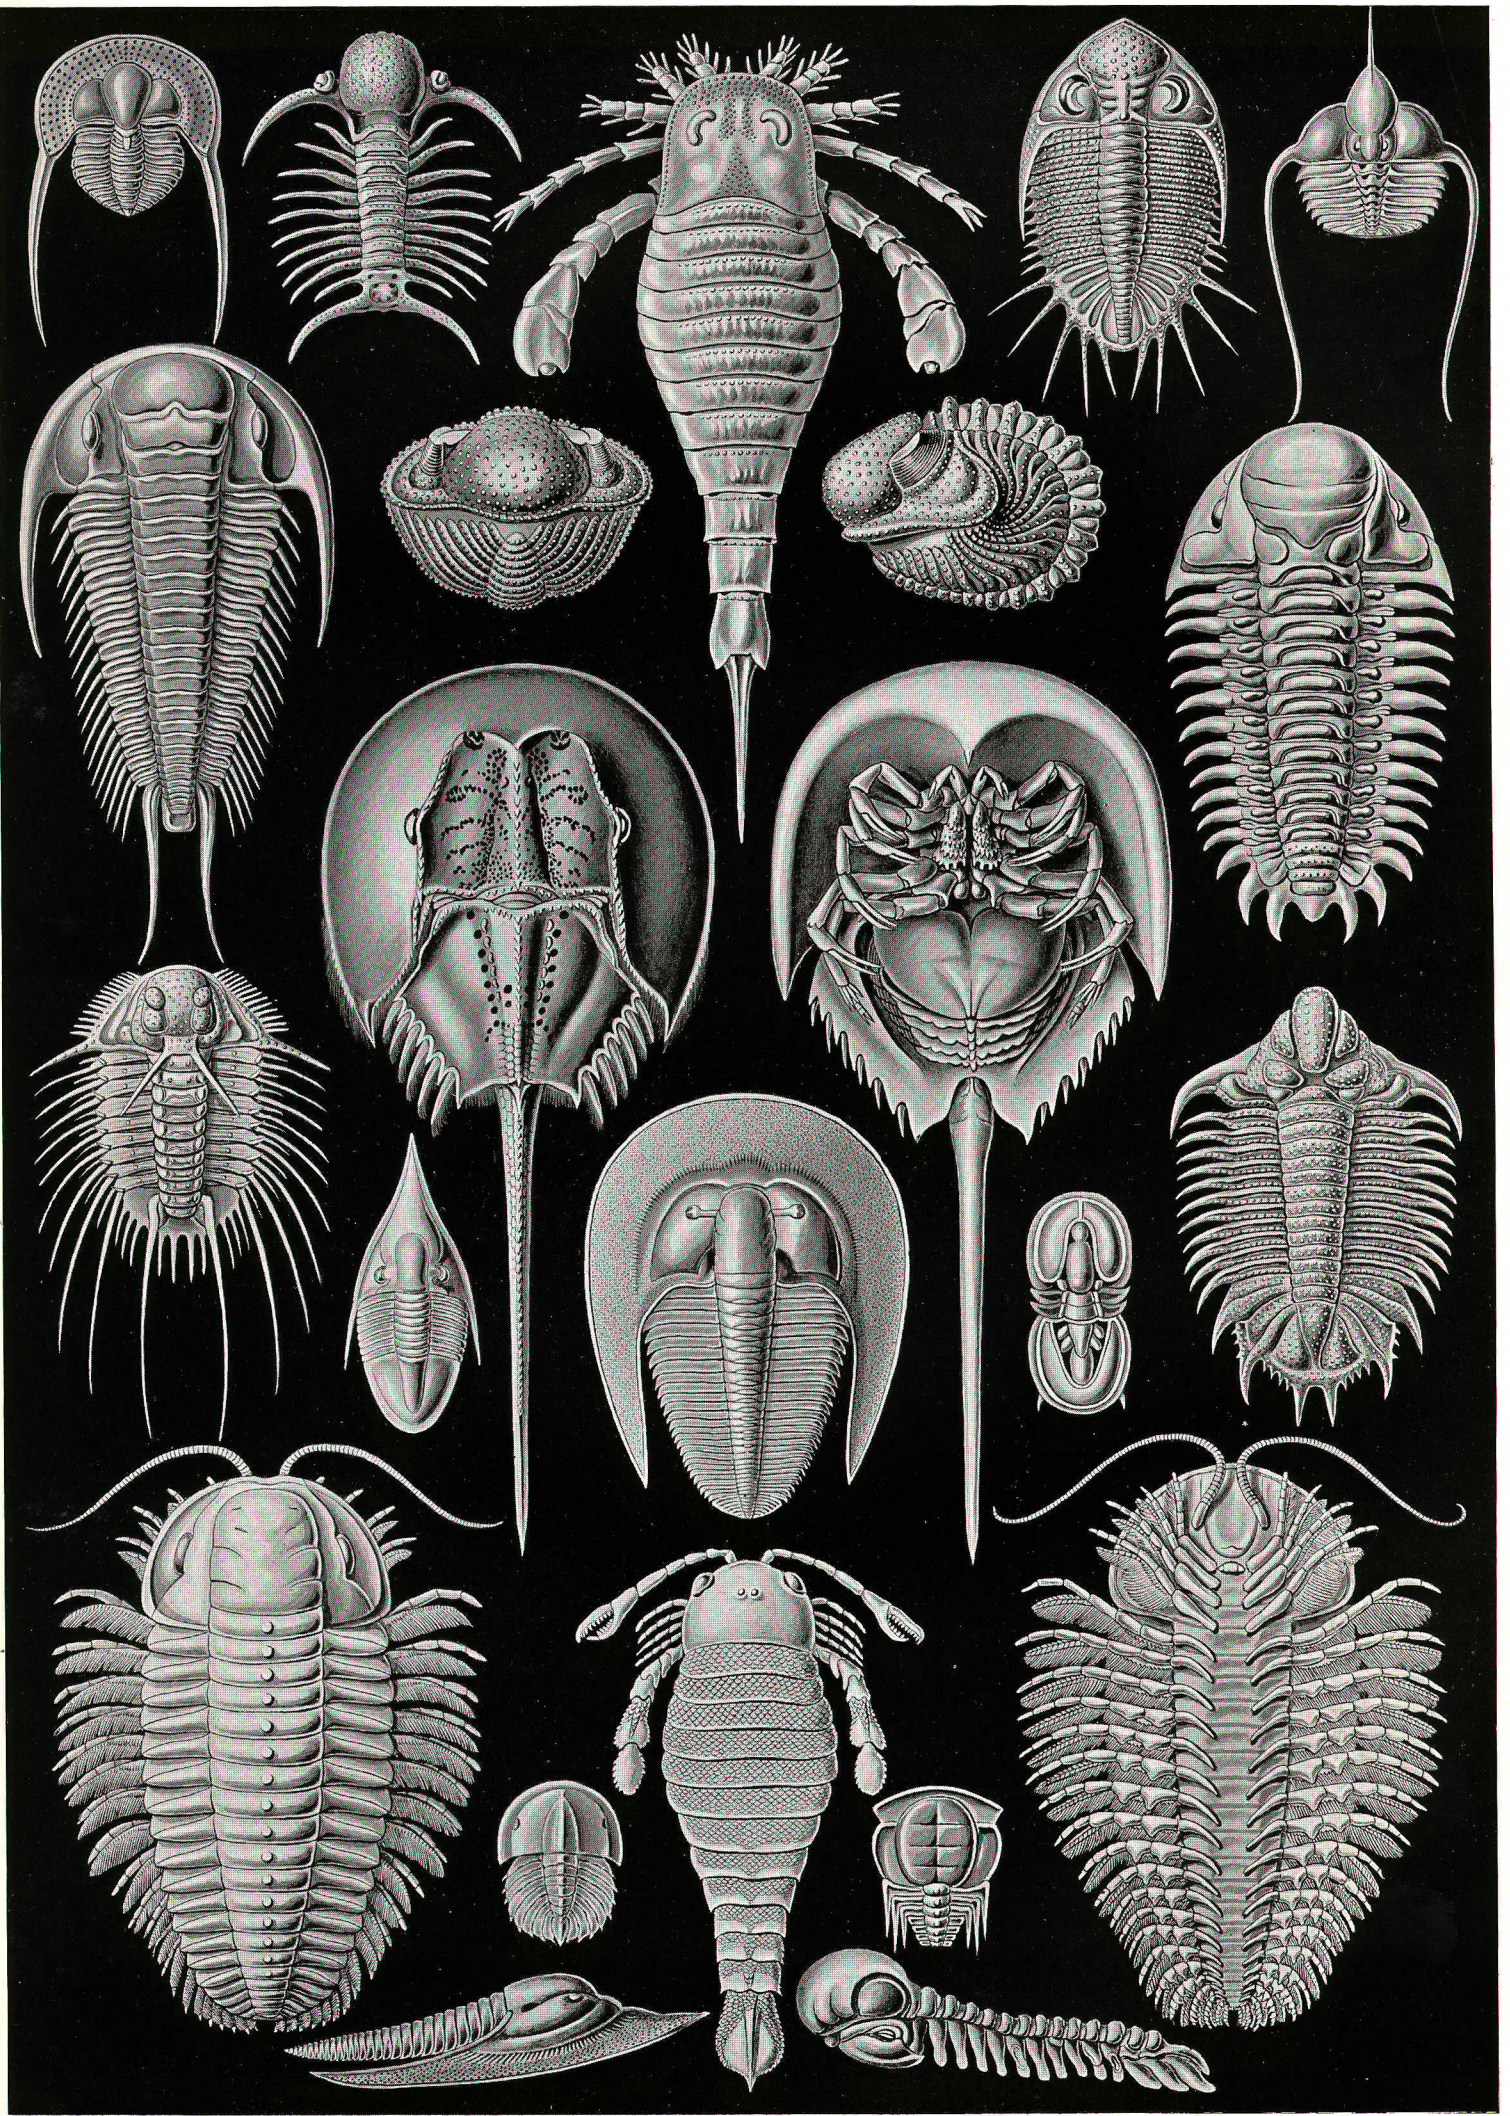

Ammonitida. — Ammonshörner.

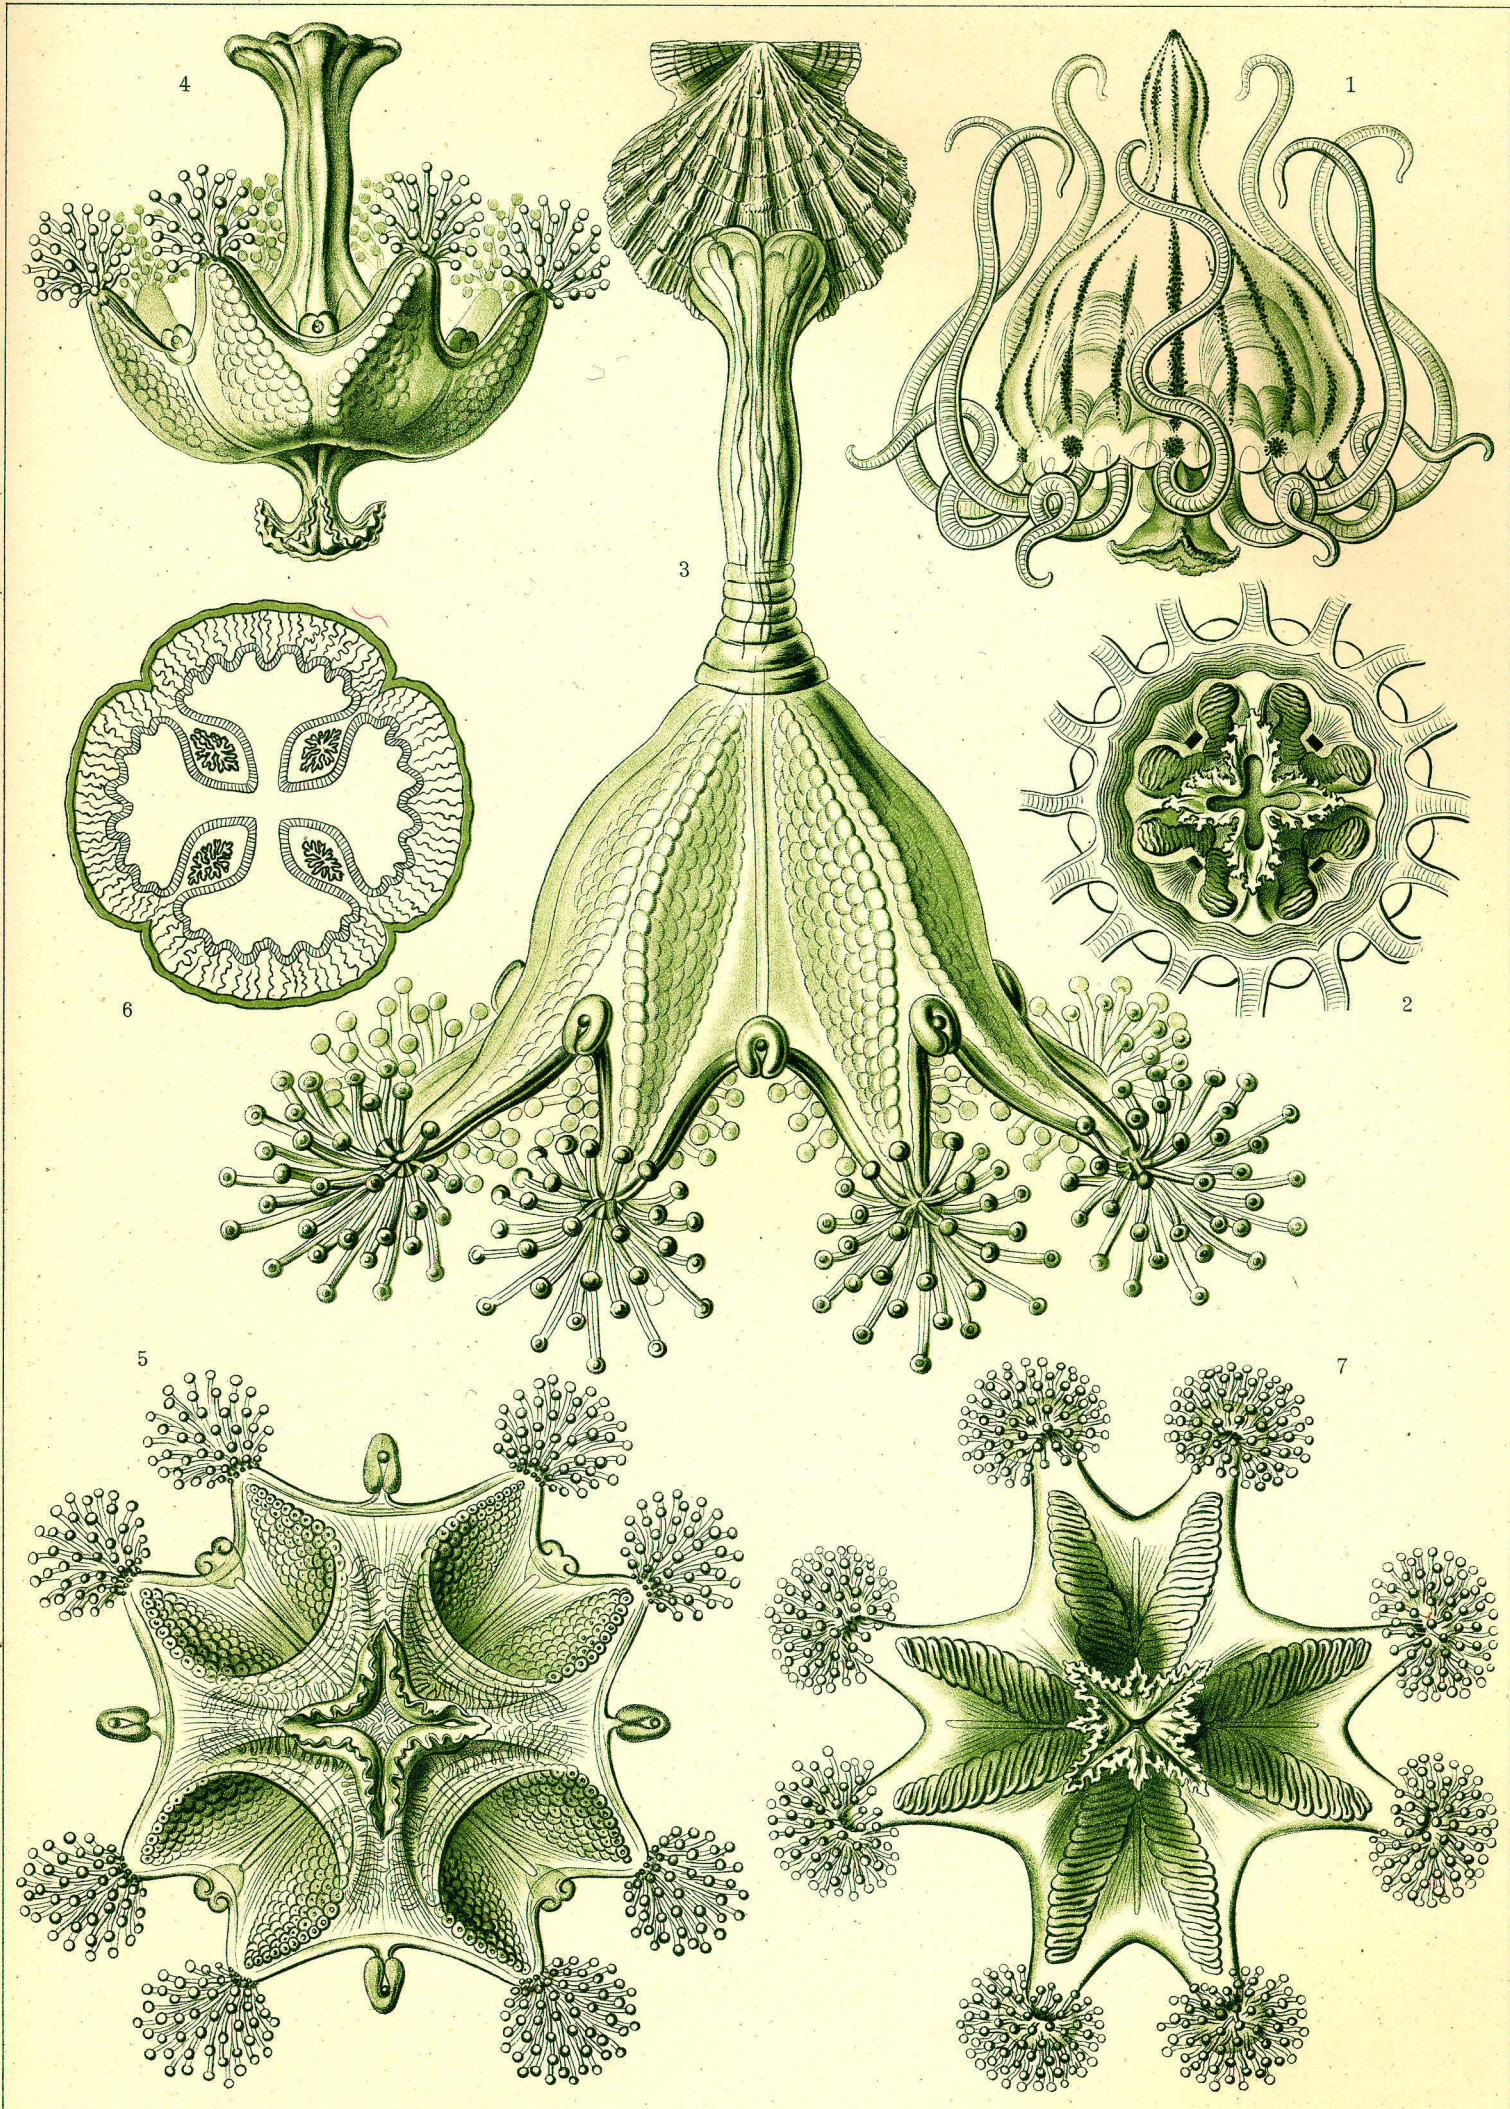

Campanariae. — Glockenpolypen.

Anthomedusae. — Blumenquassen.

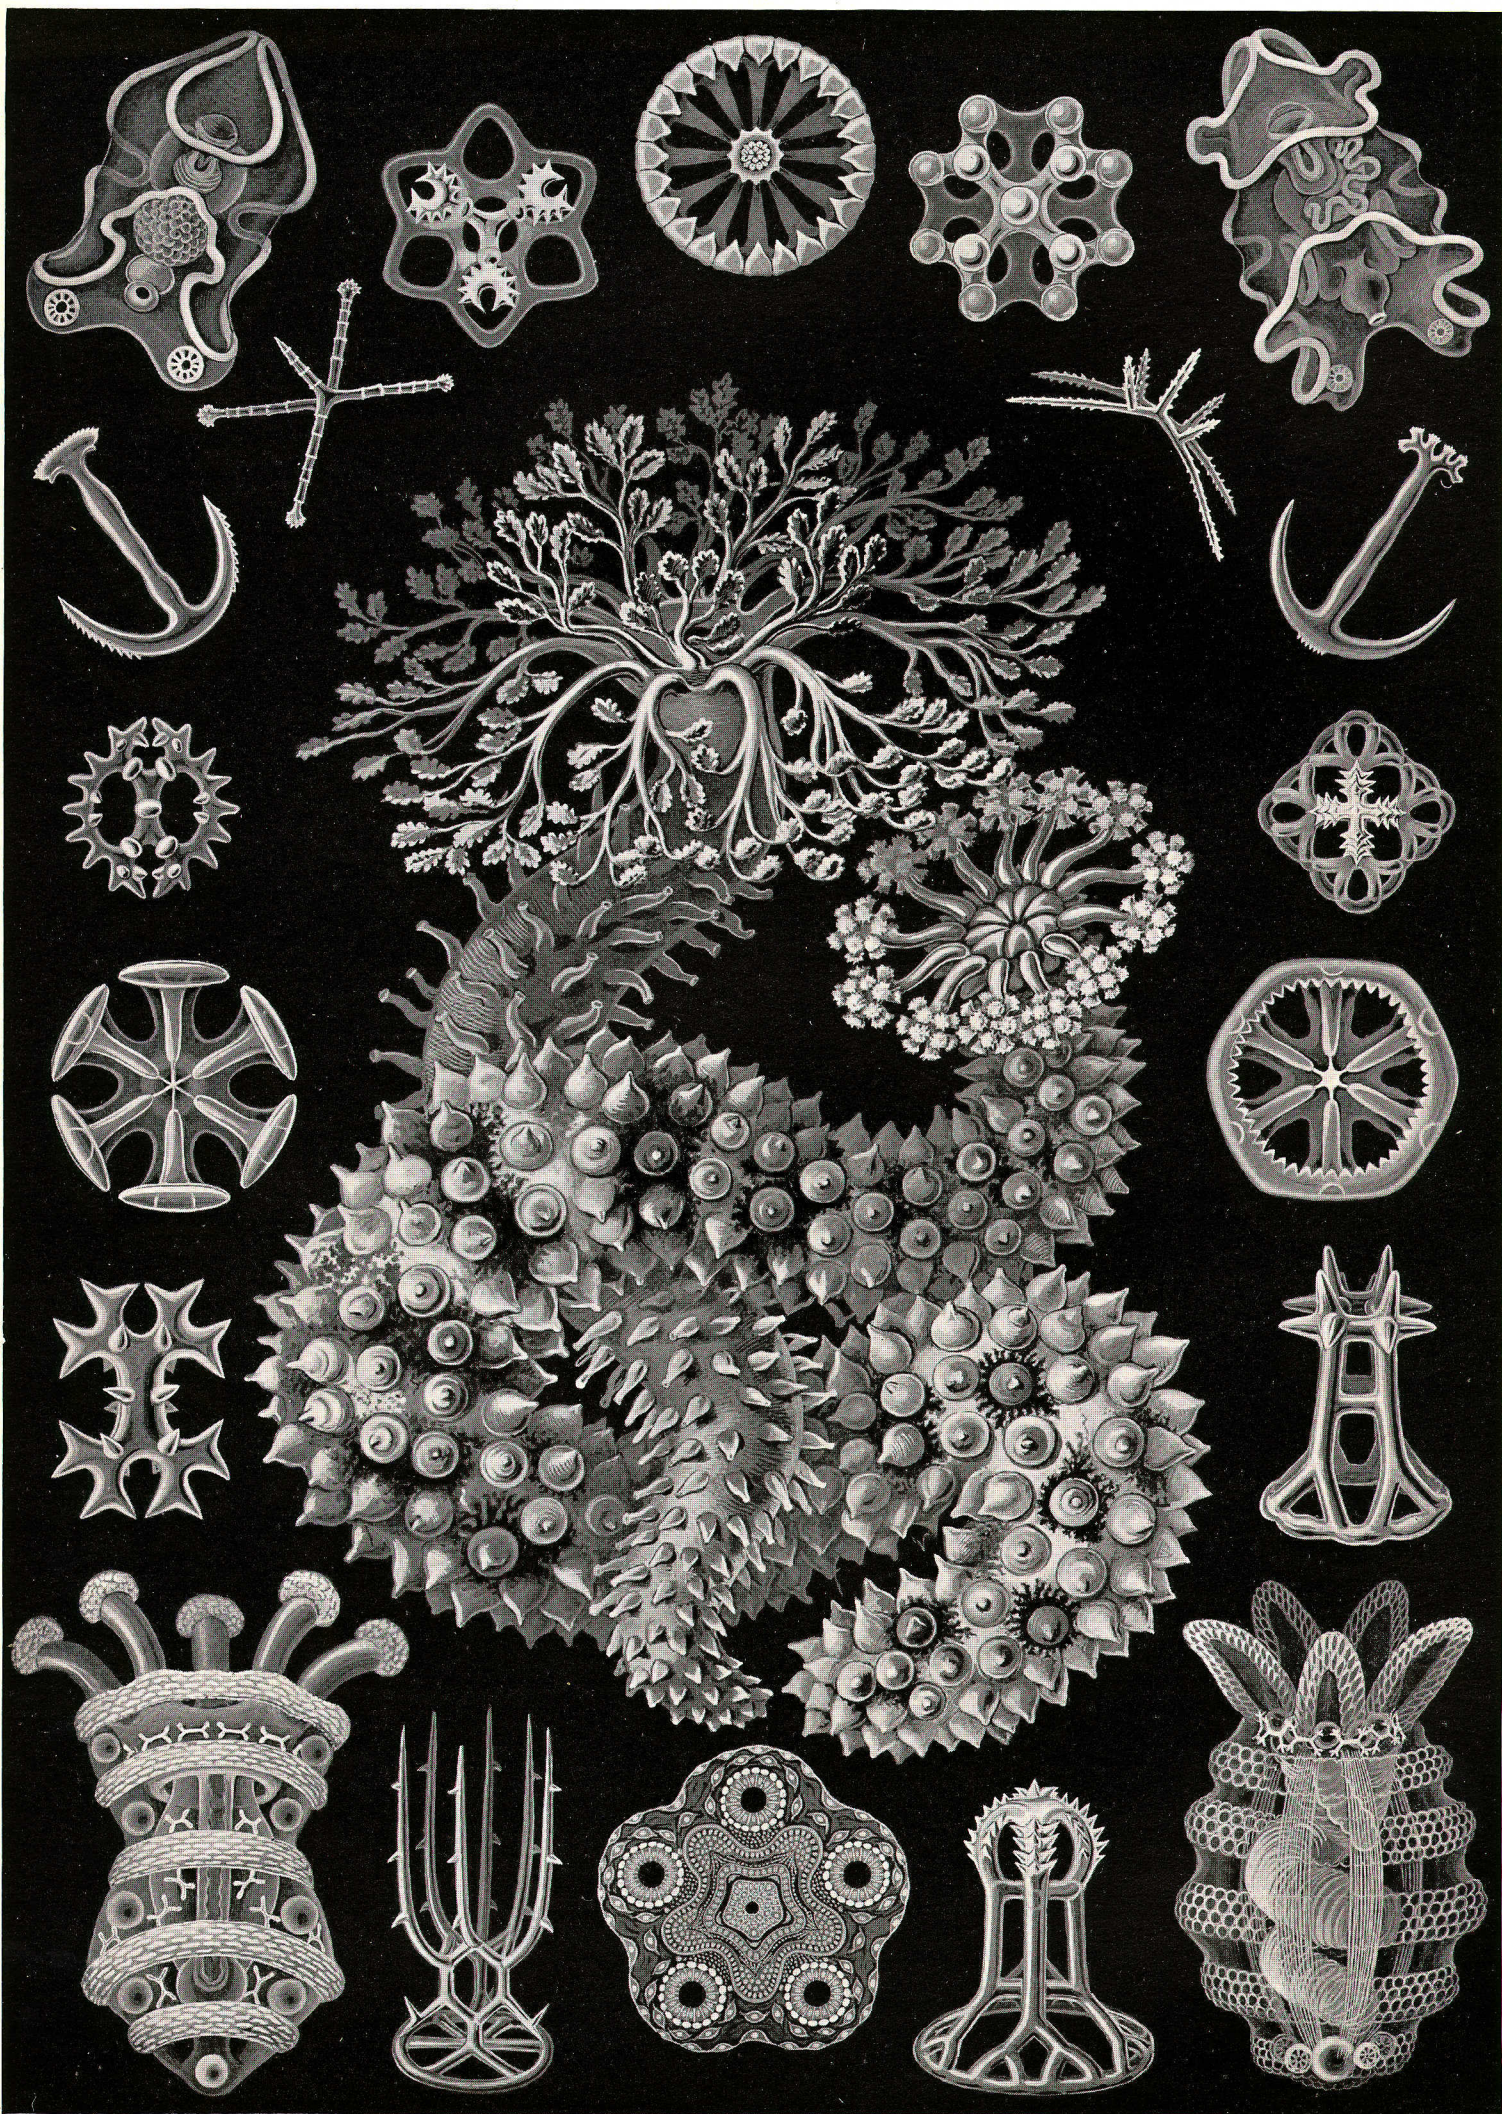

Aspidonia. — Schildtiere.

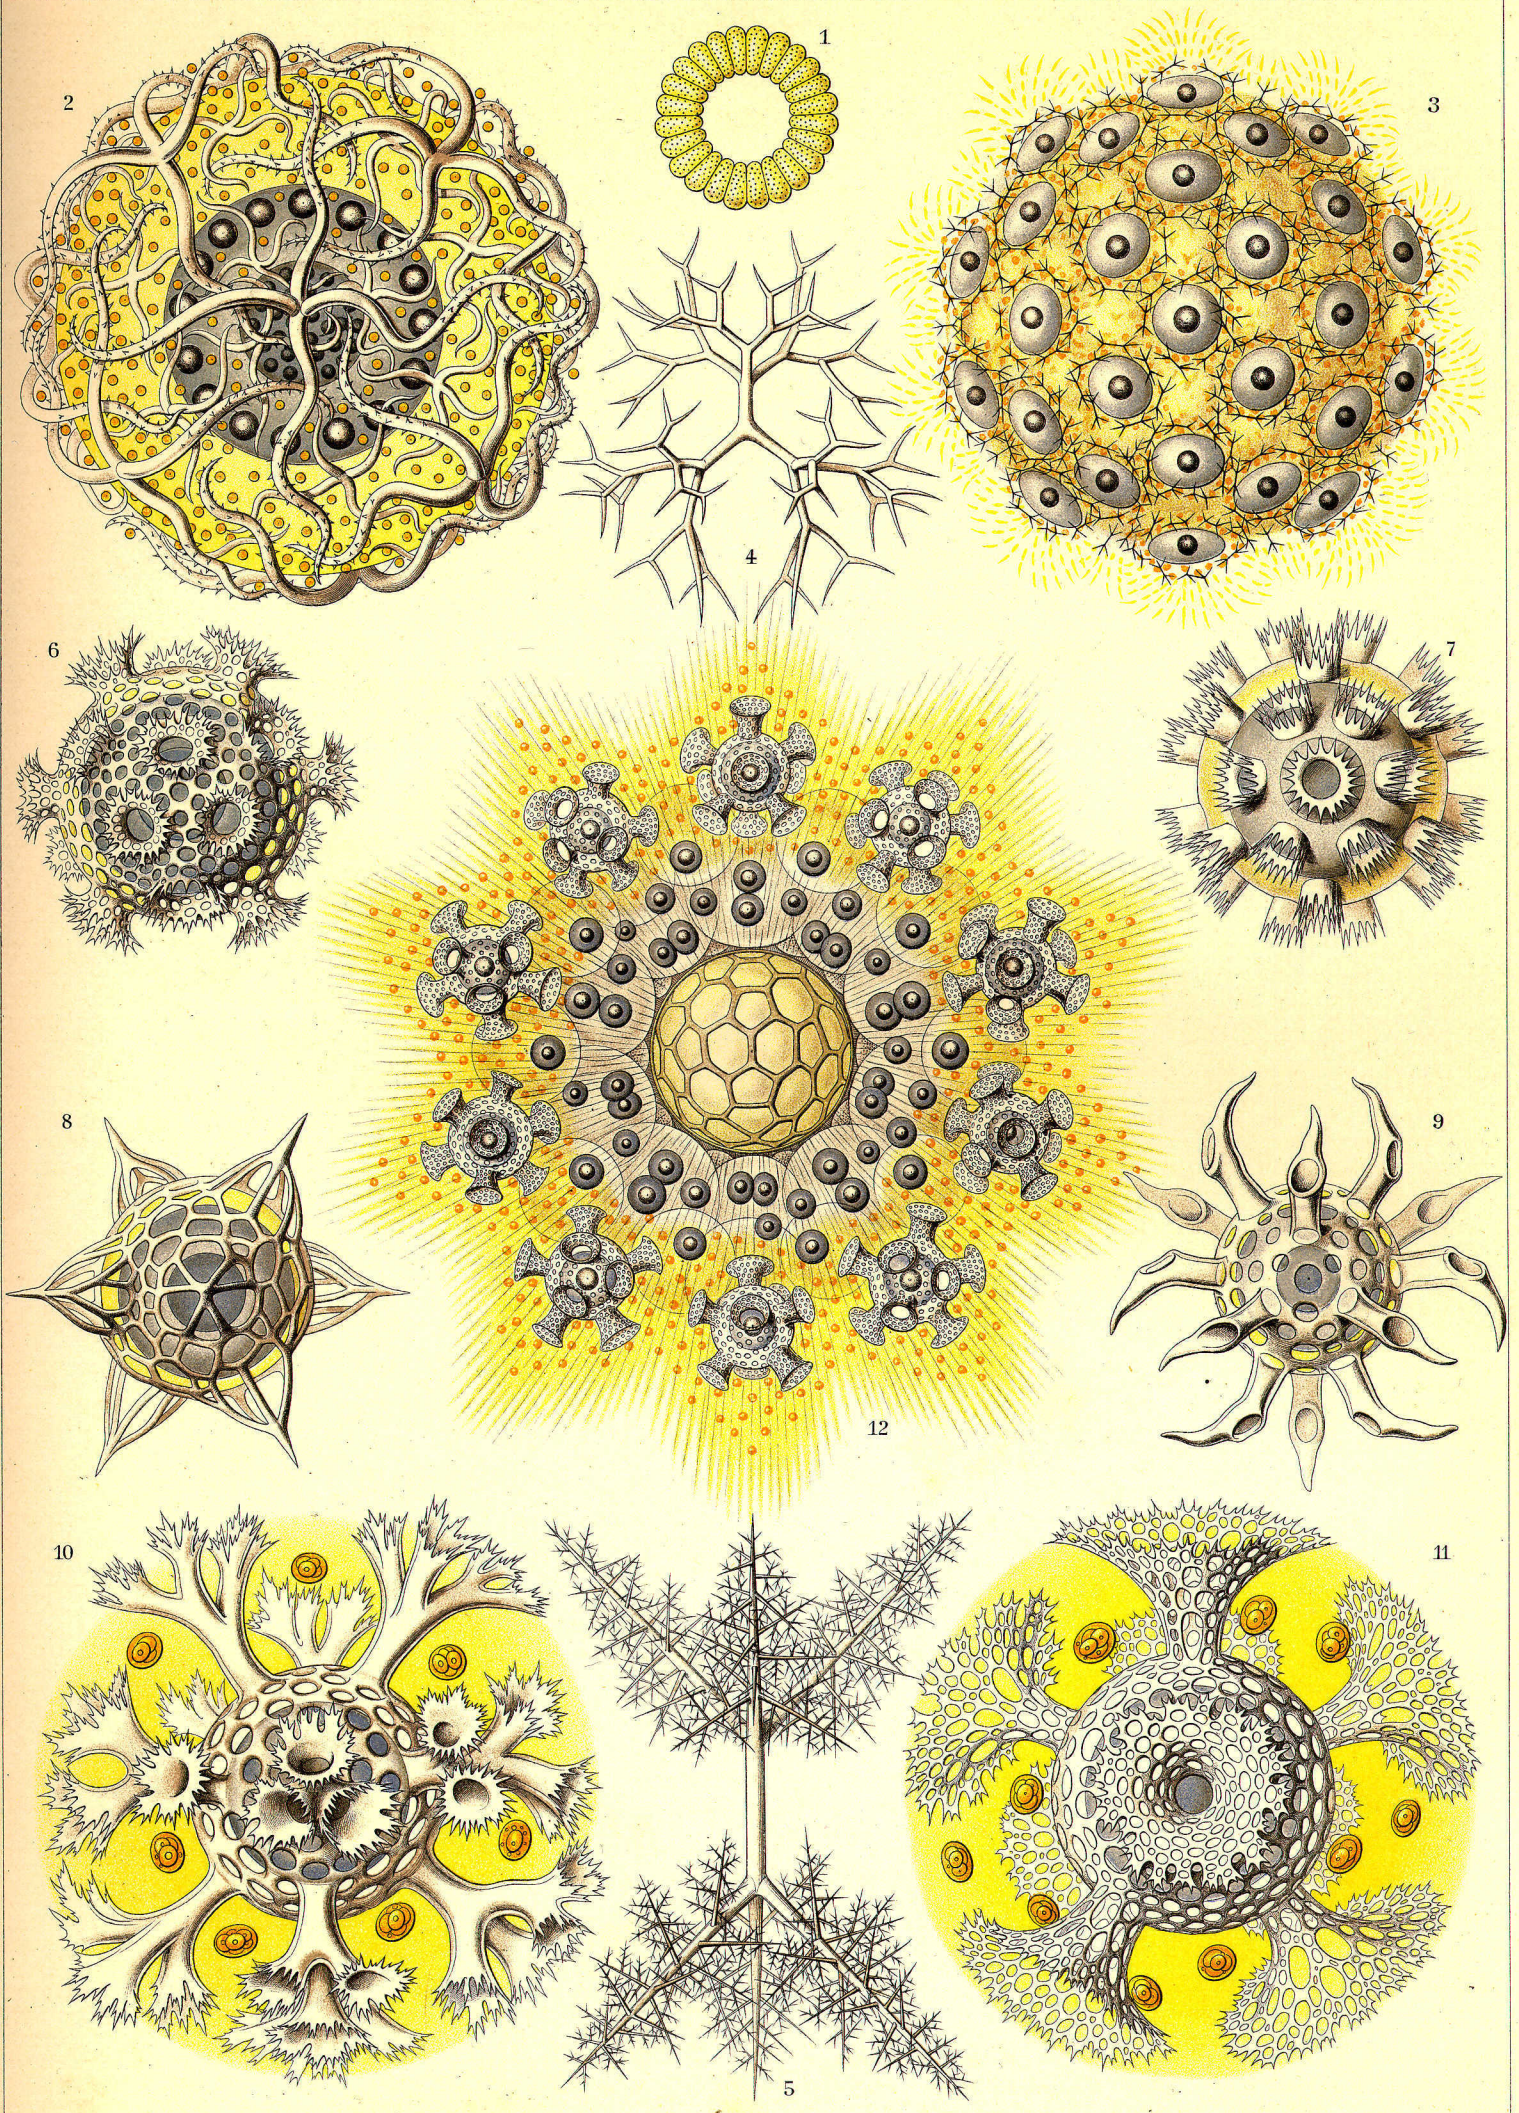

Stauromedusae. — Becherquallen.

Actiniae. — Seeanemonen.

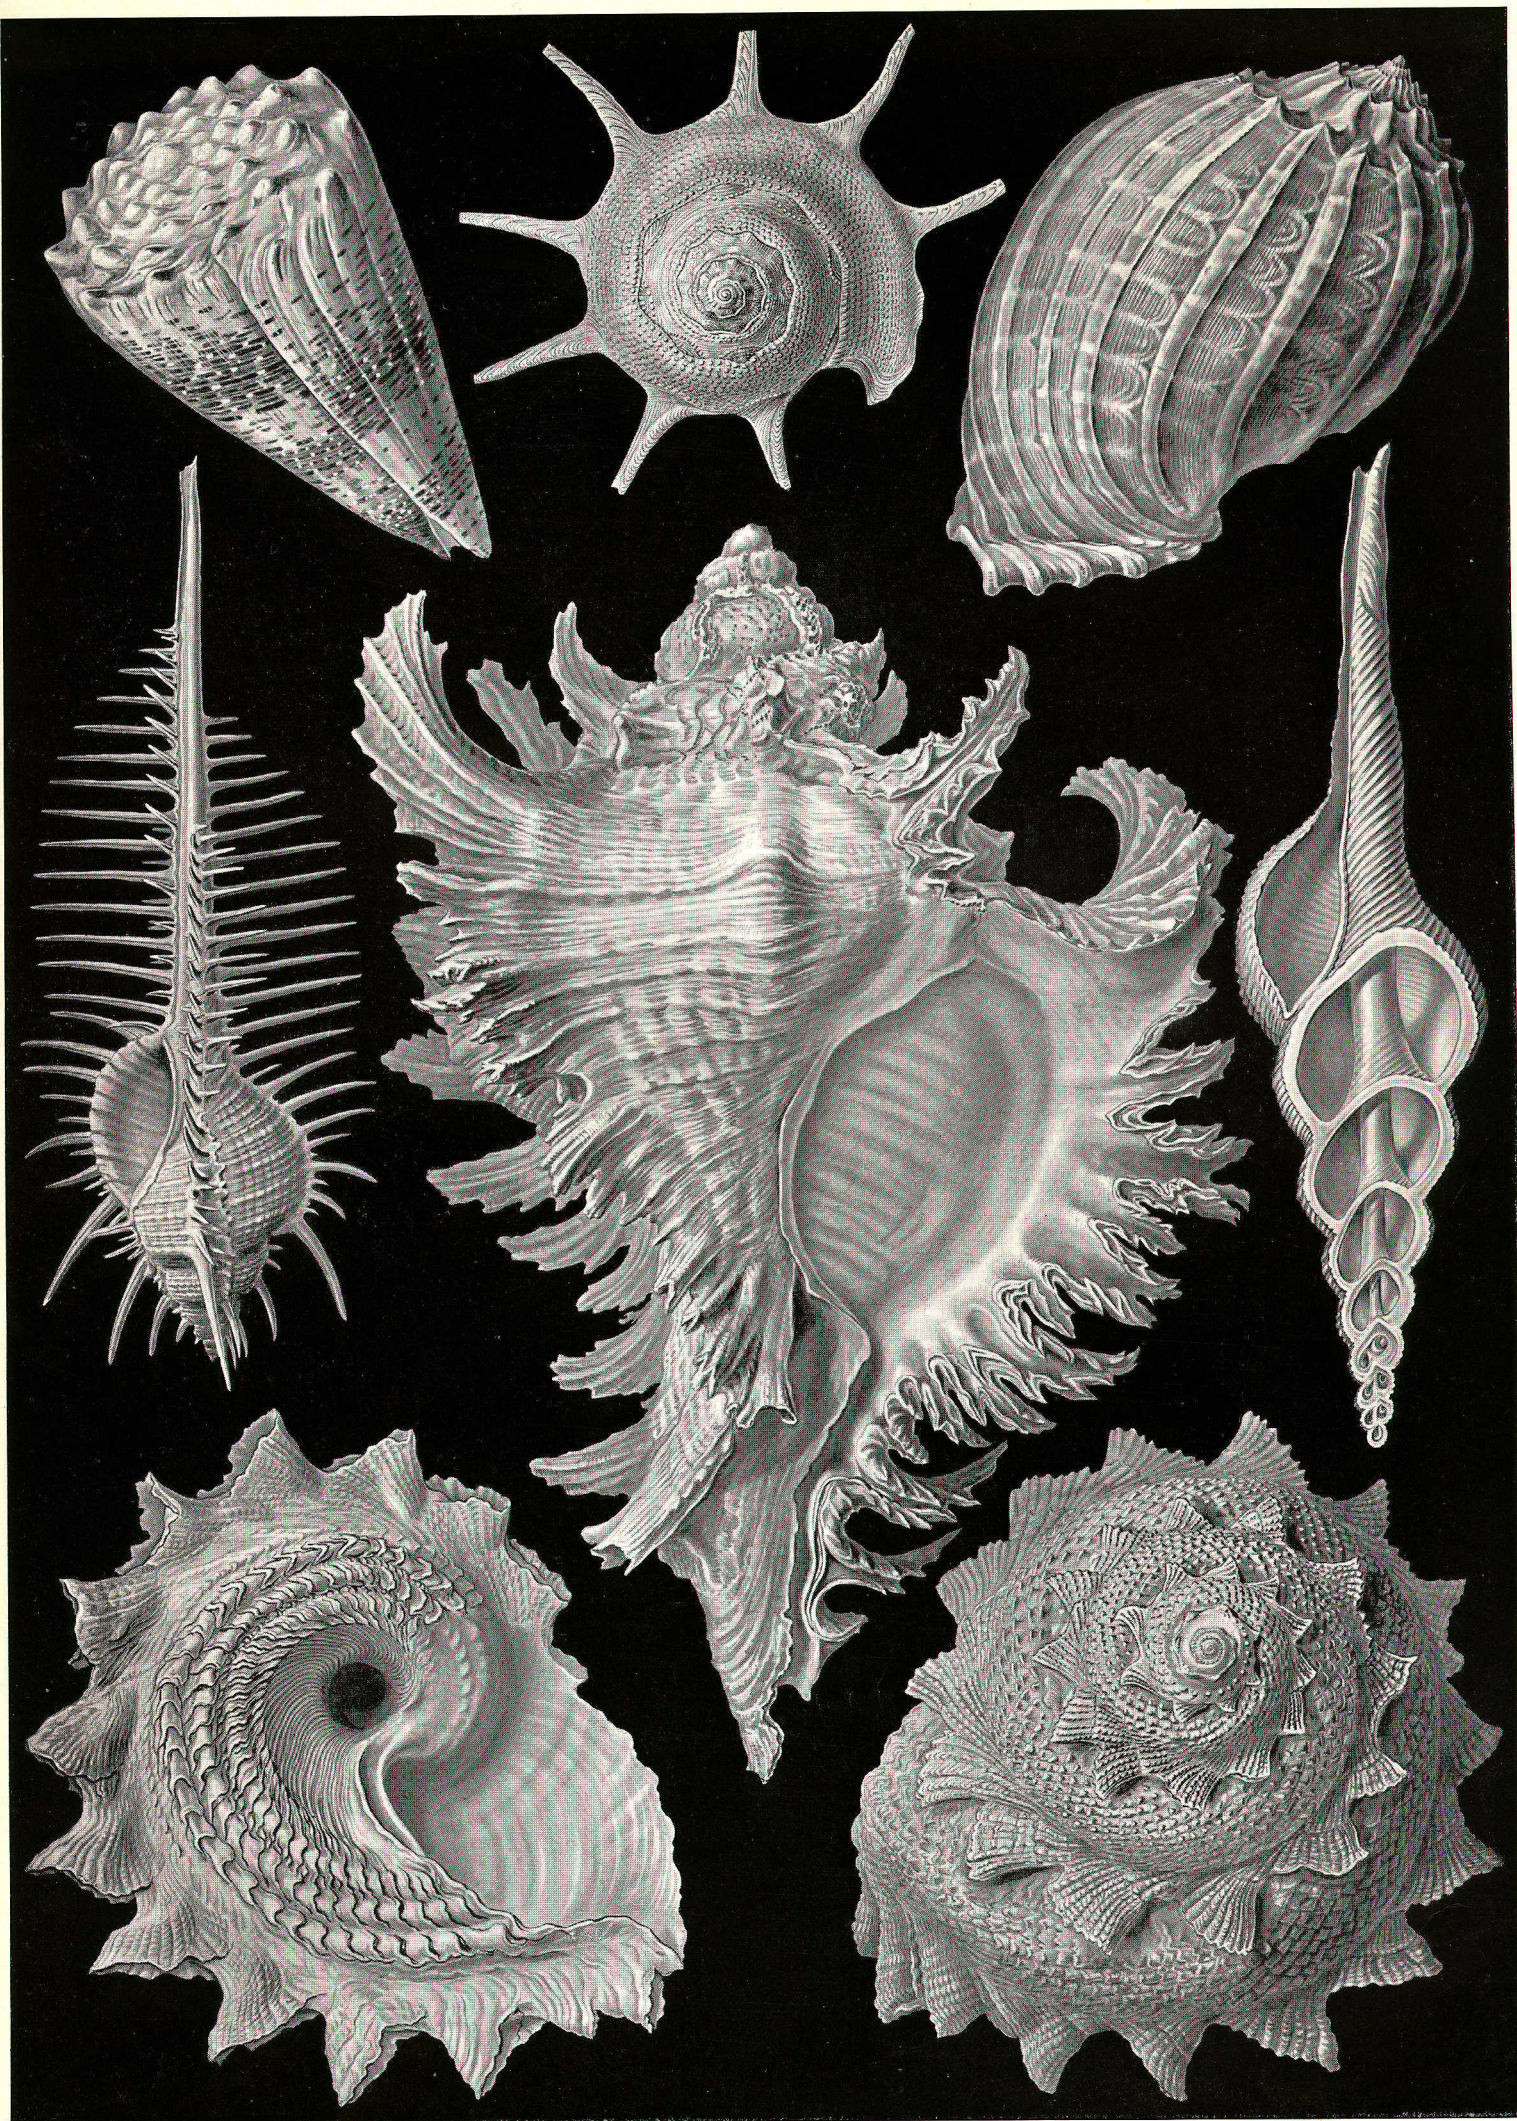

Thuroidea. — Gurkensterne.

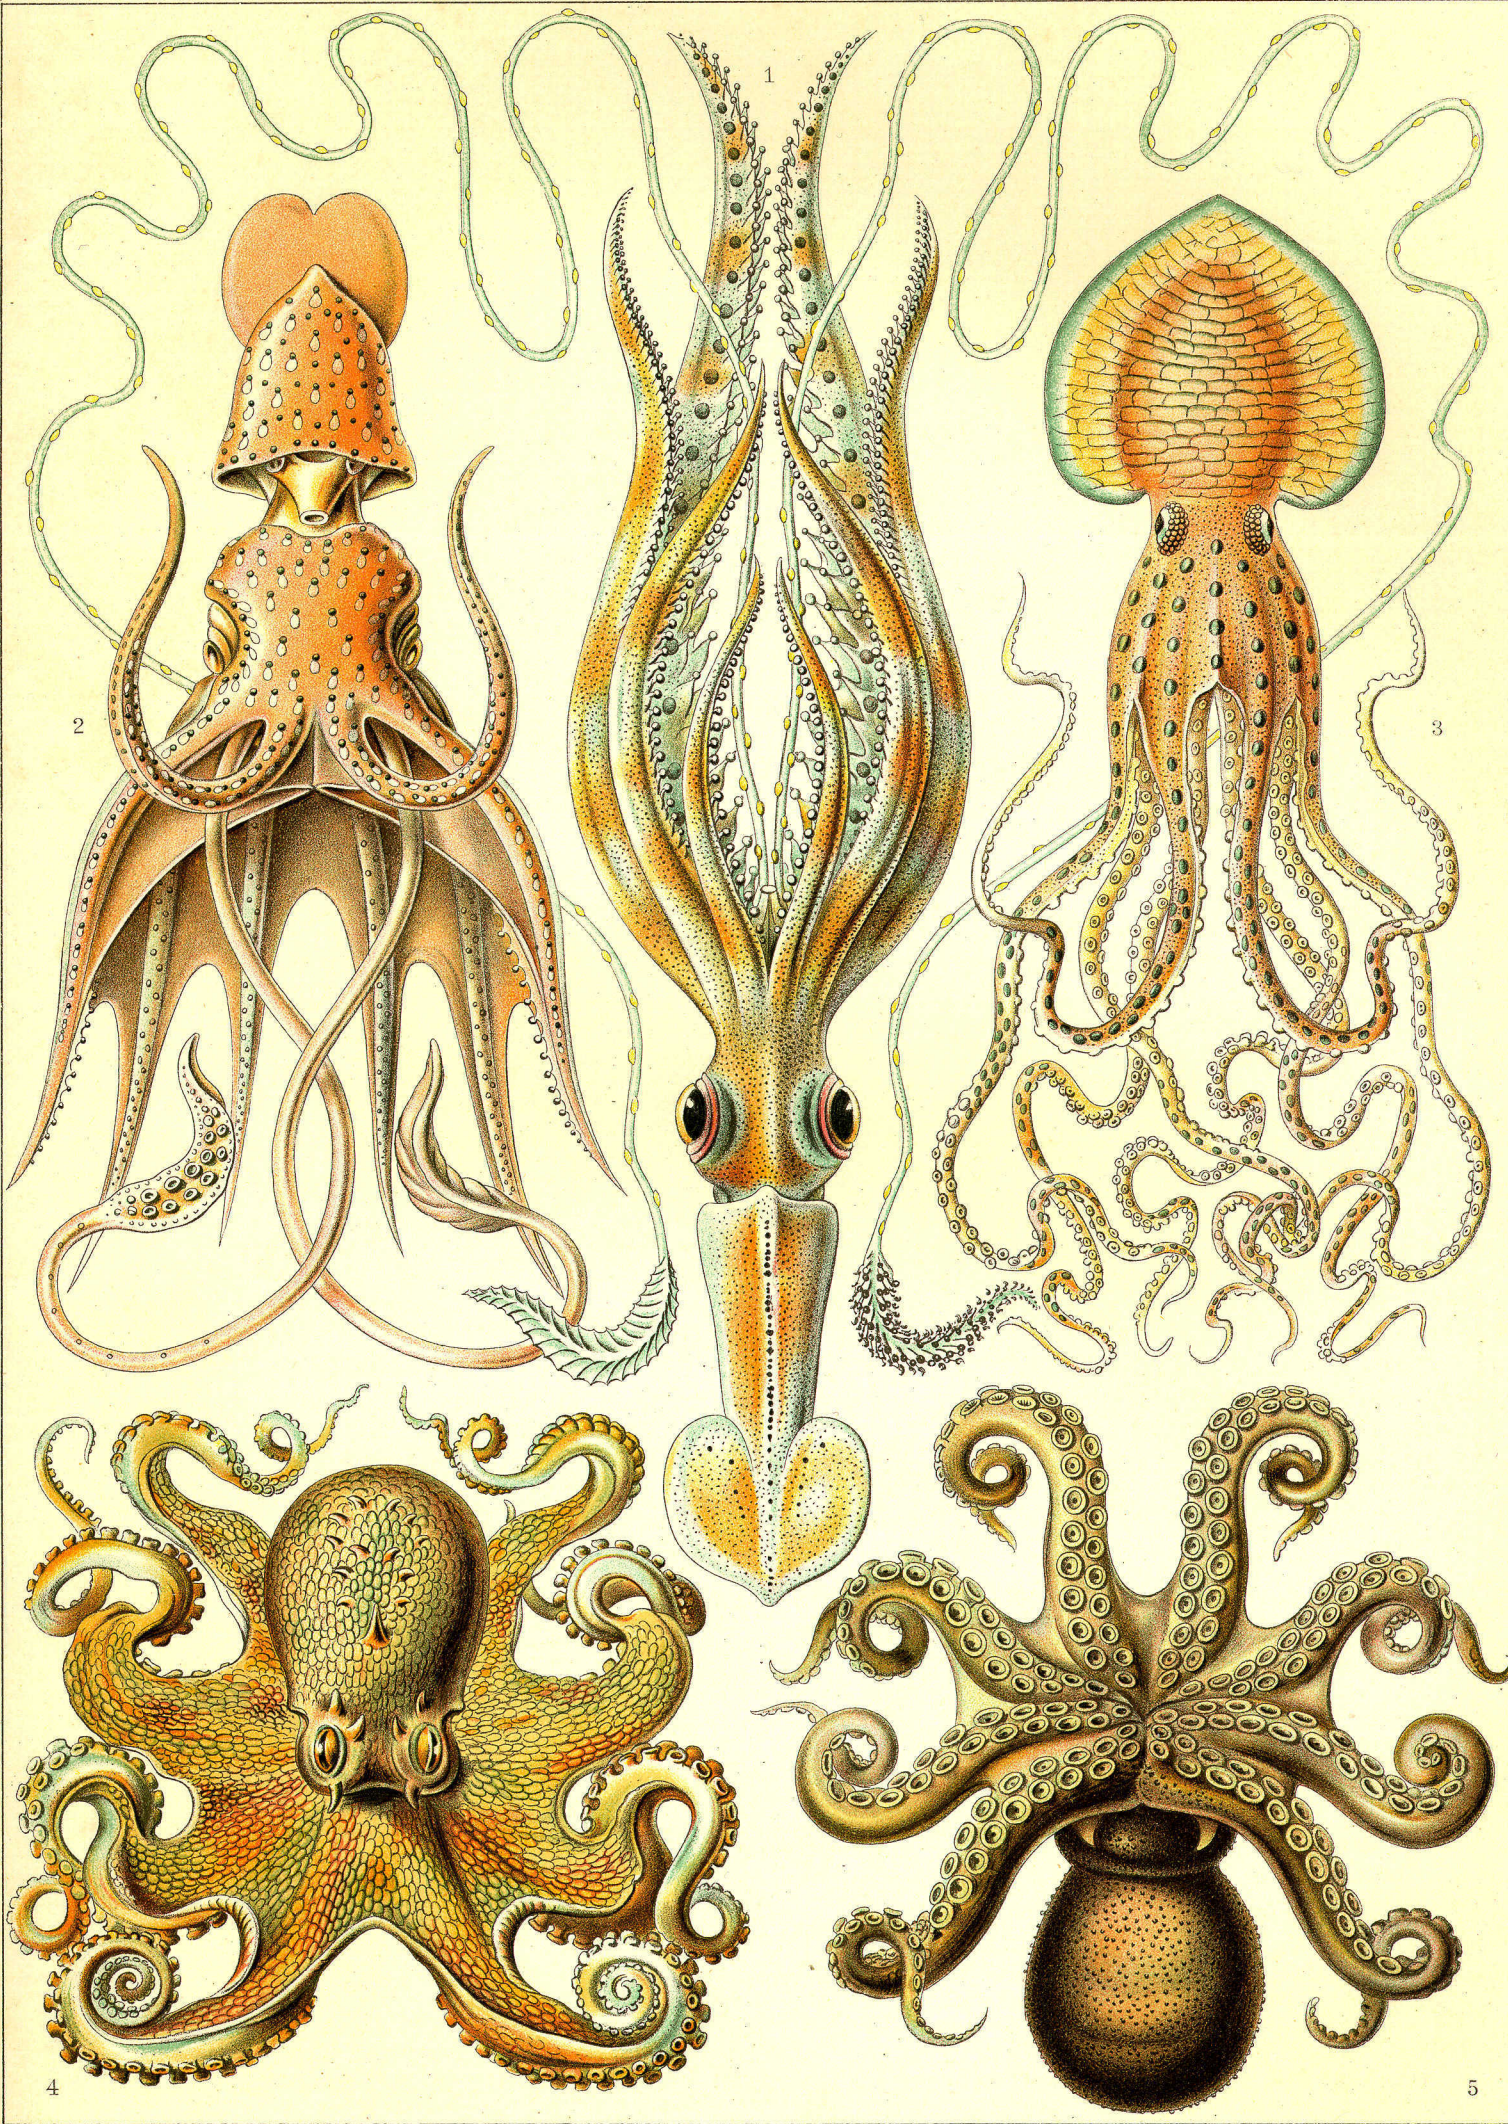

Polycyttaria. — Vereins-Strahllinge.

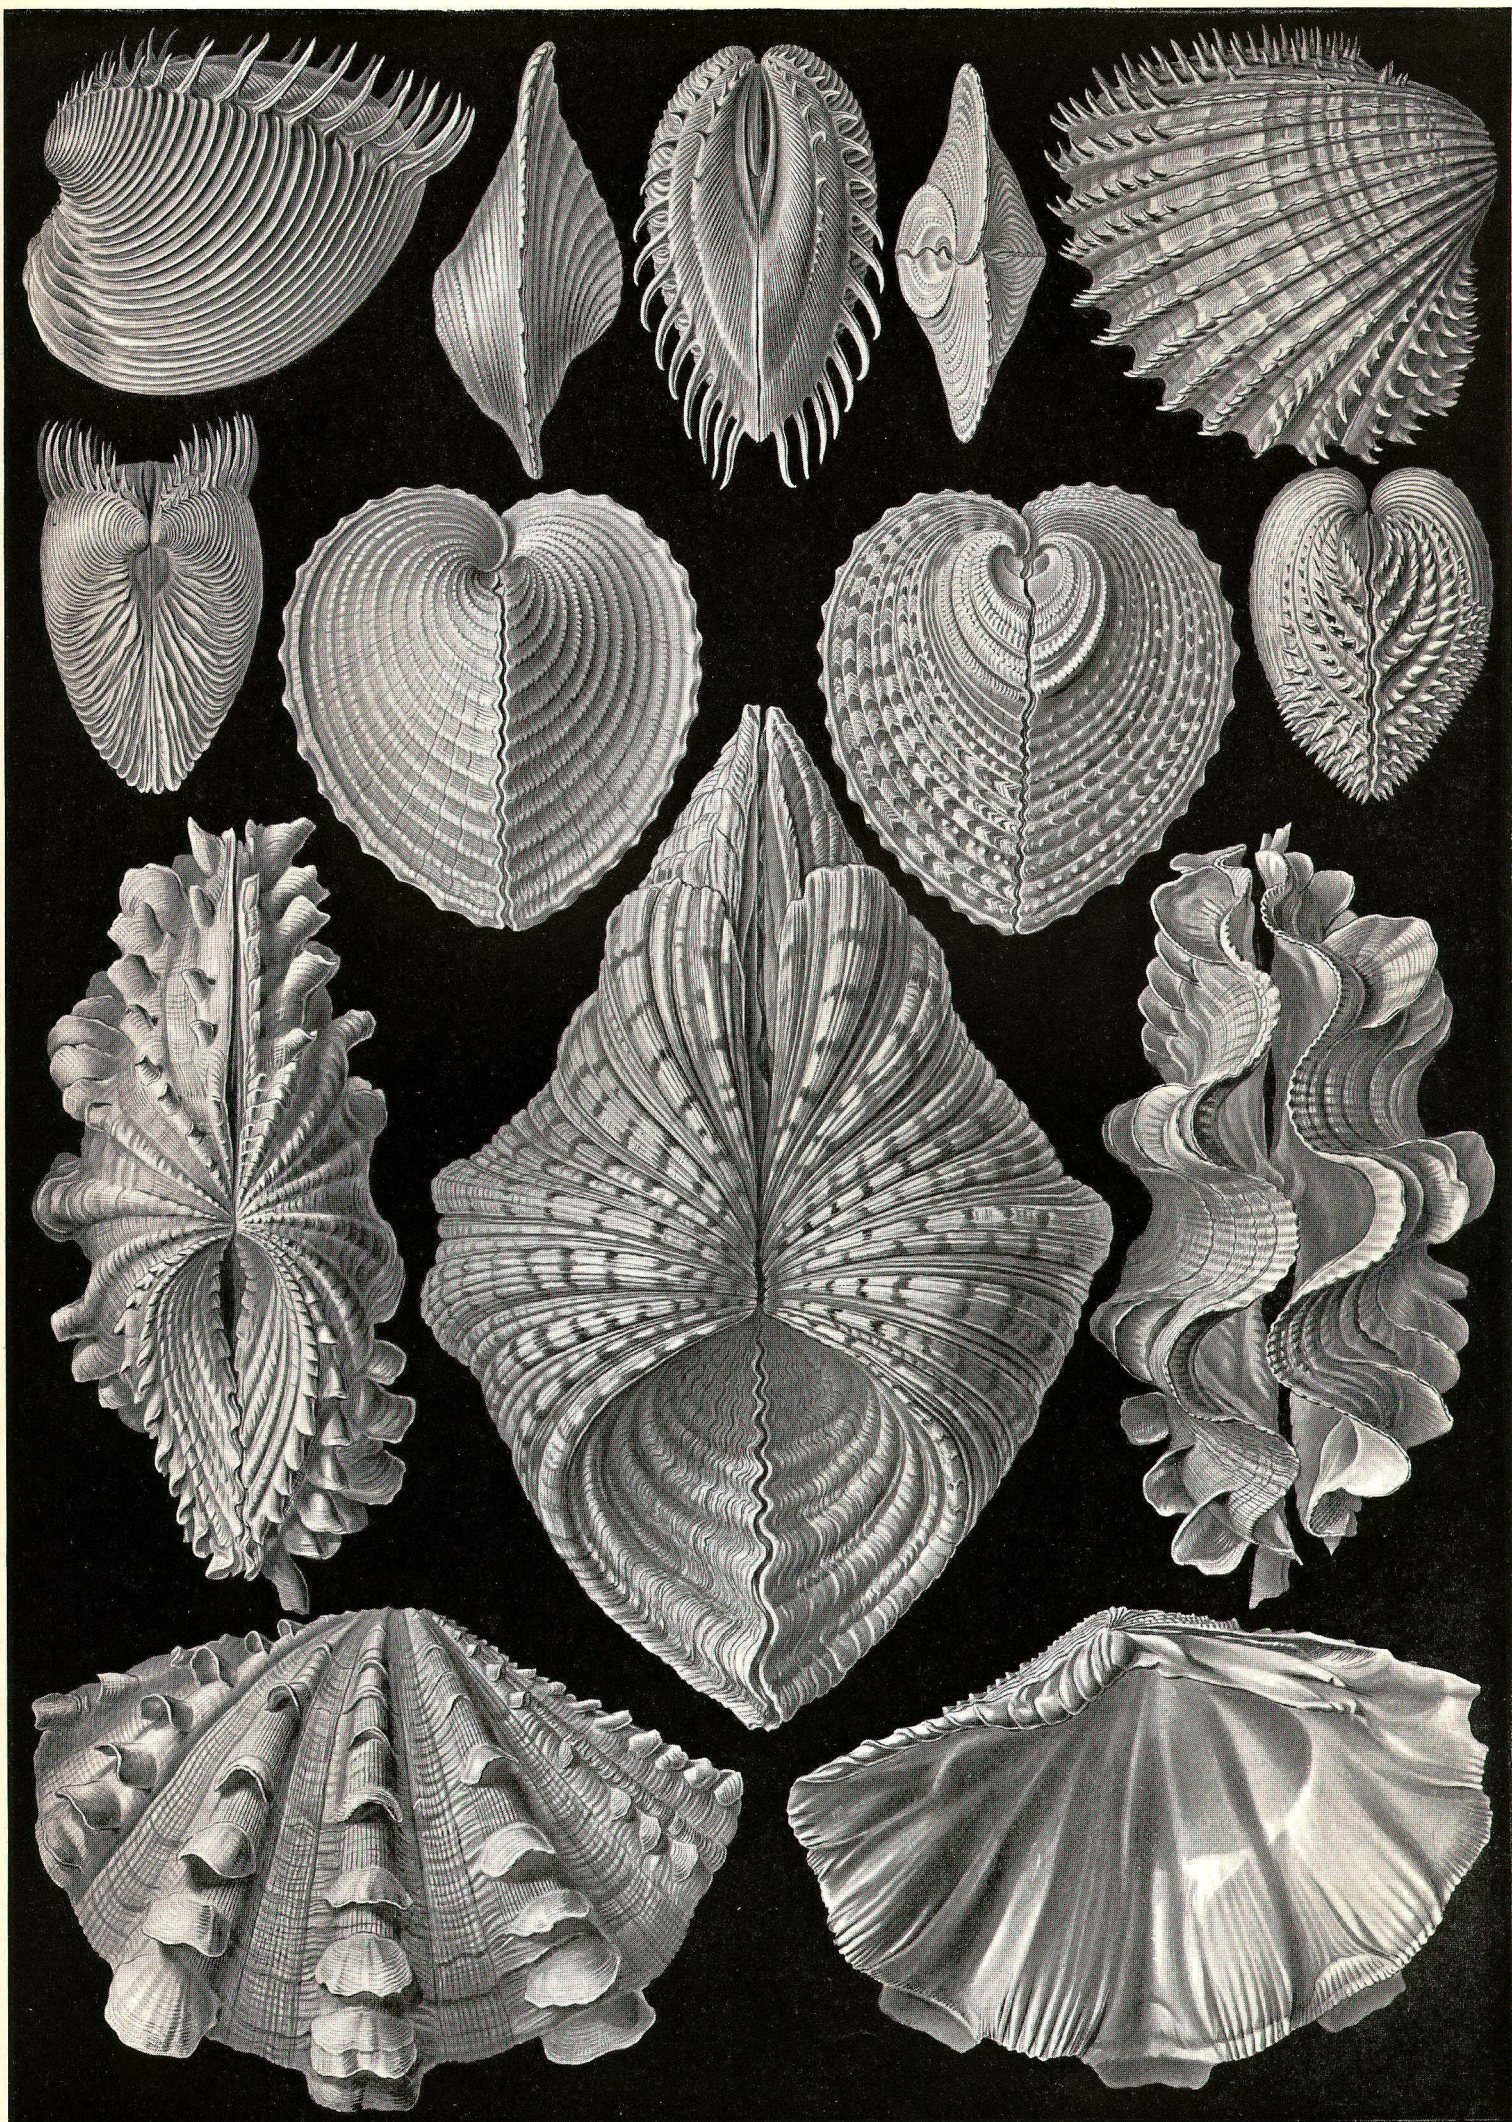

Filicinae. — Laubfarne.

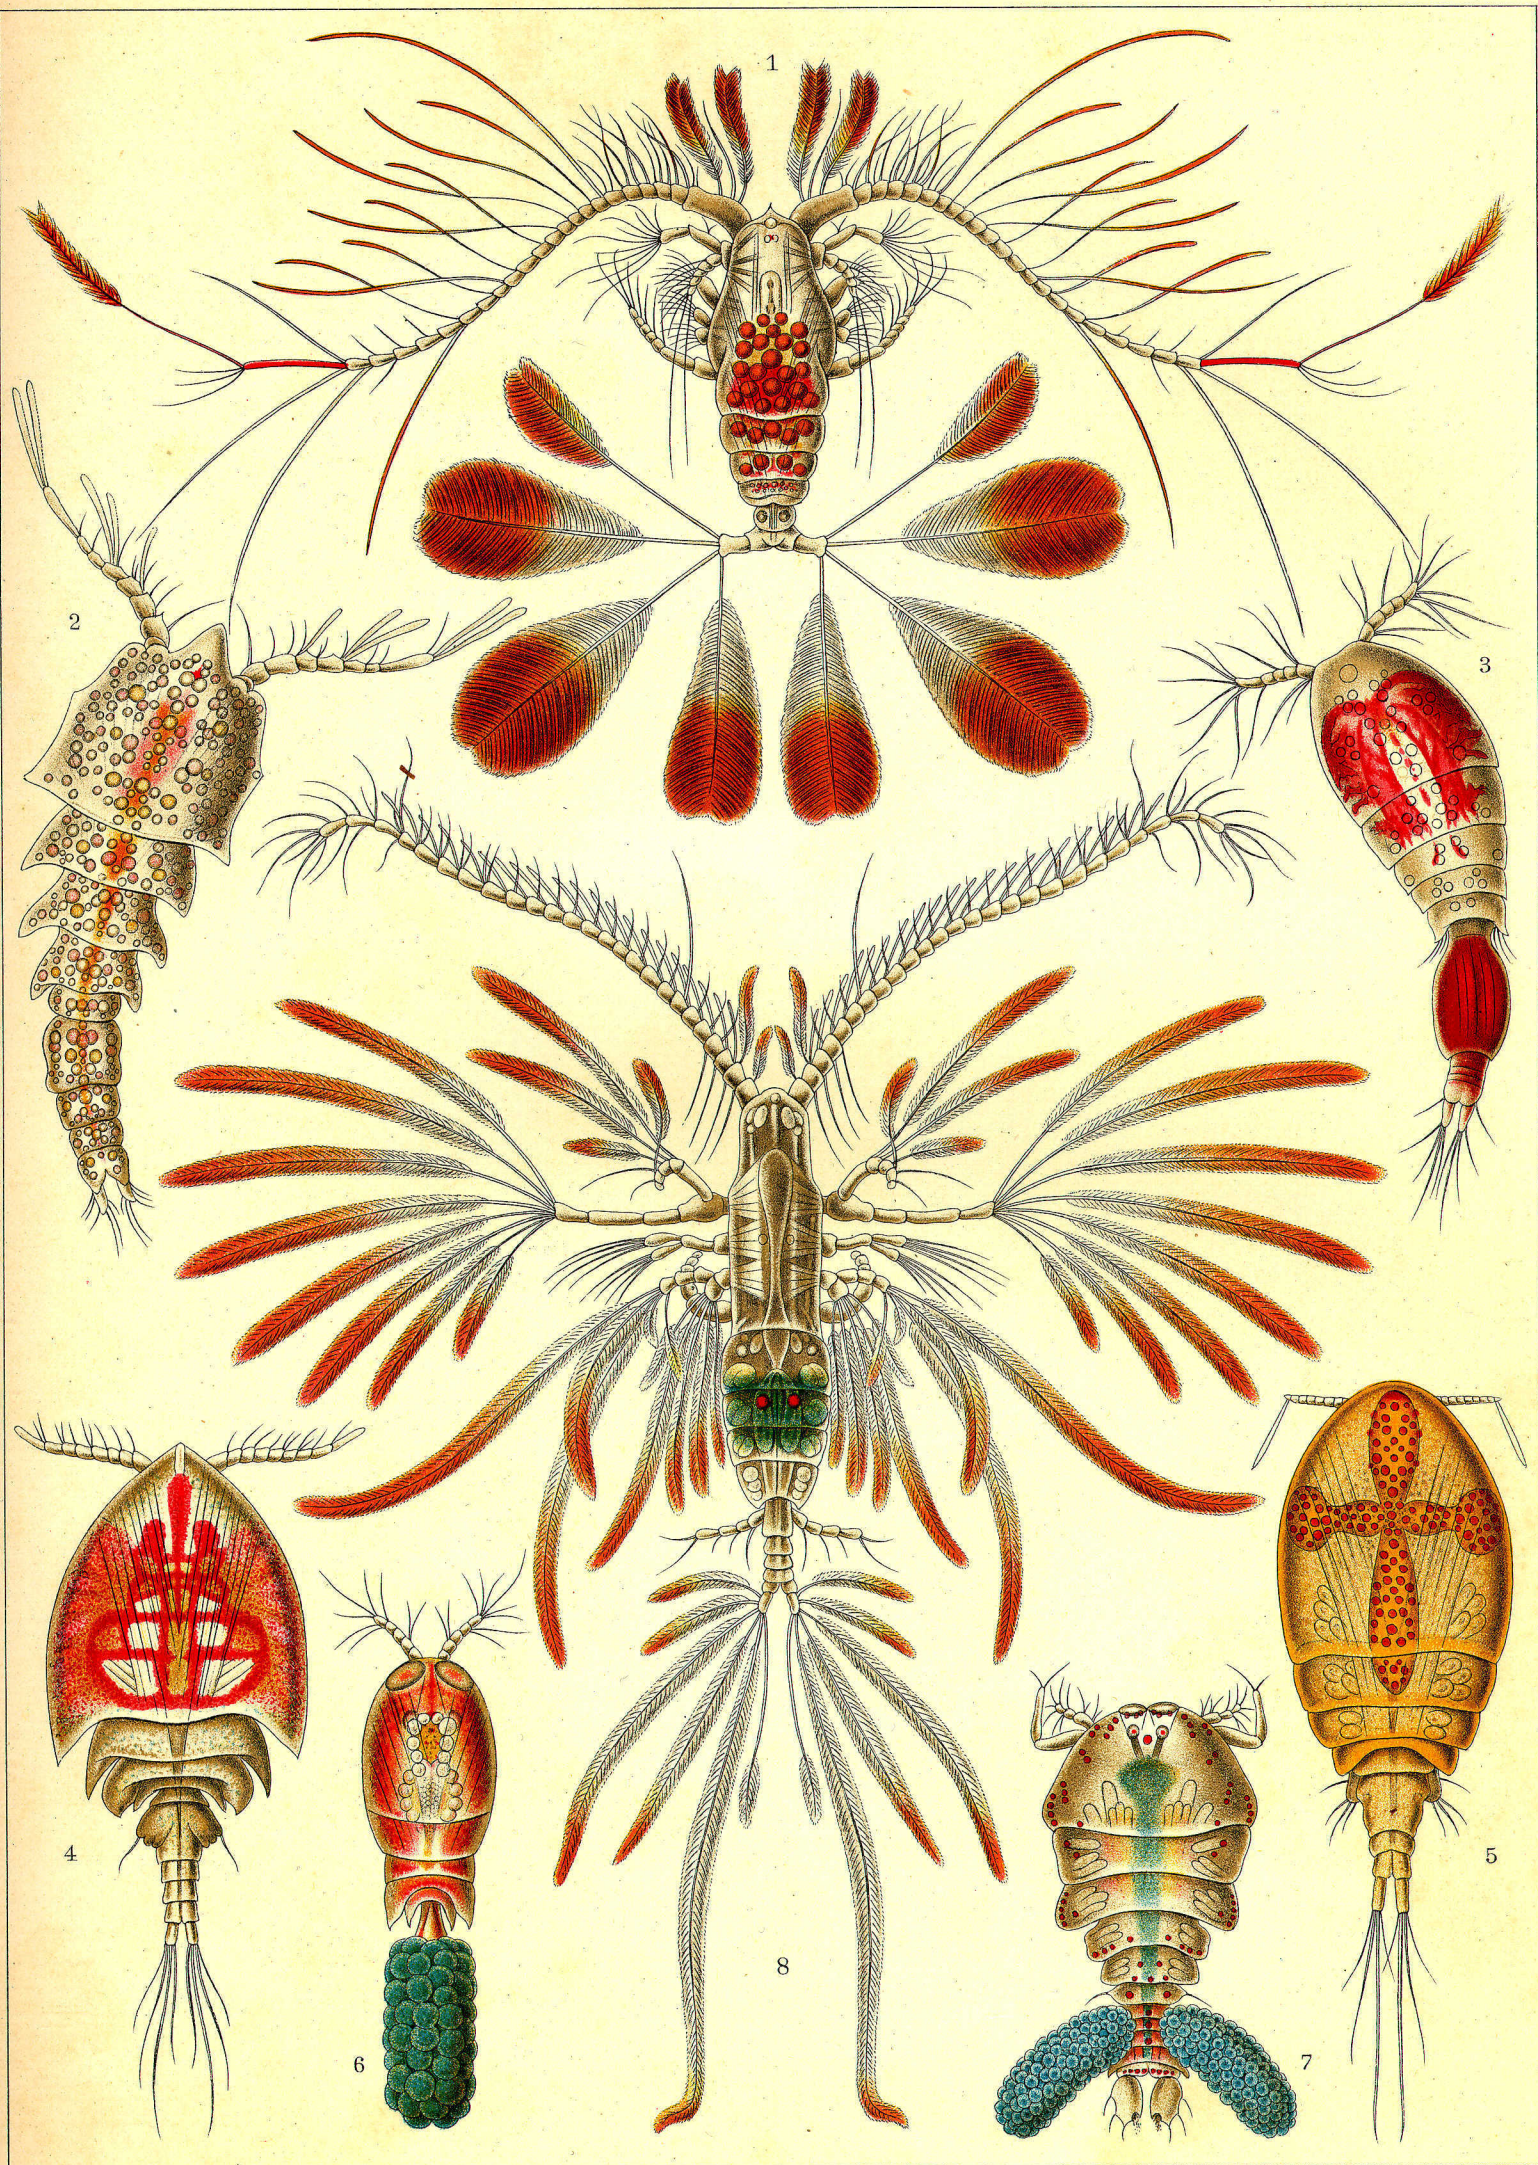

Prosobranchia. — Vorderkiemen-Schnecken.

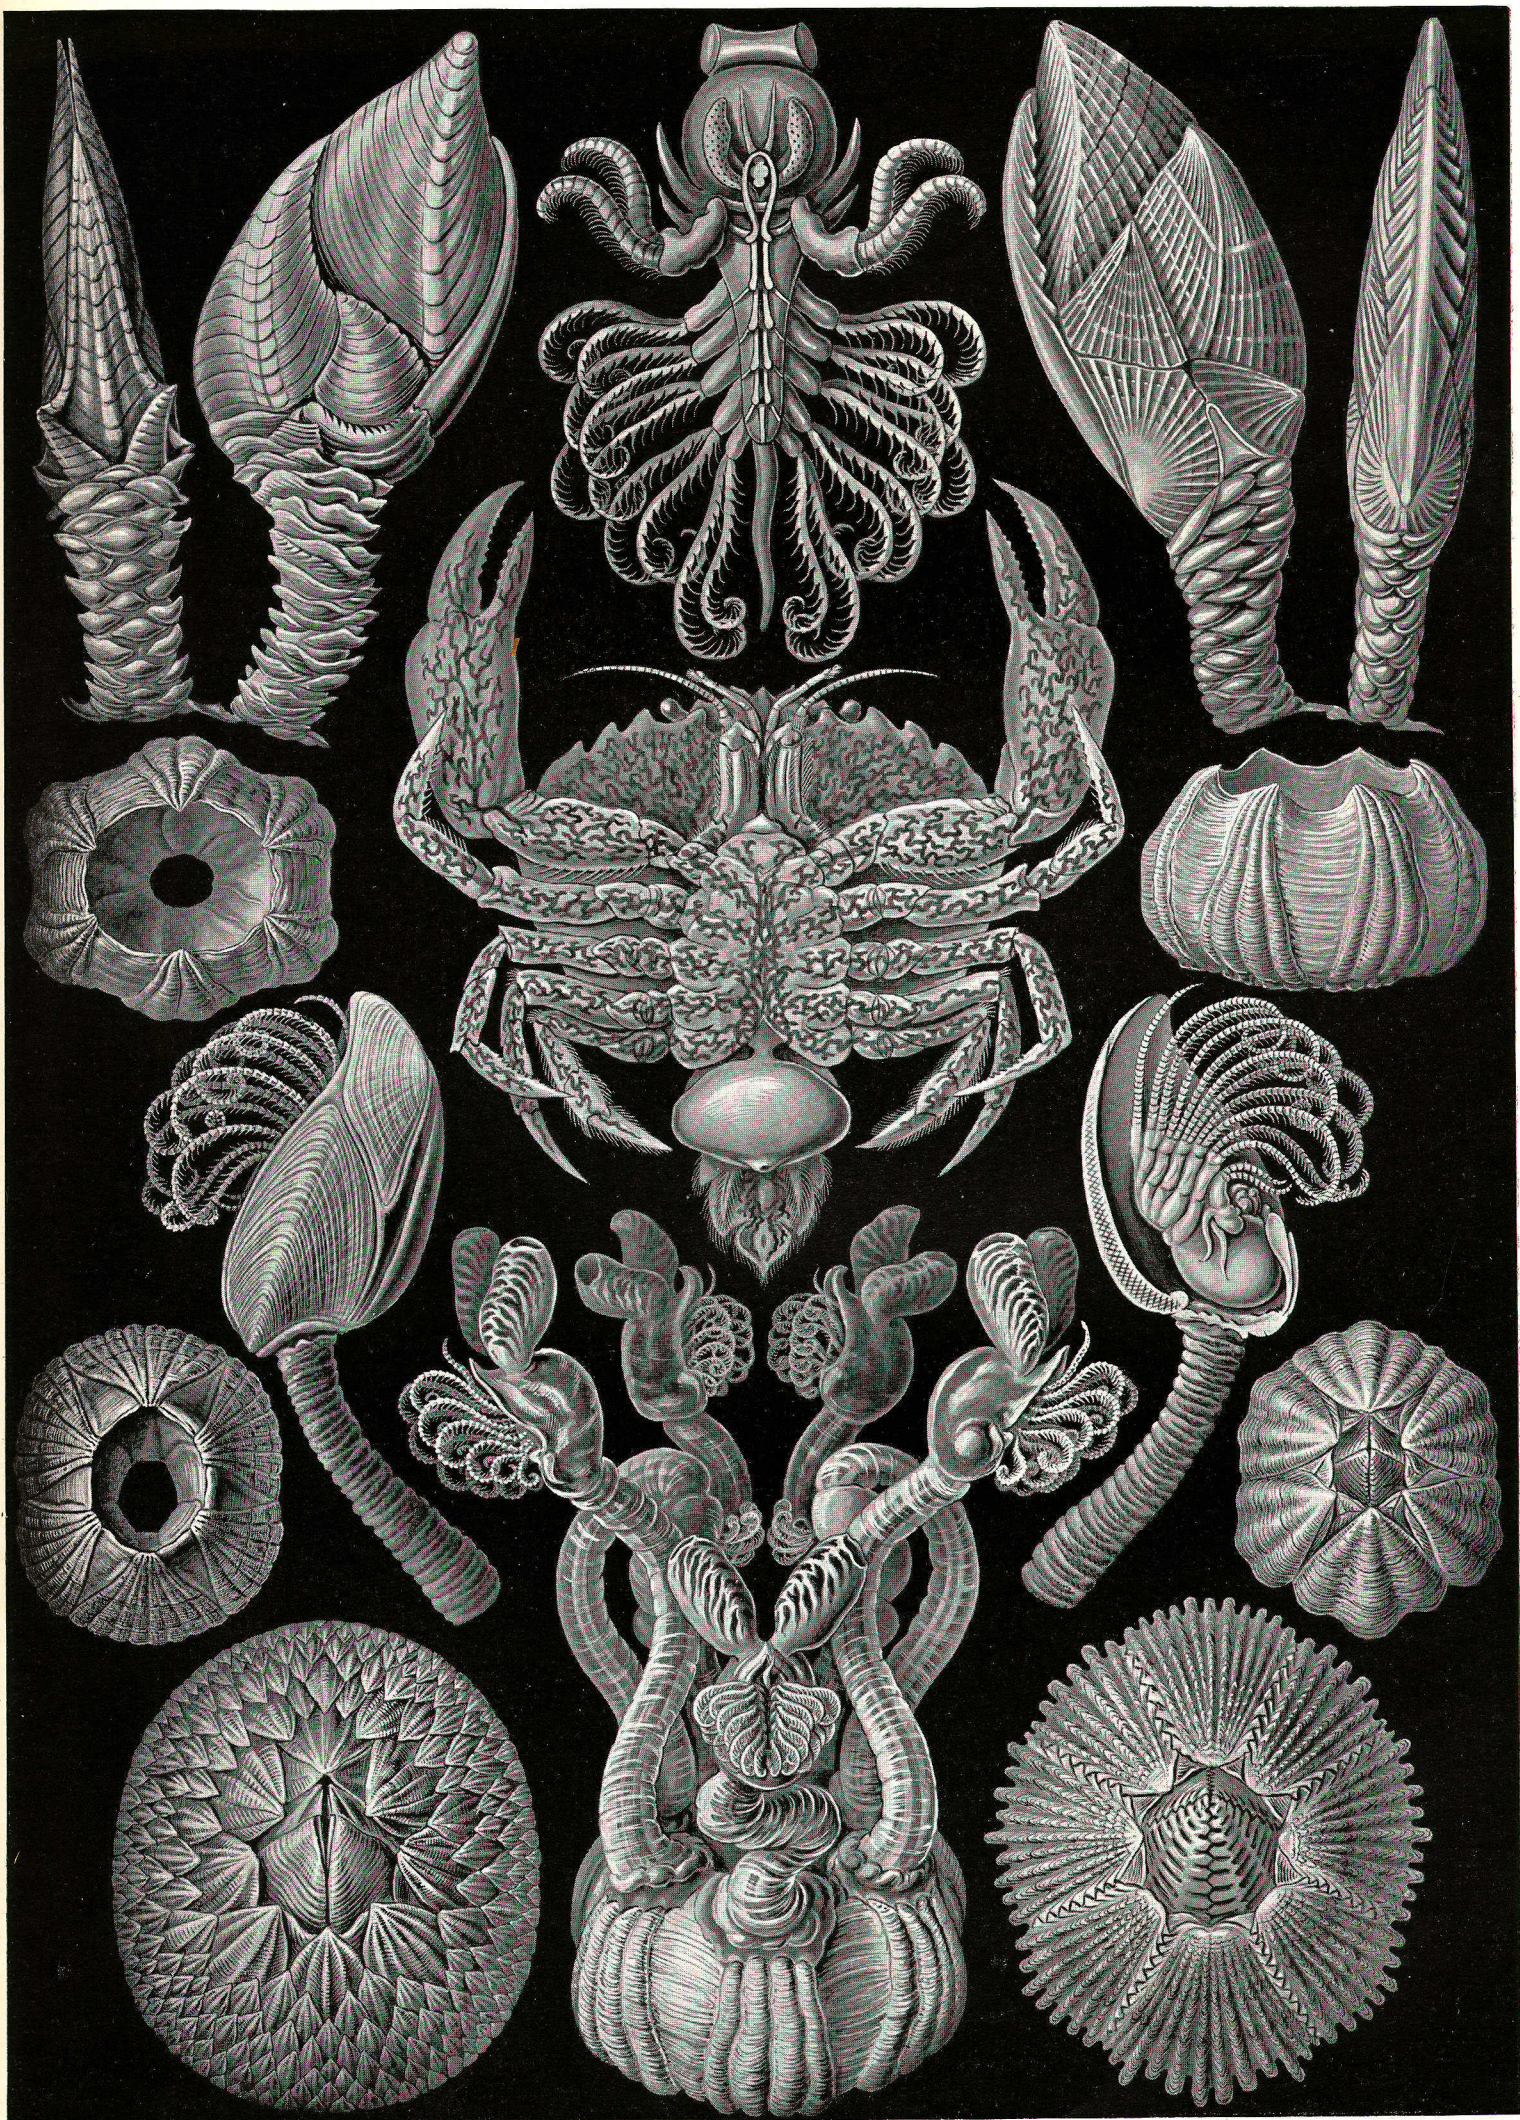

Gamochonia. — Trichterkraken.

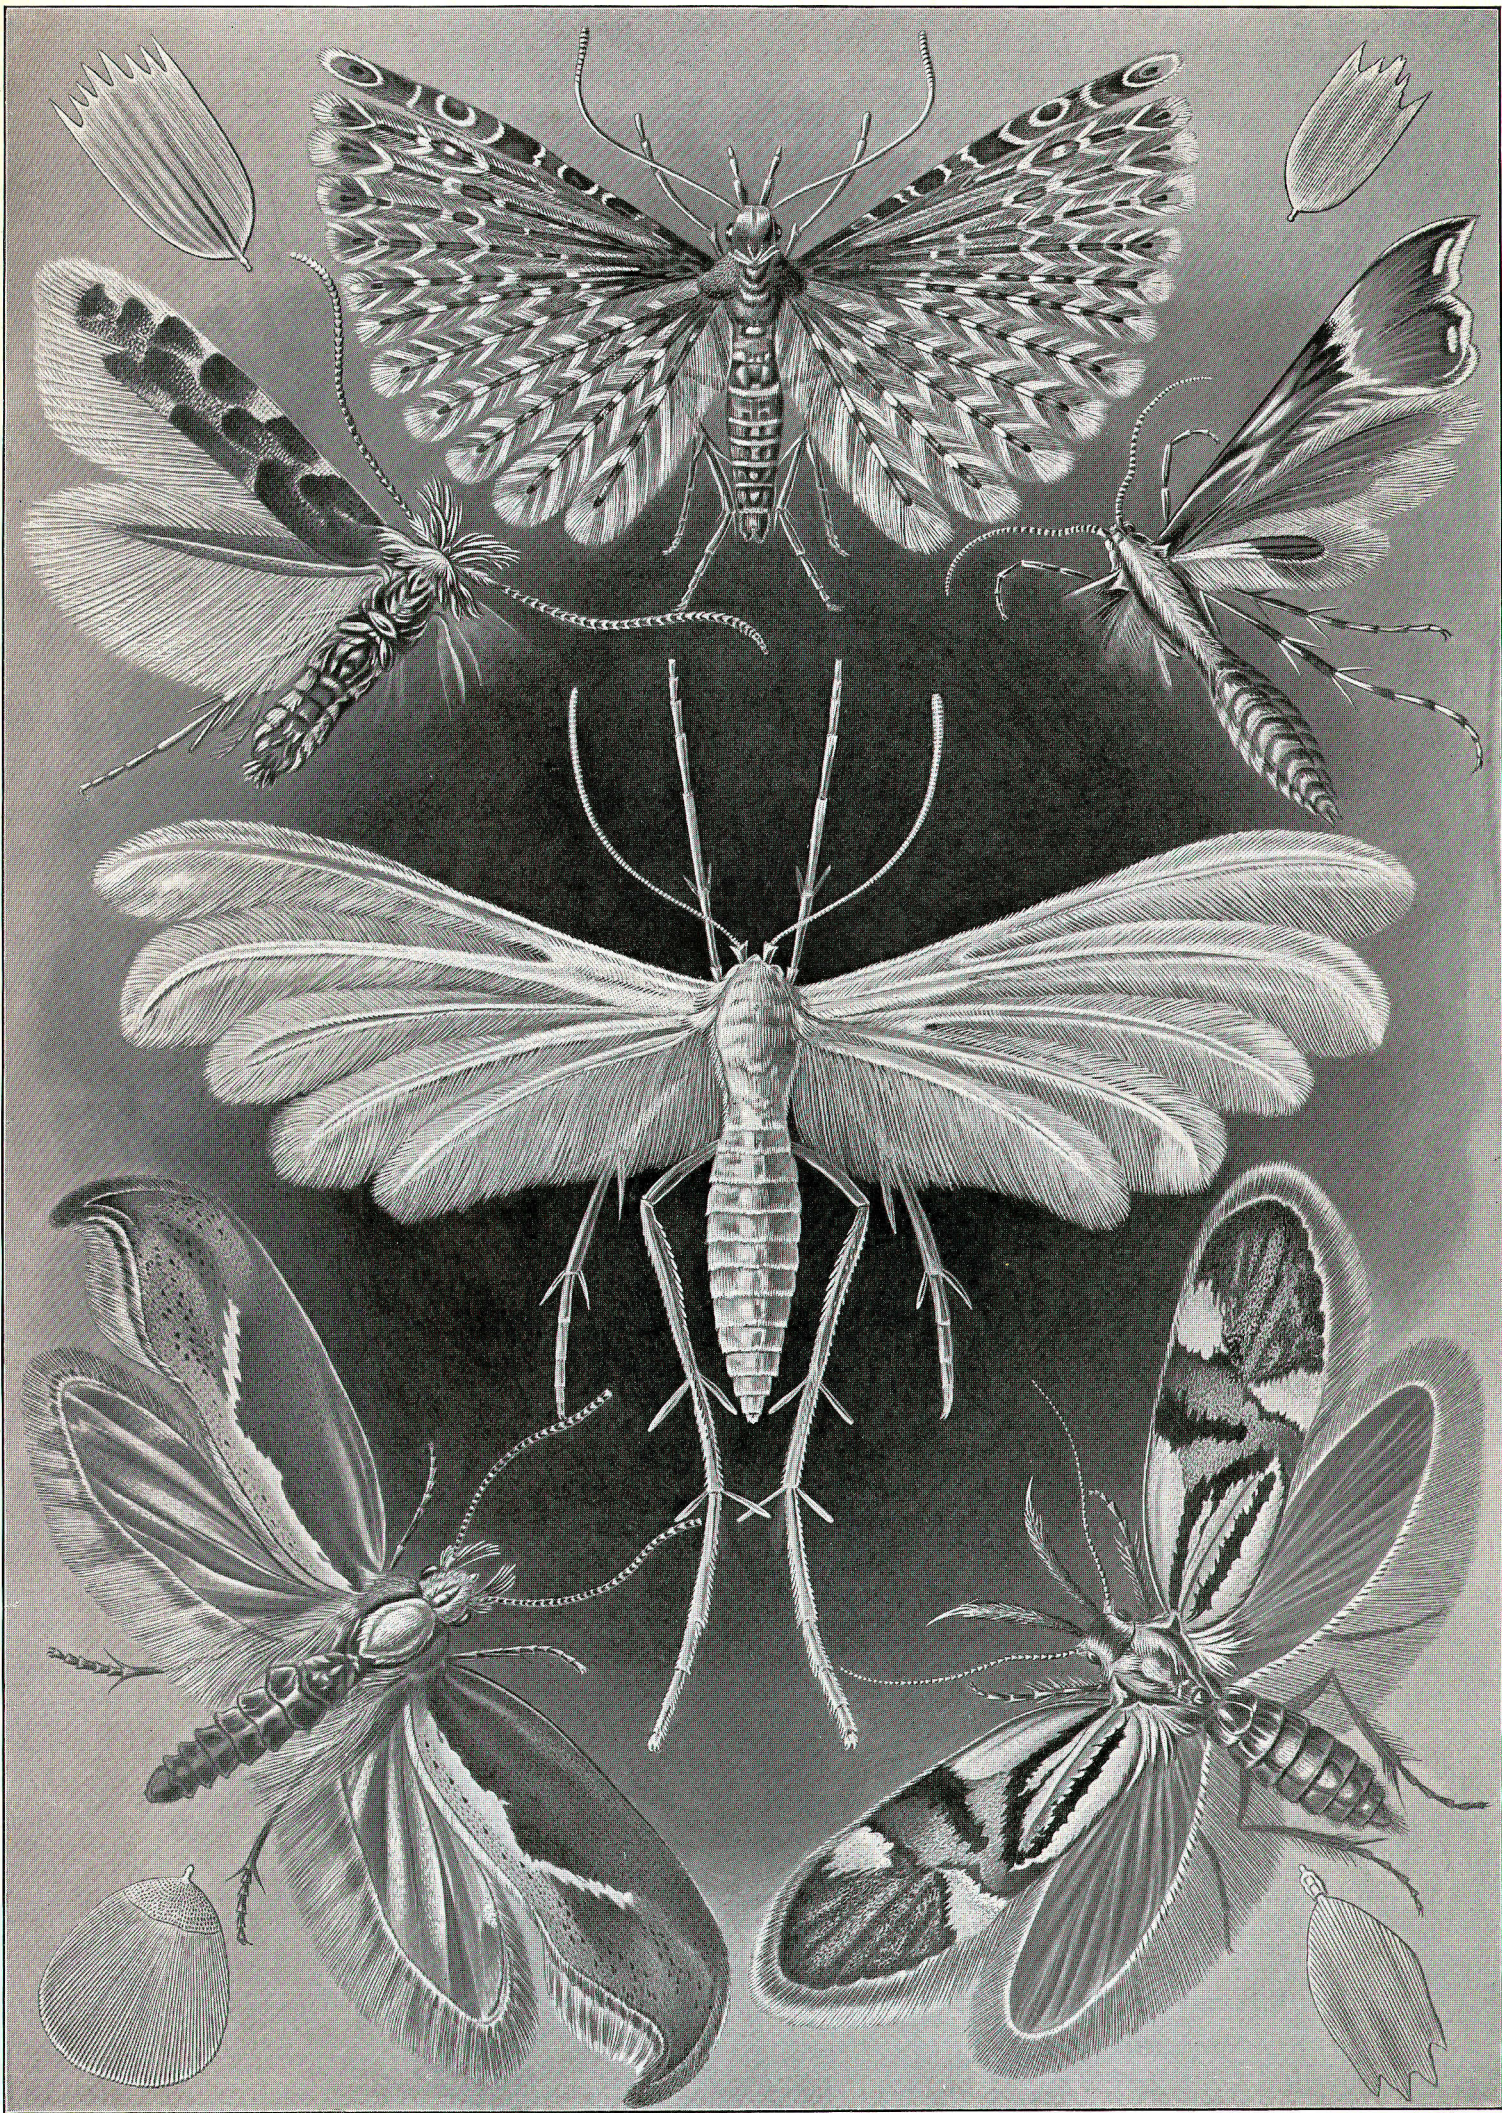

Acephala. — Muscheln.

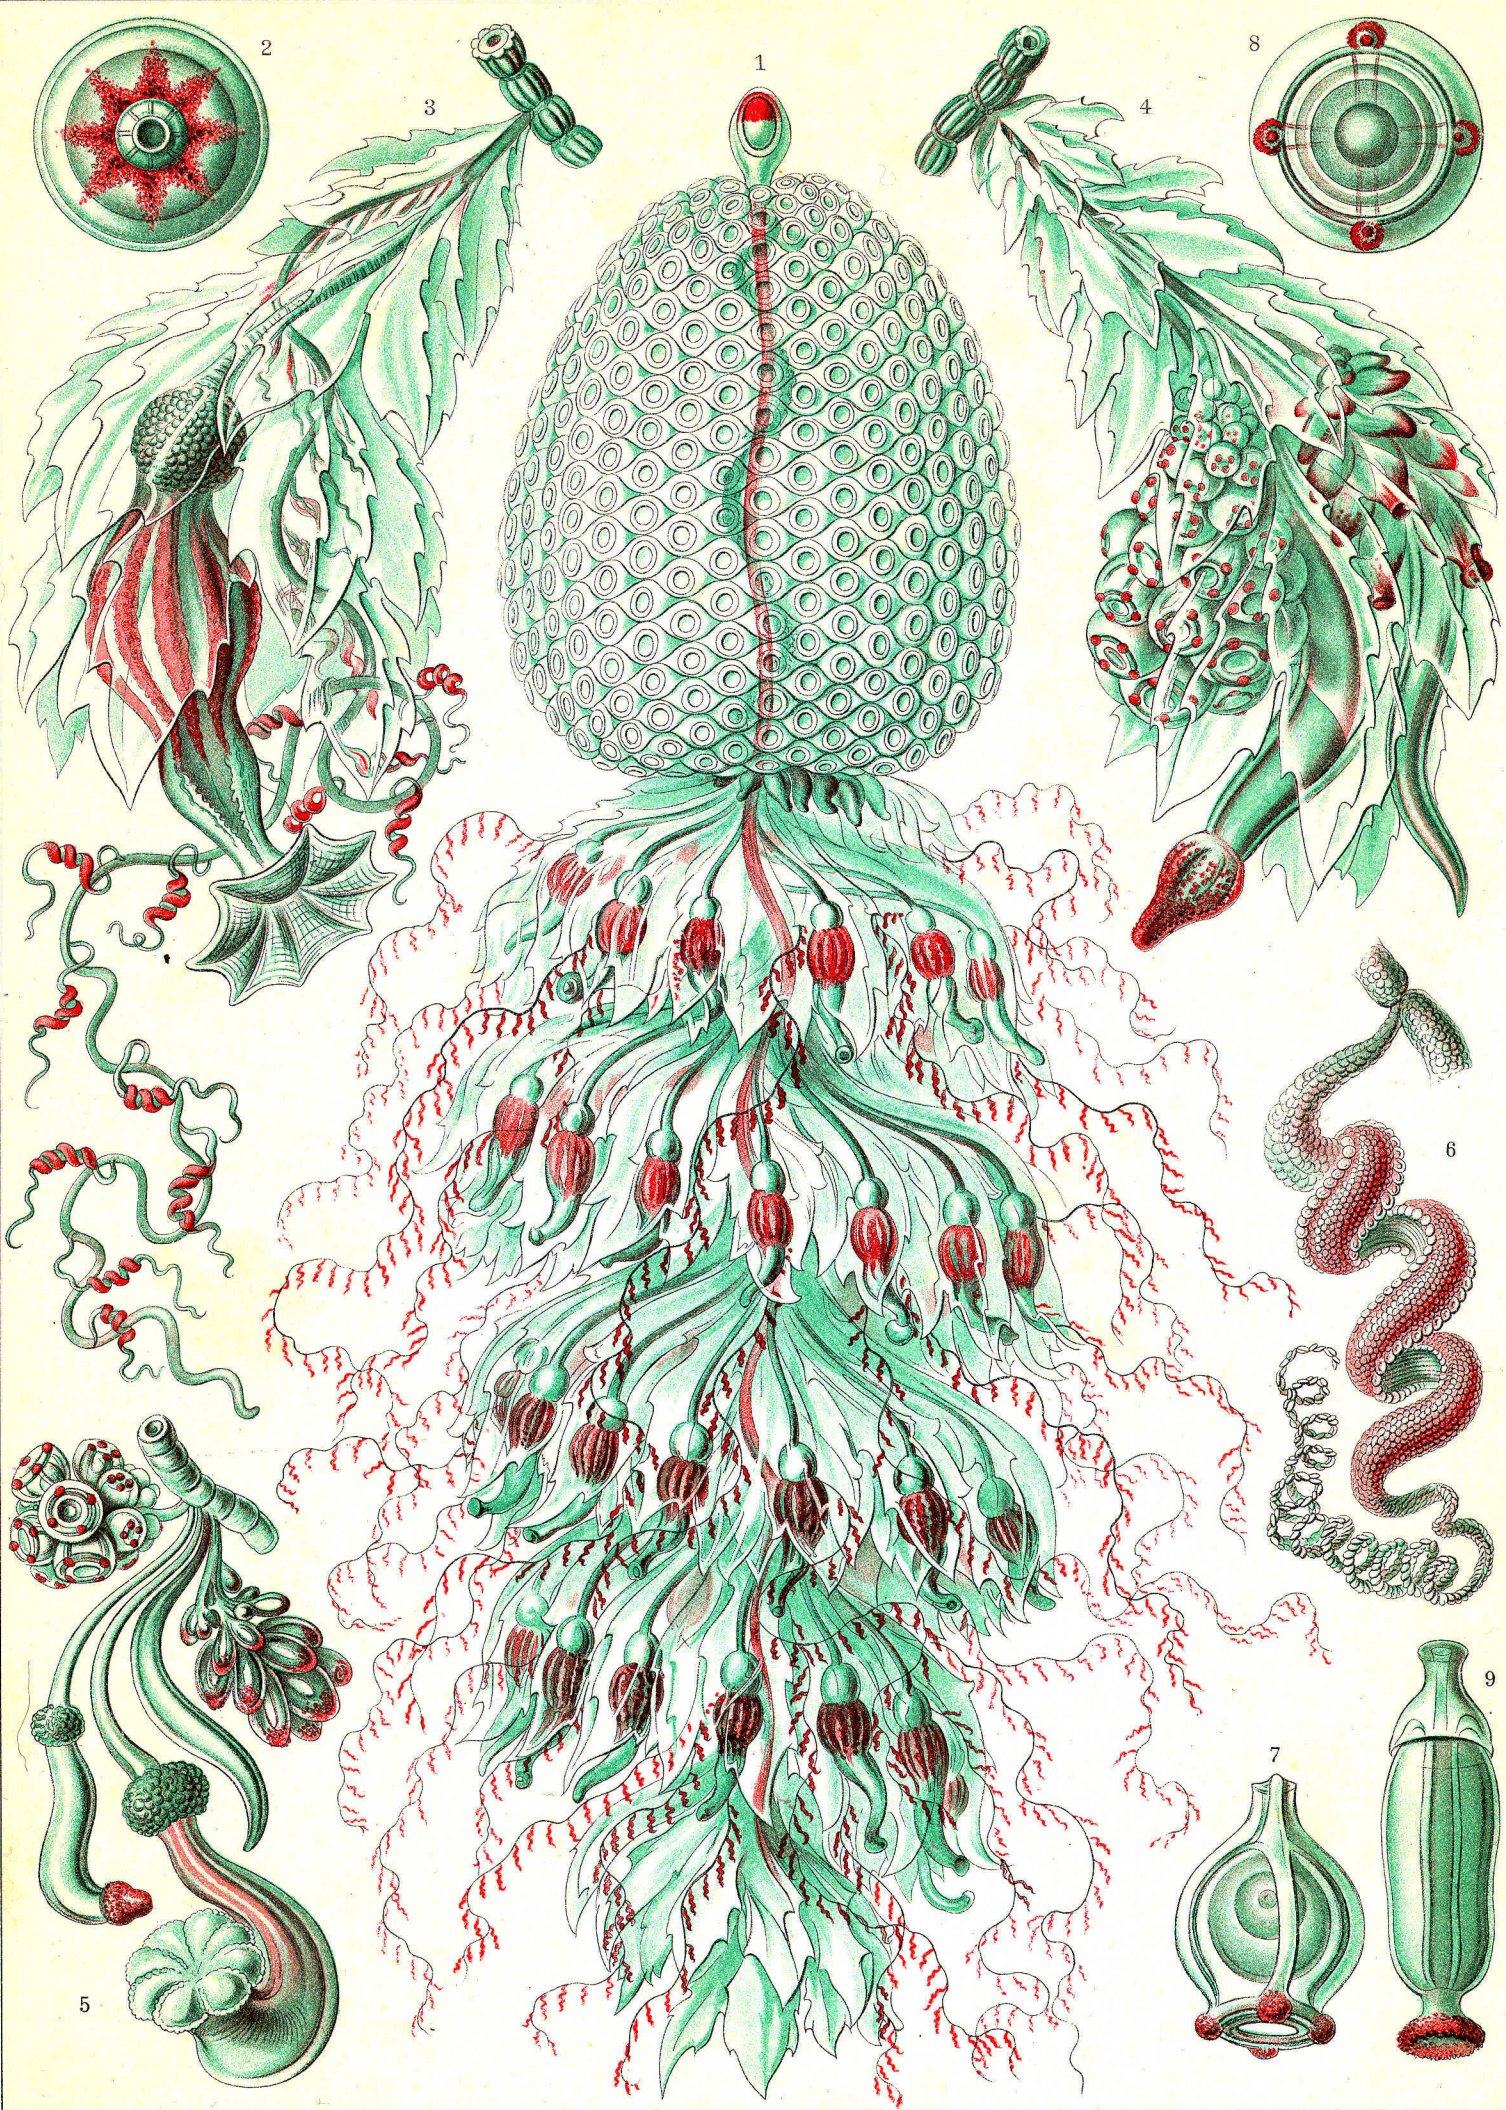

Copepoda. — Zuderkrabbe.

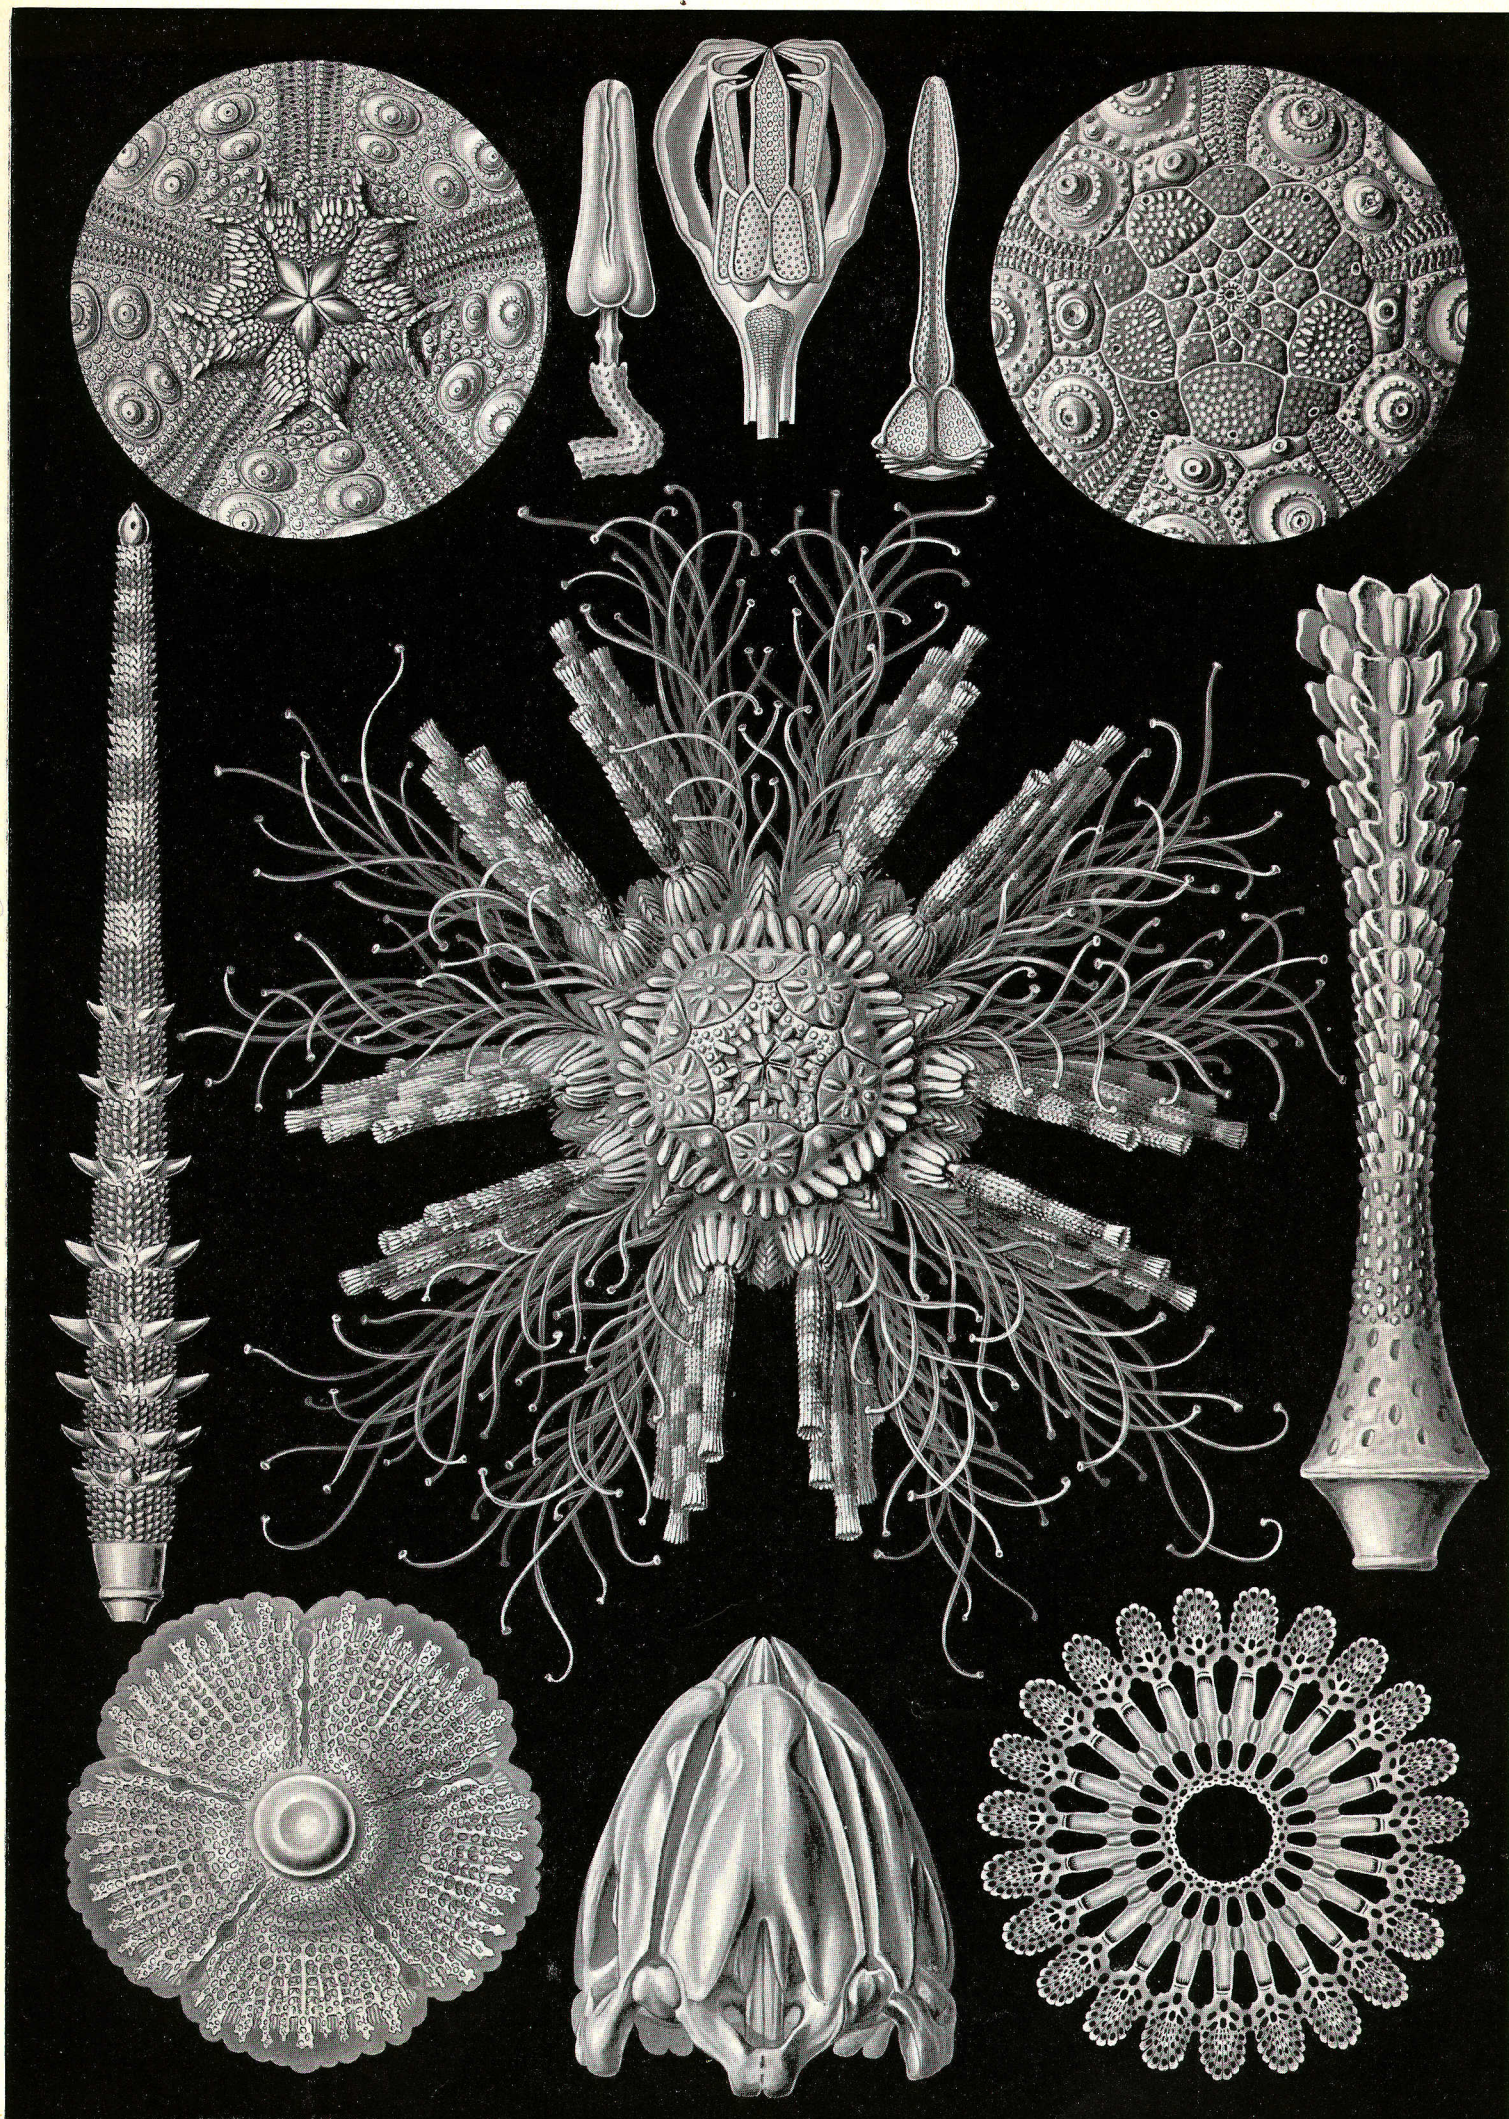

Cirripedia. — Rankenkrebse.

Tineida. — Motten.

Siphonophorae. — Staatsquassen.

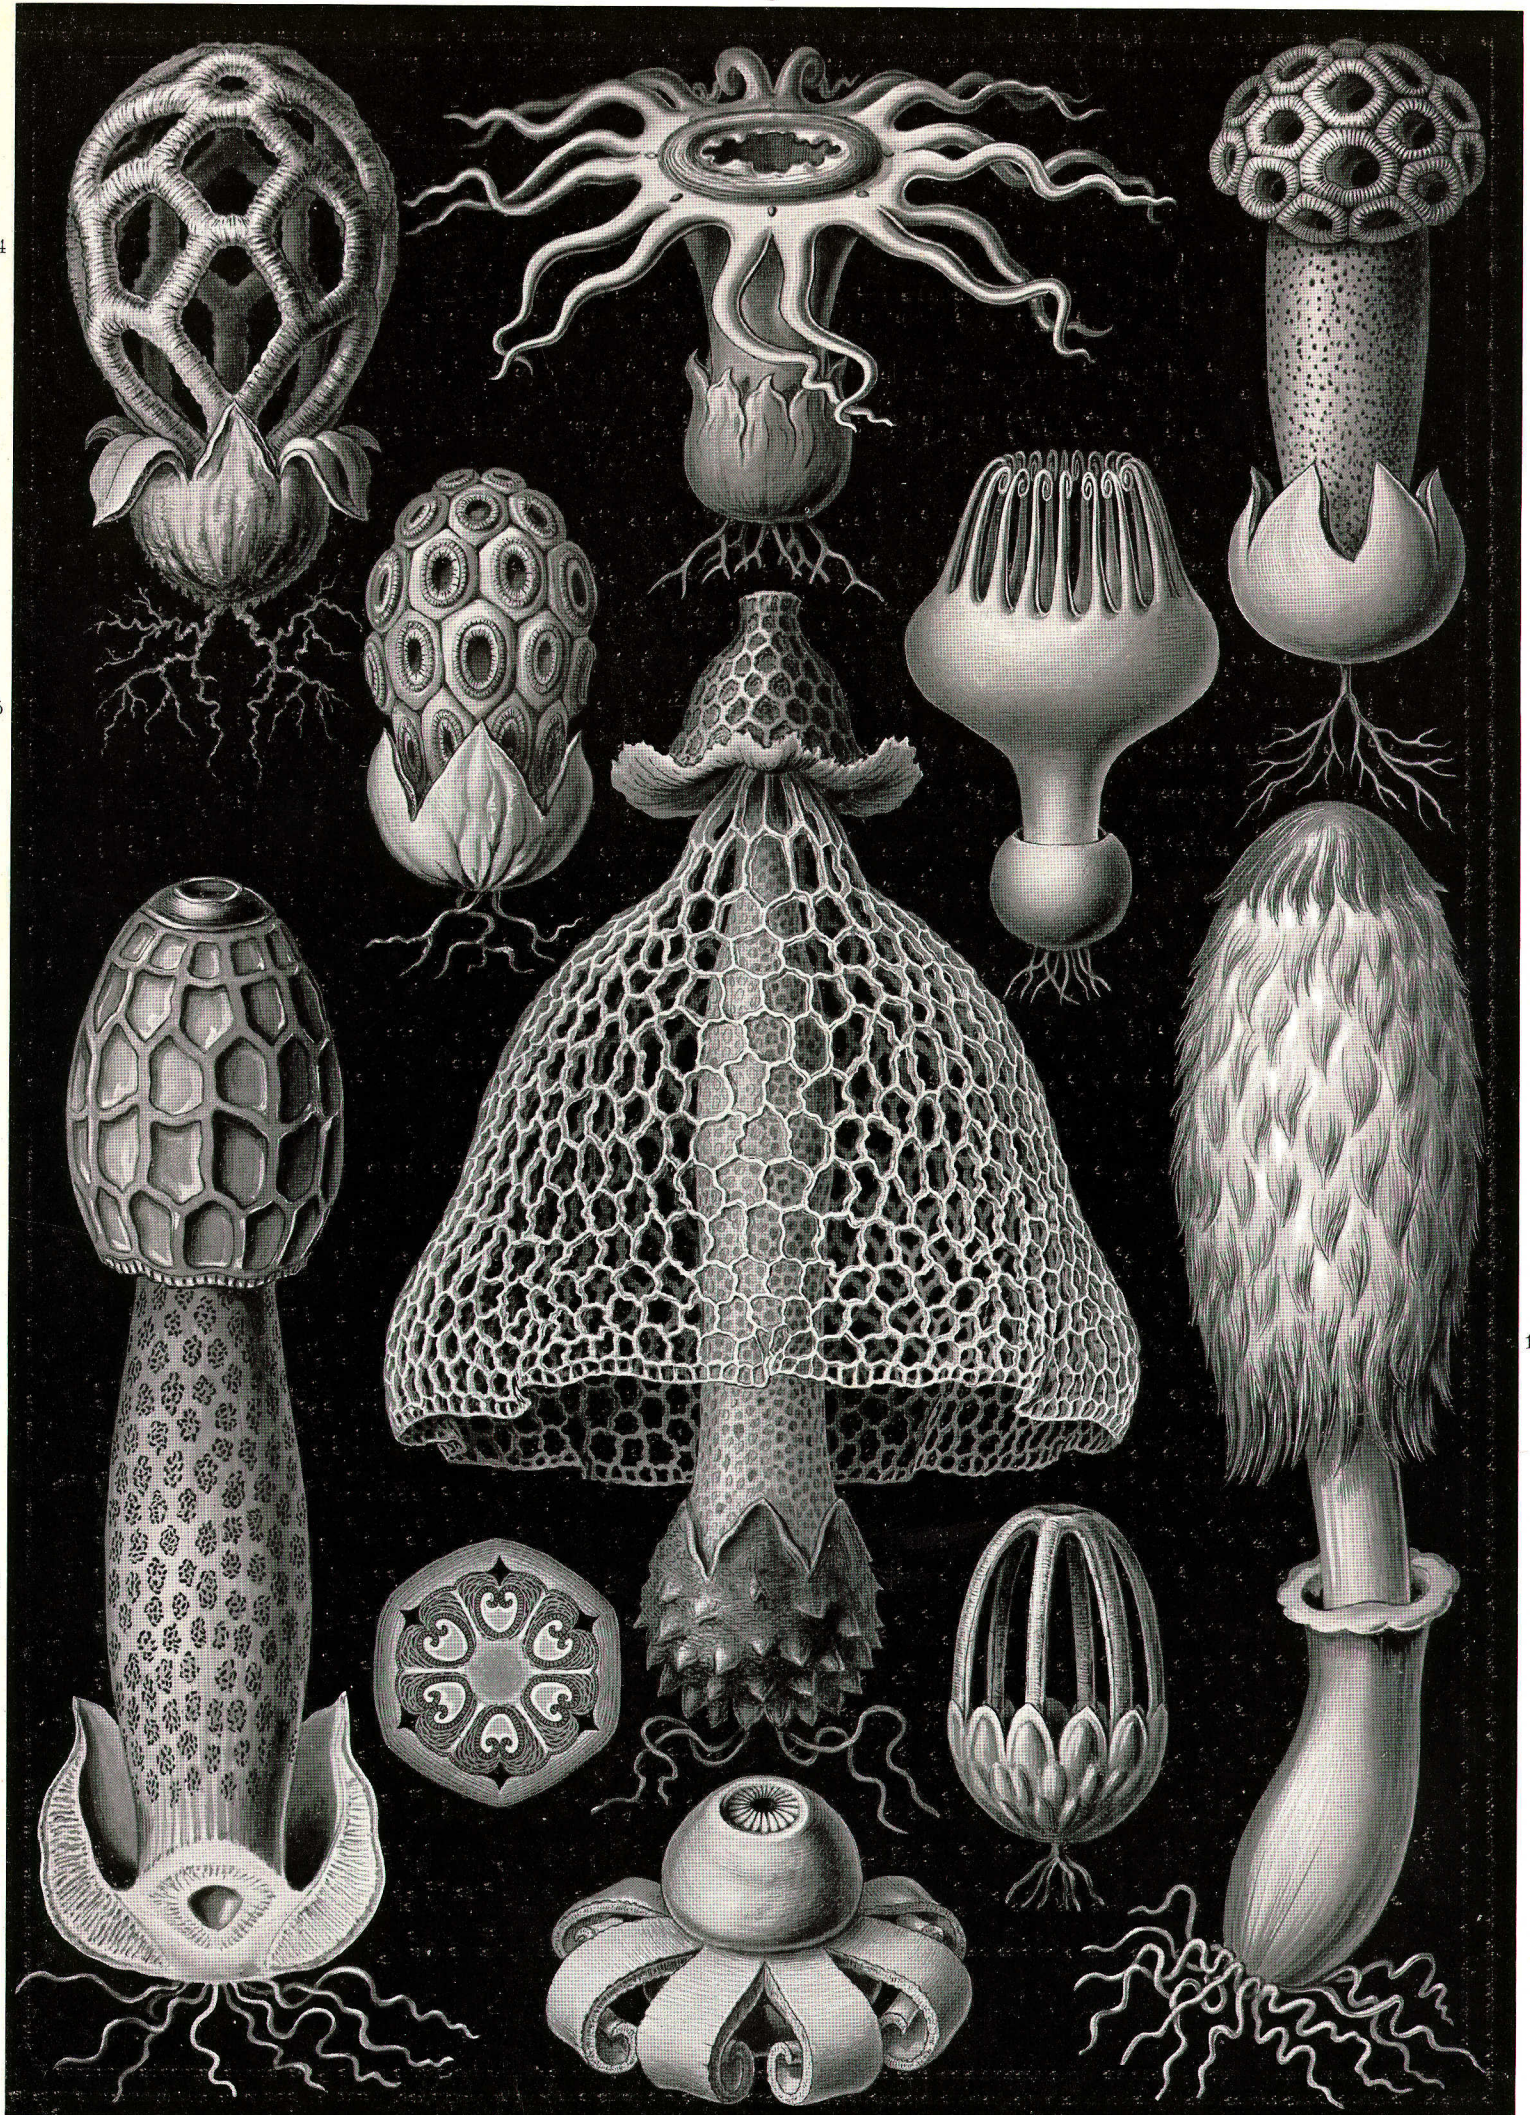

Echinidea. — Igelfterne.

Phaeodaria. — Rohrstrahlringe.

Nepenthaceae. — Farnpflanzen.

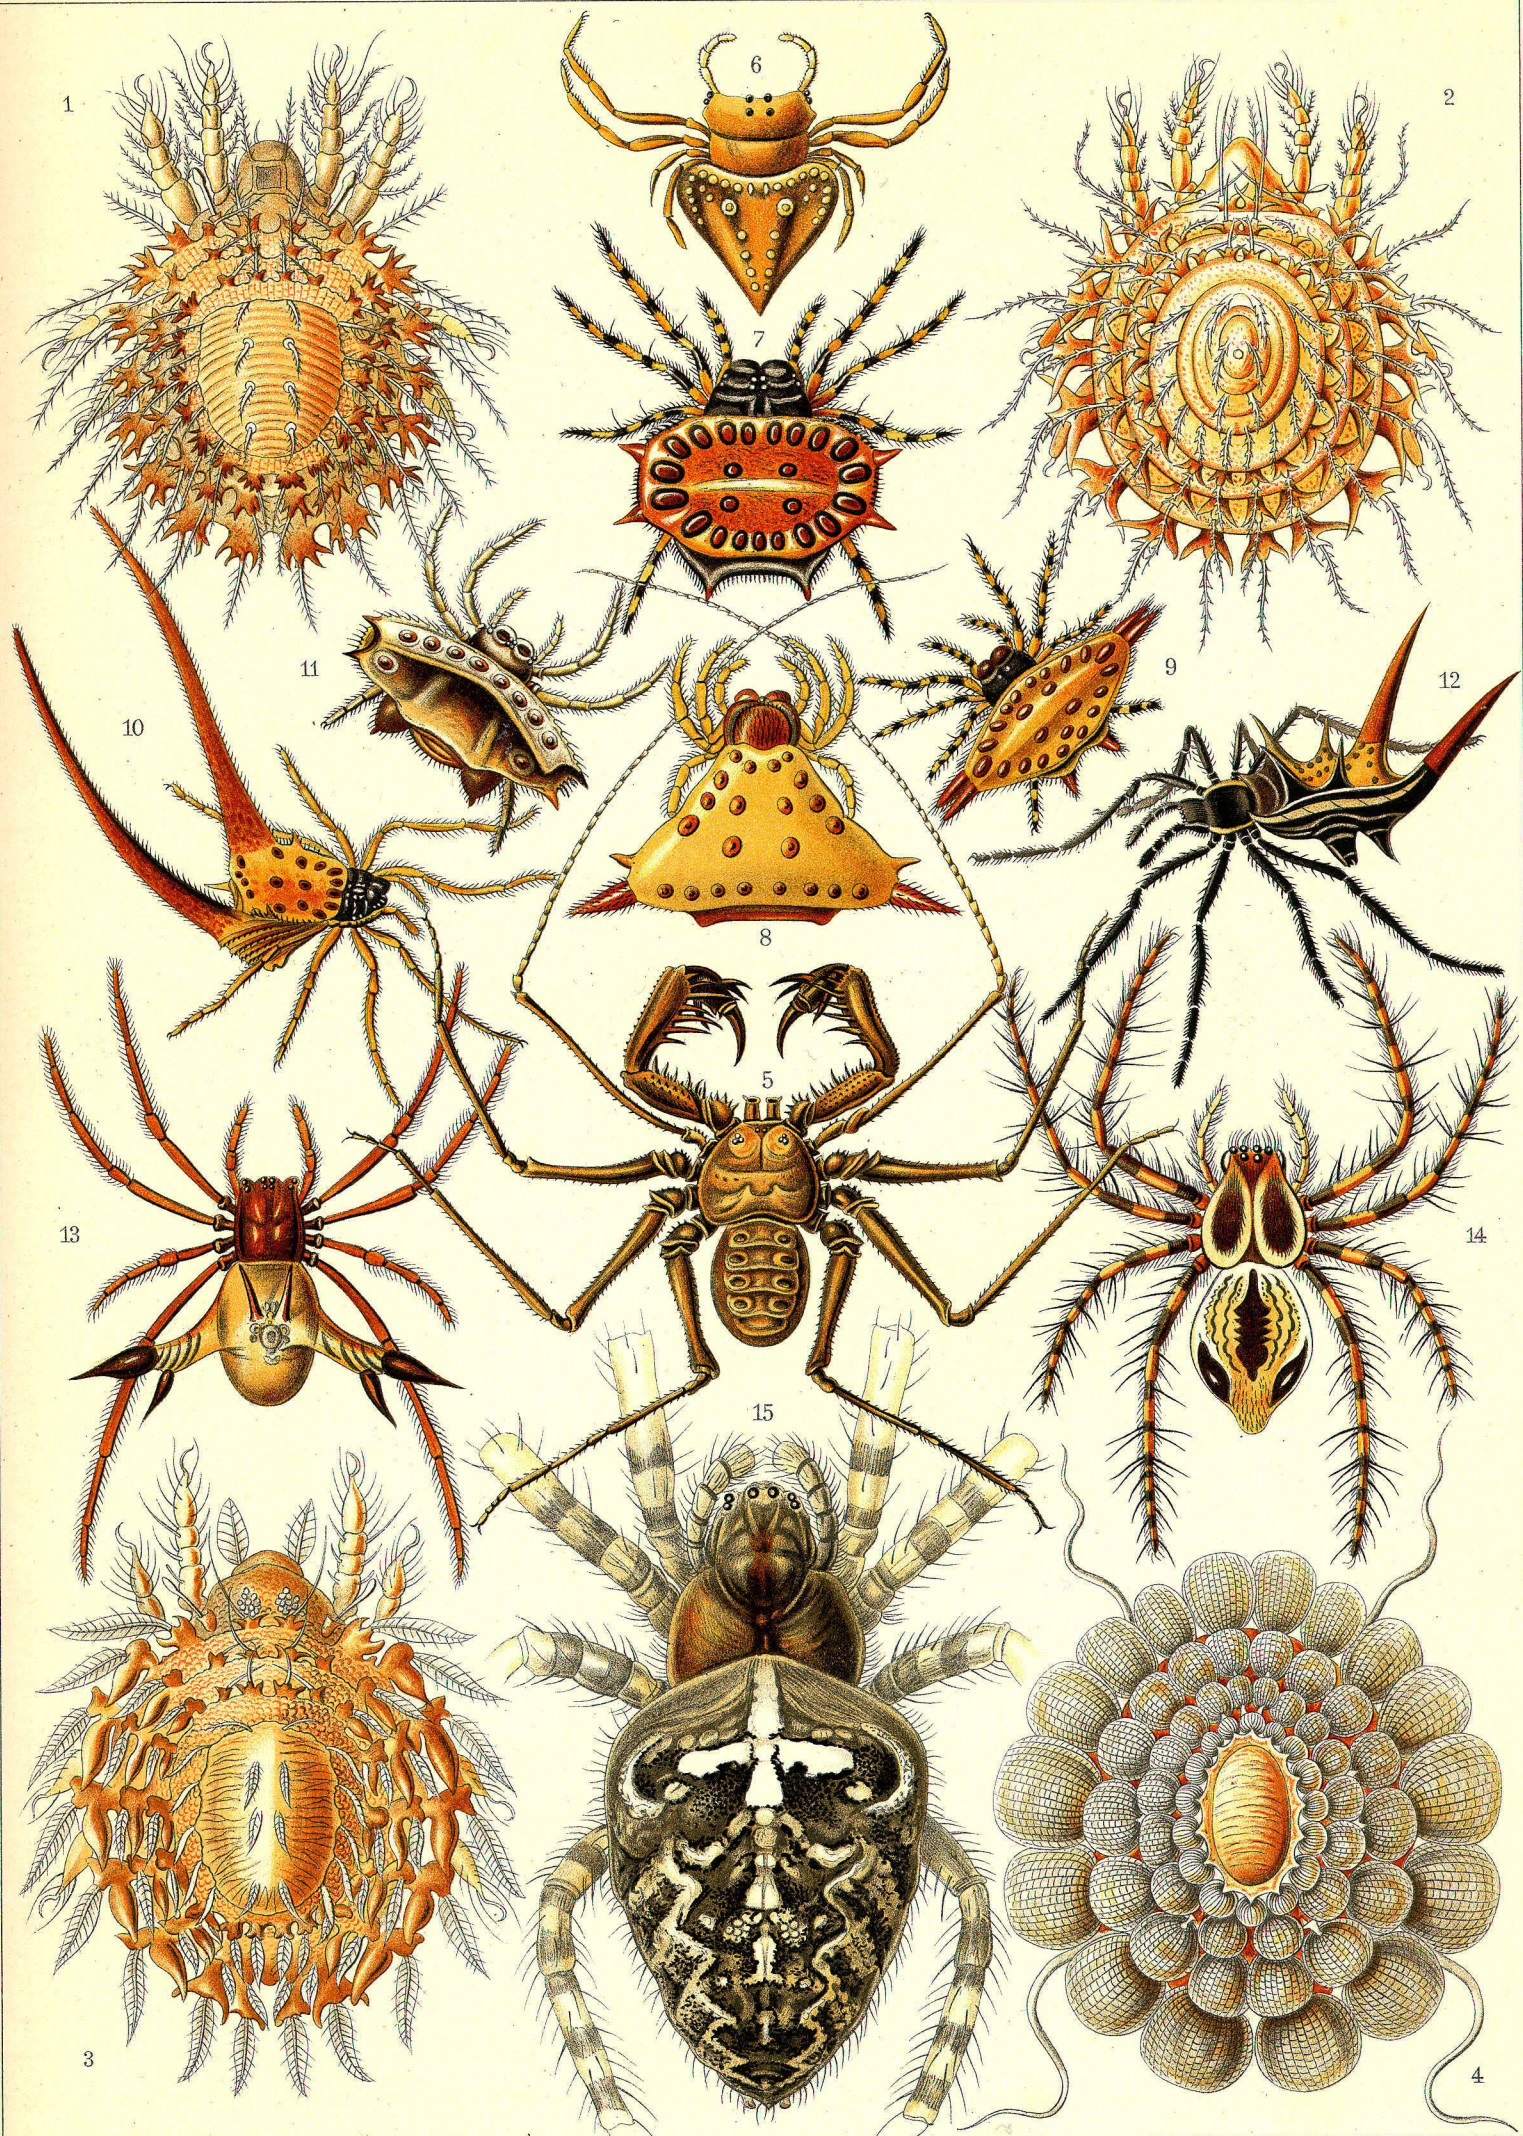

Basimycetes. — Schwammpilze.

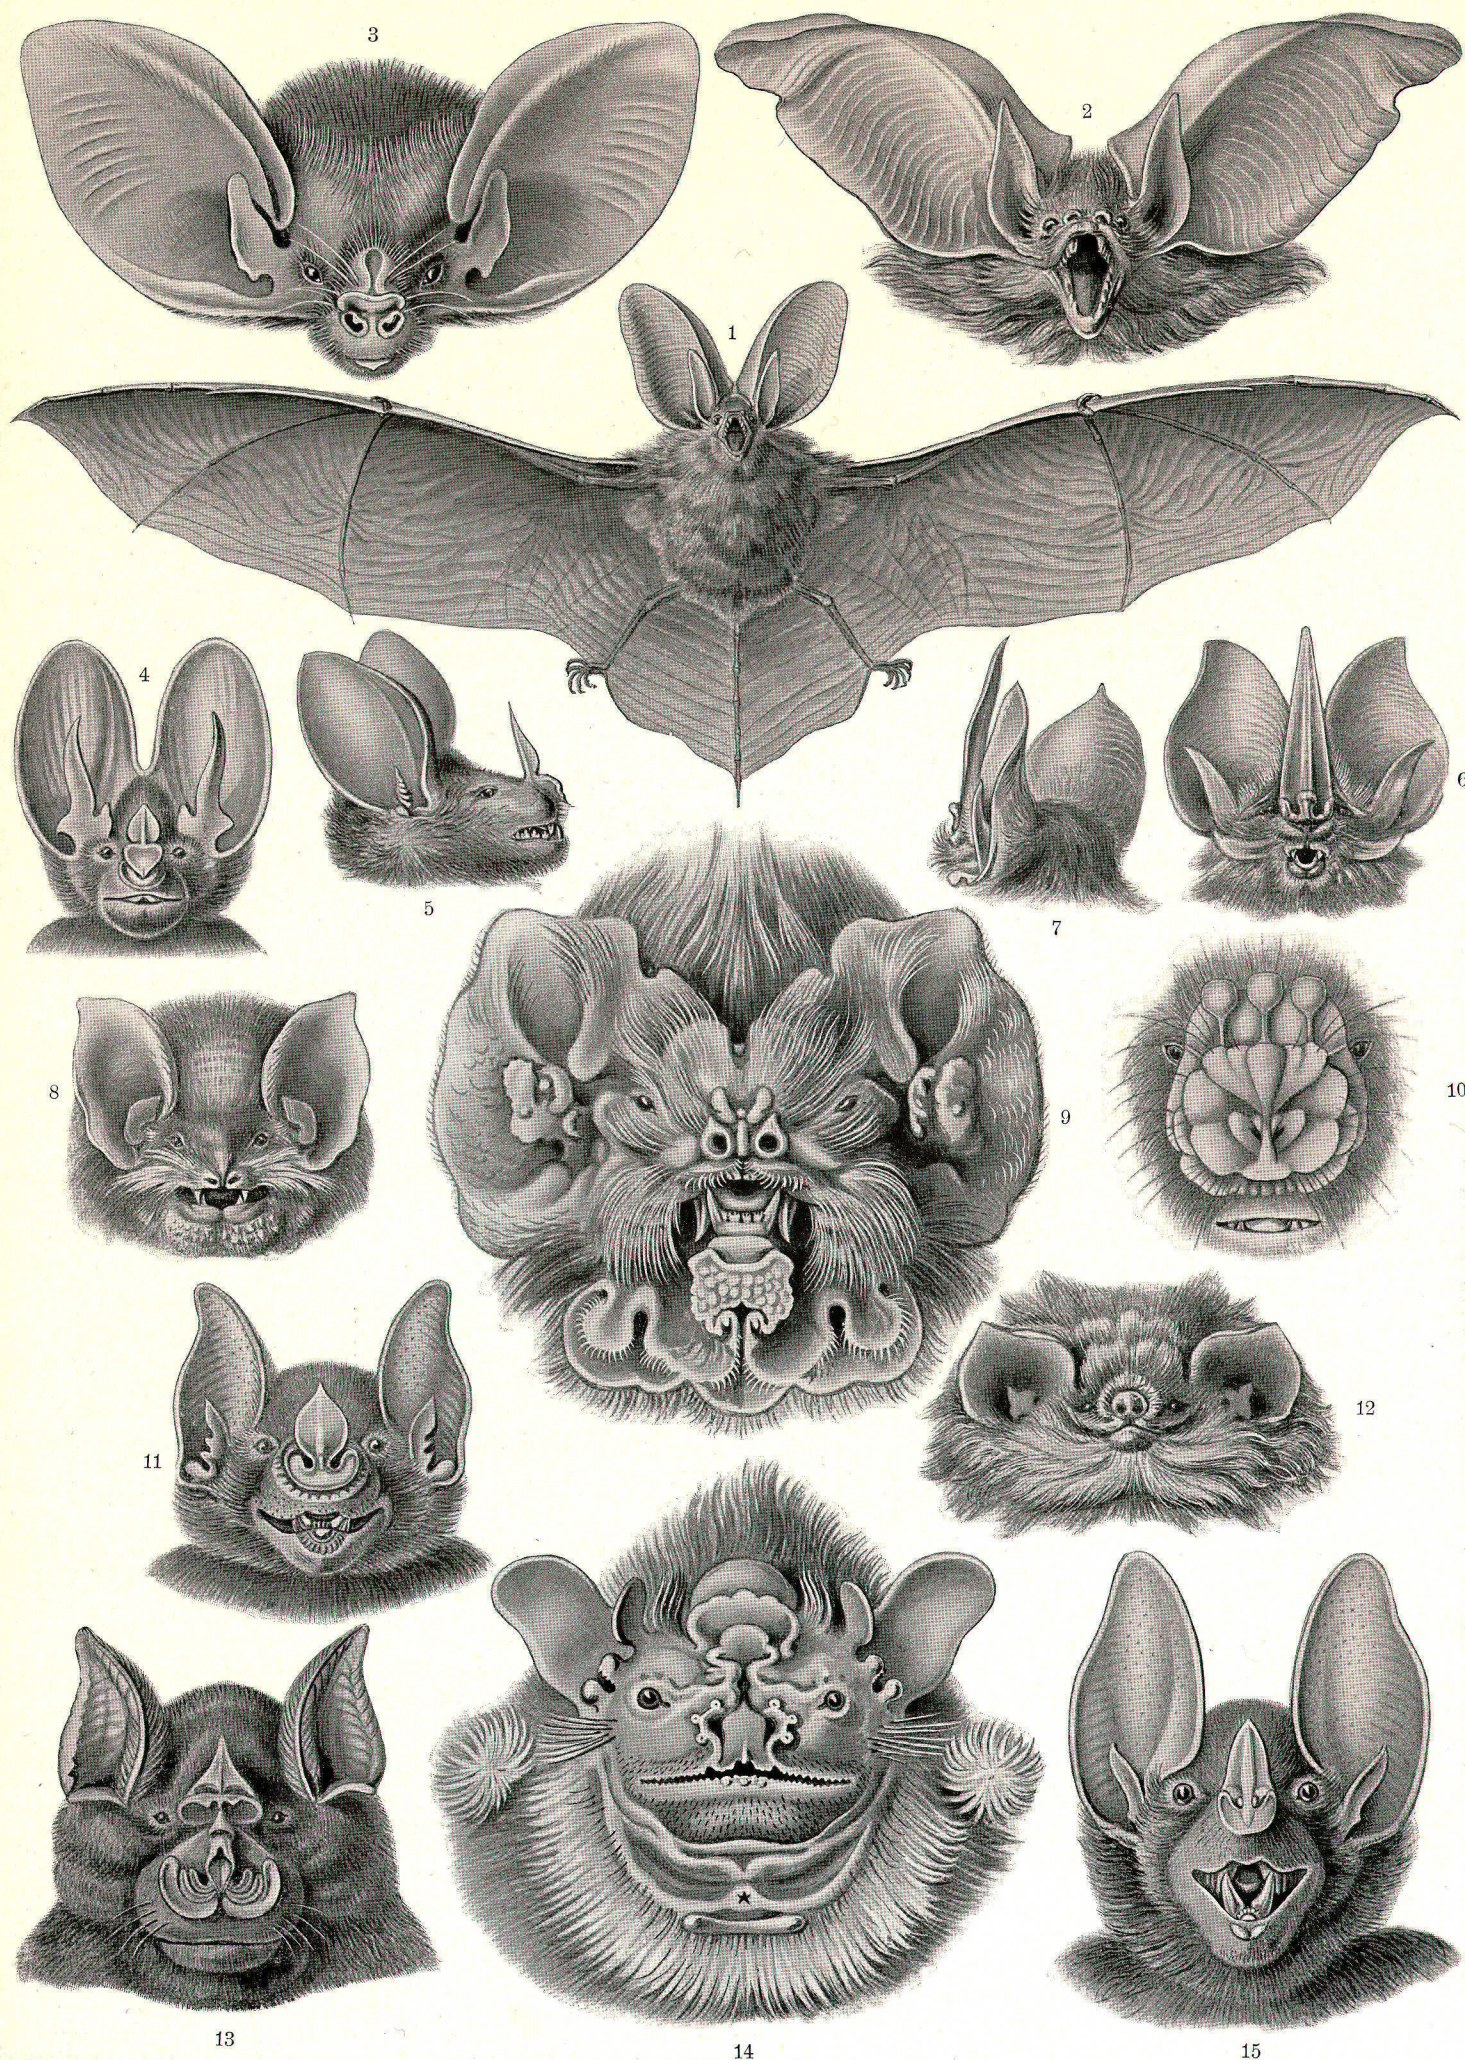

Siphoneae. — Riesen-Algeten.

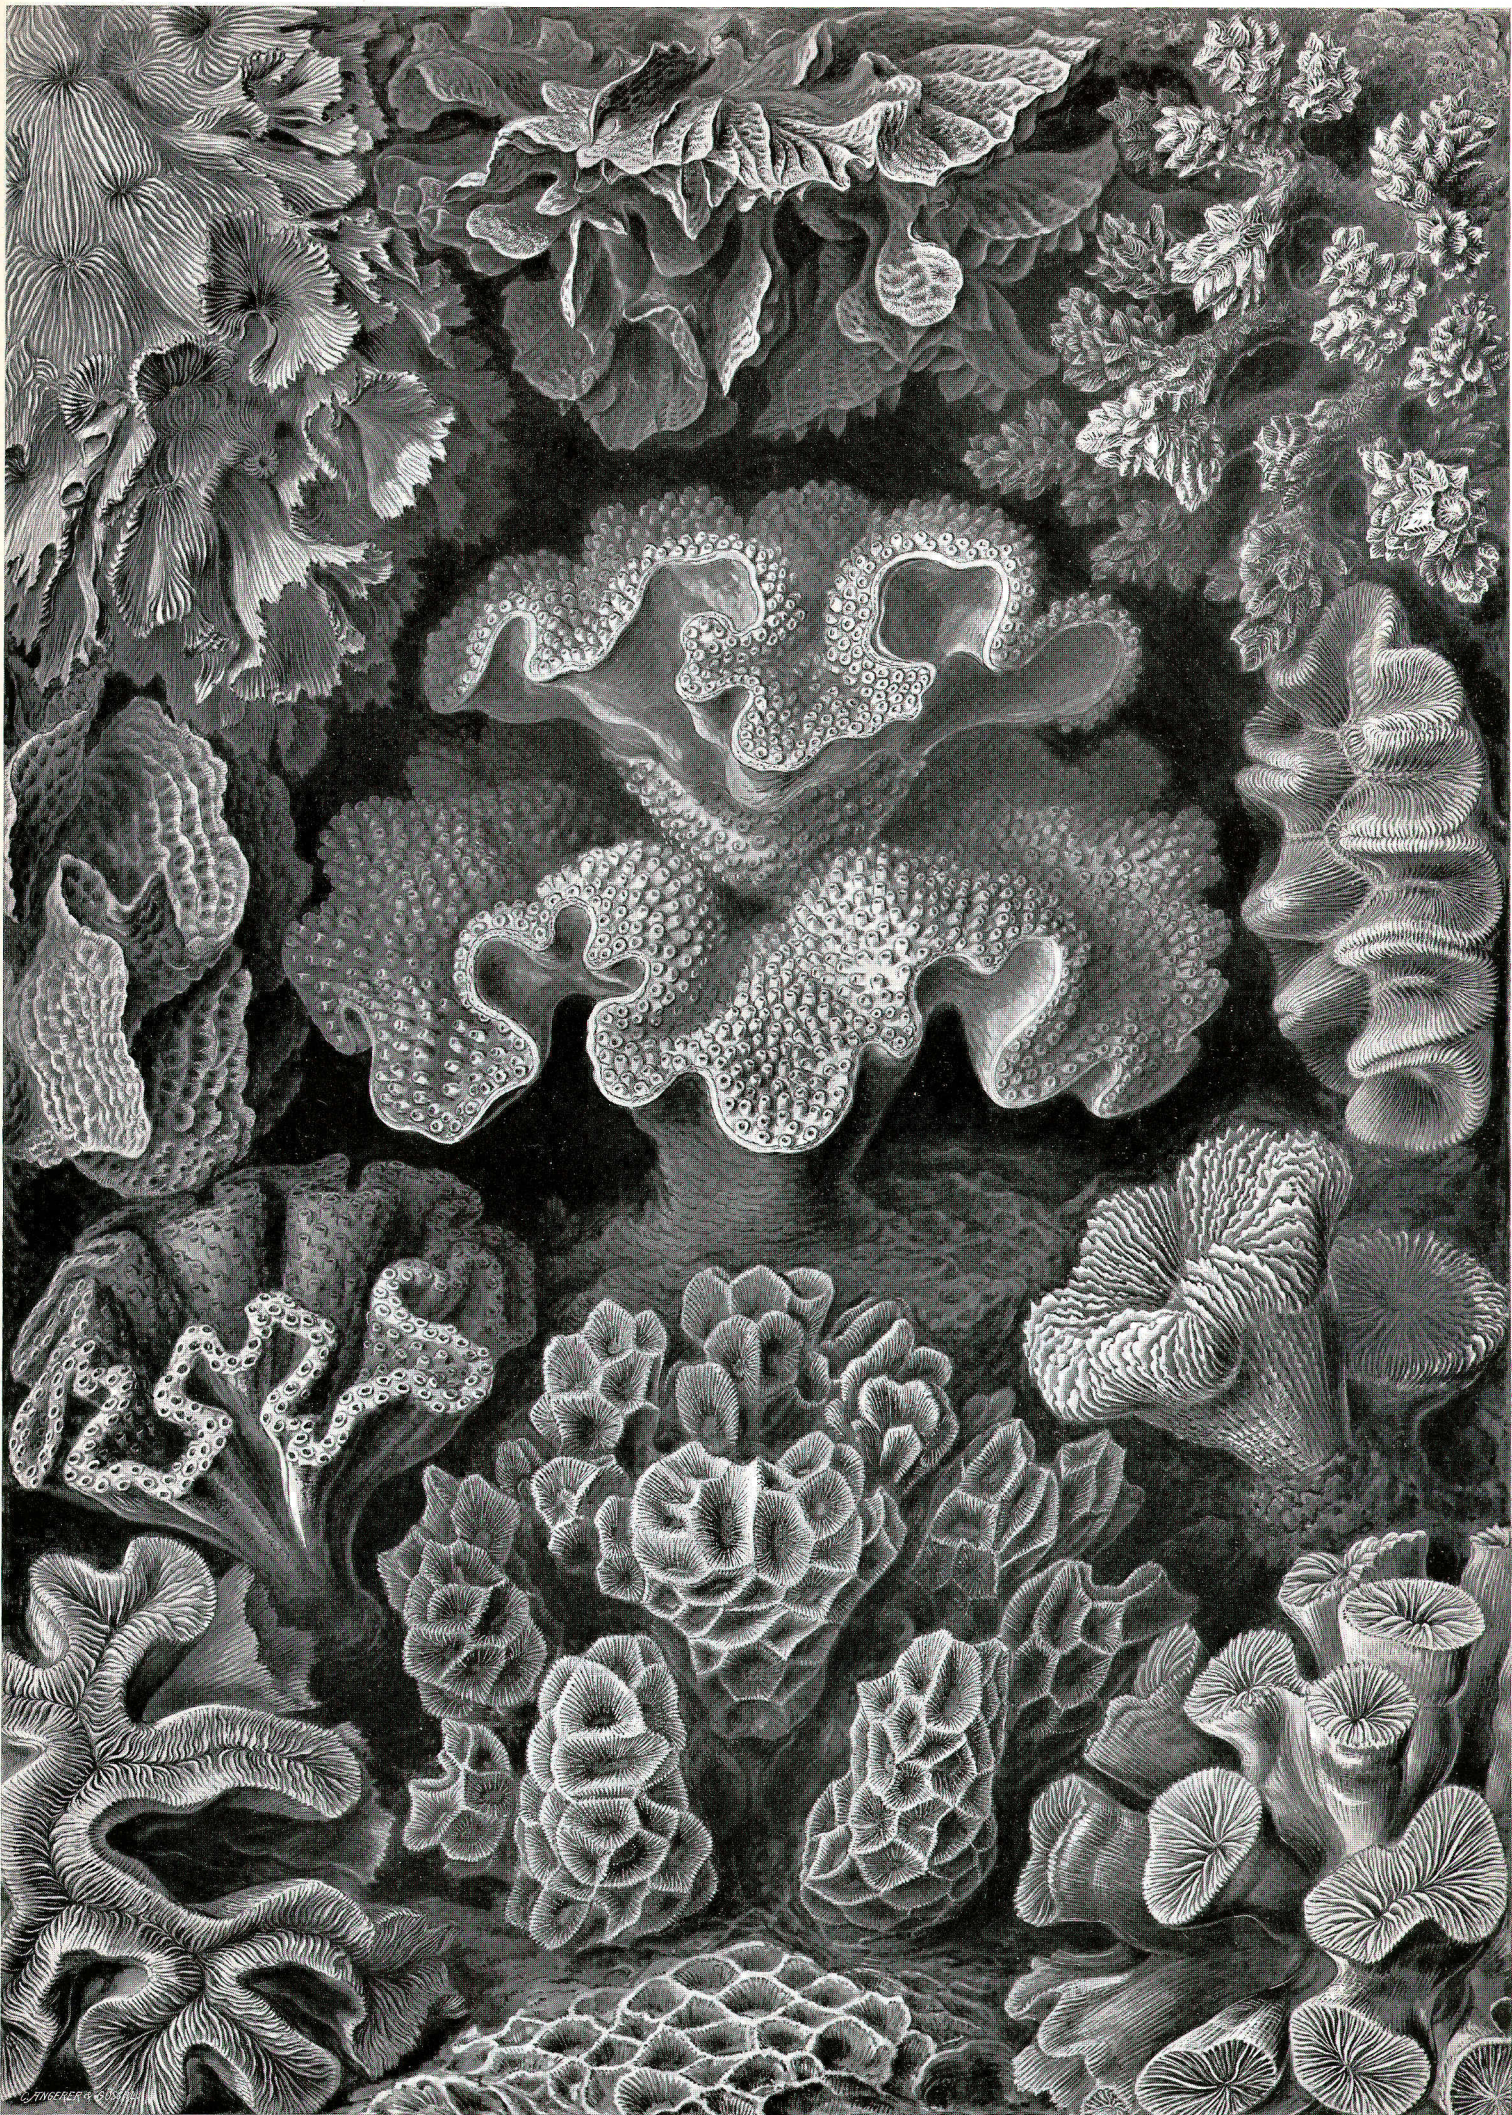

Arachnida. — Spinnentiere.

9
Batrachia. — Frösche.

Hexacoralla. — Sechsstrahlige Sternkorallen.

Cubomedusae. — Würfelquassen.

Lacertilia. — Eidechsen.

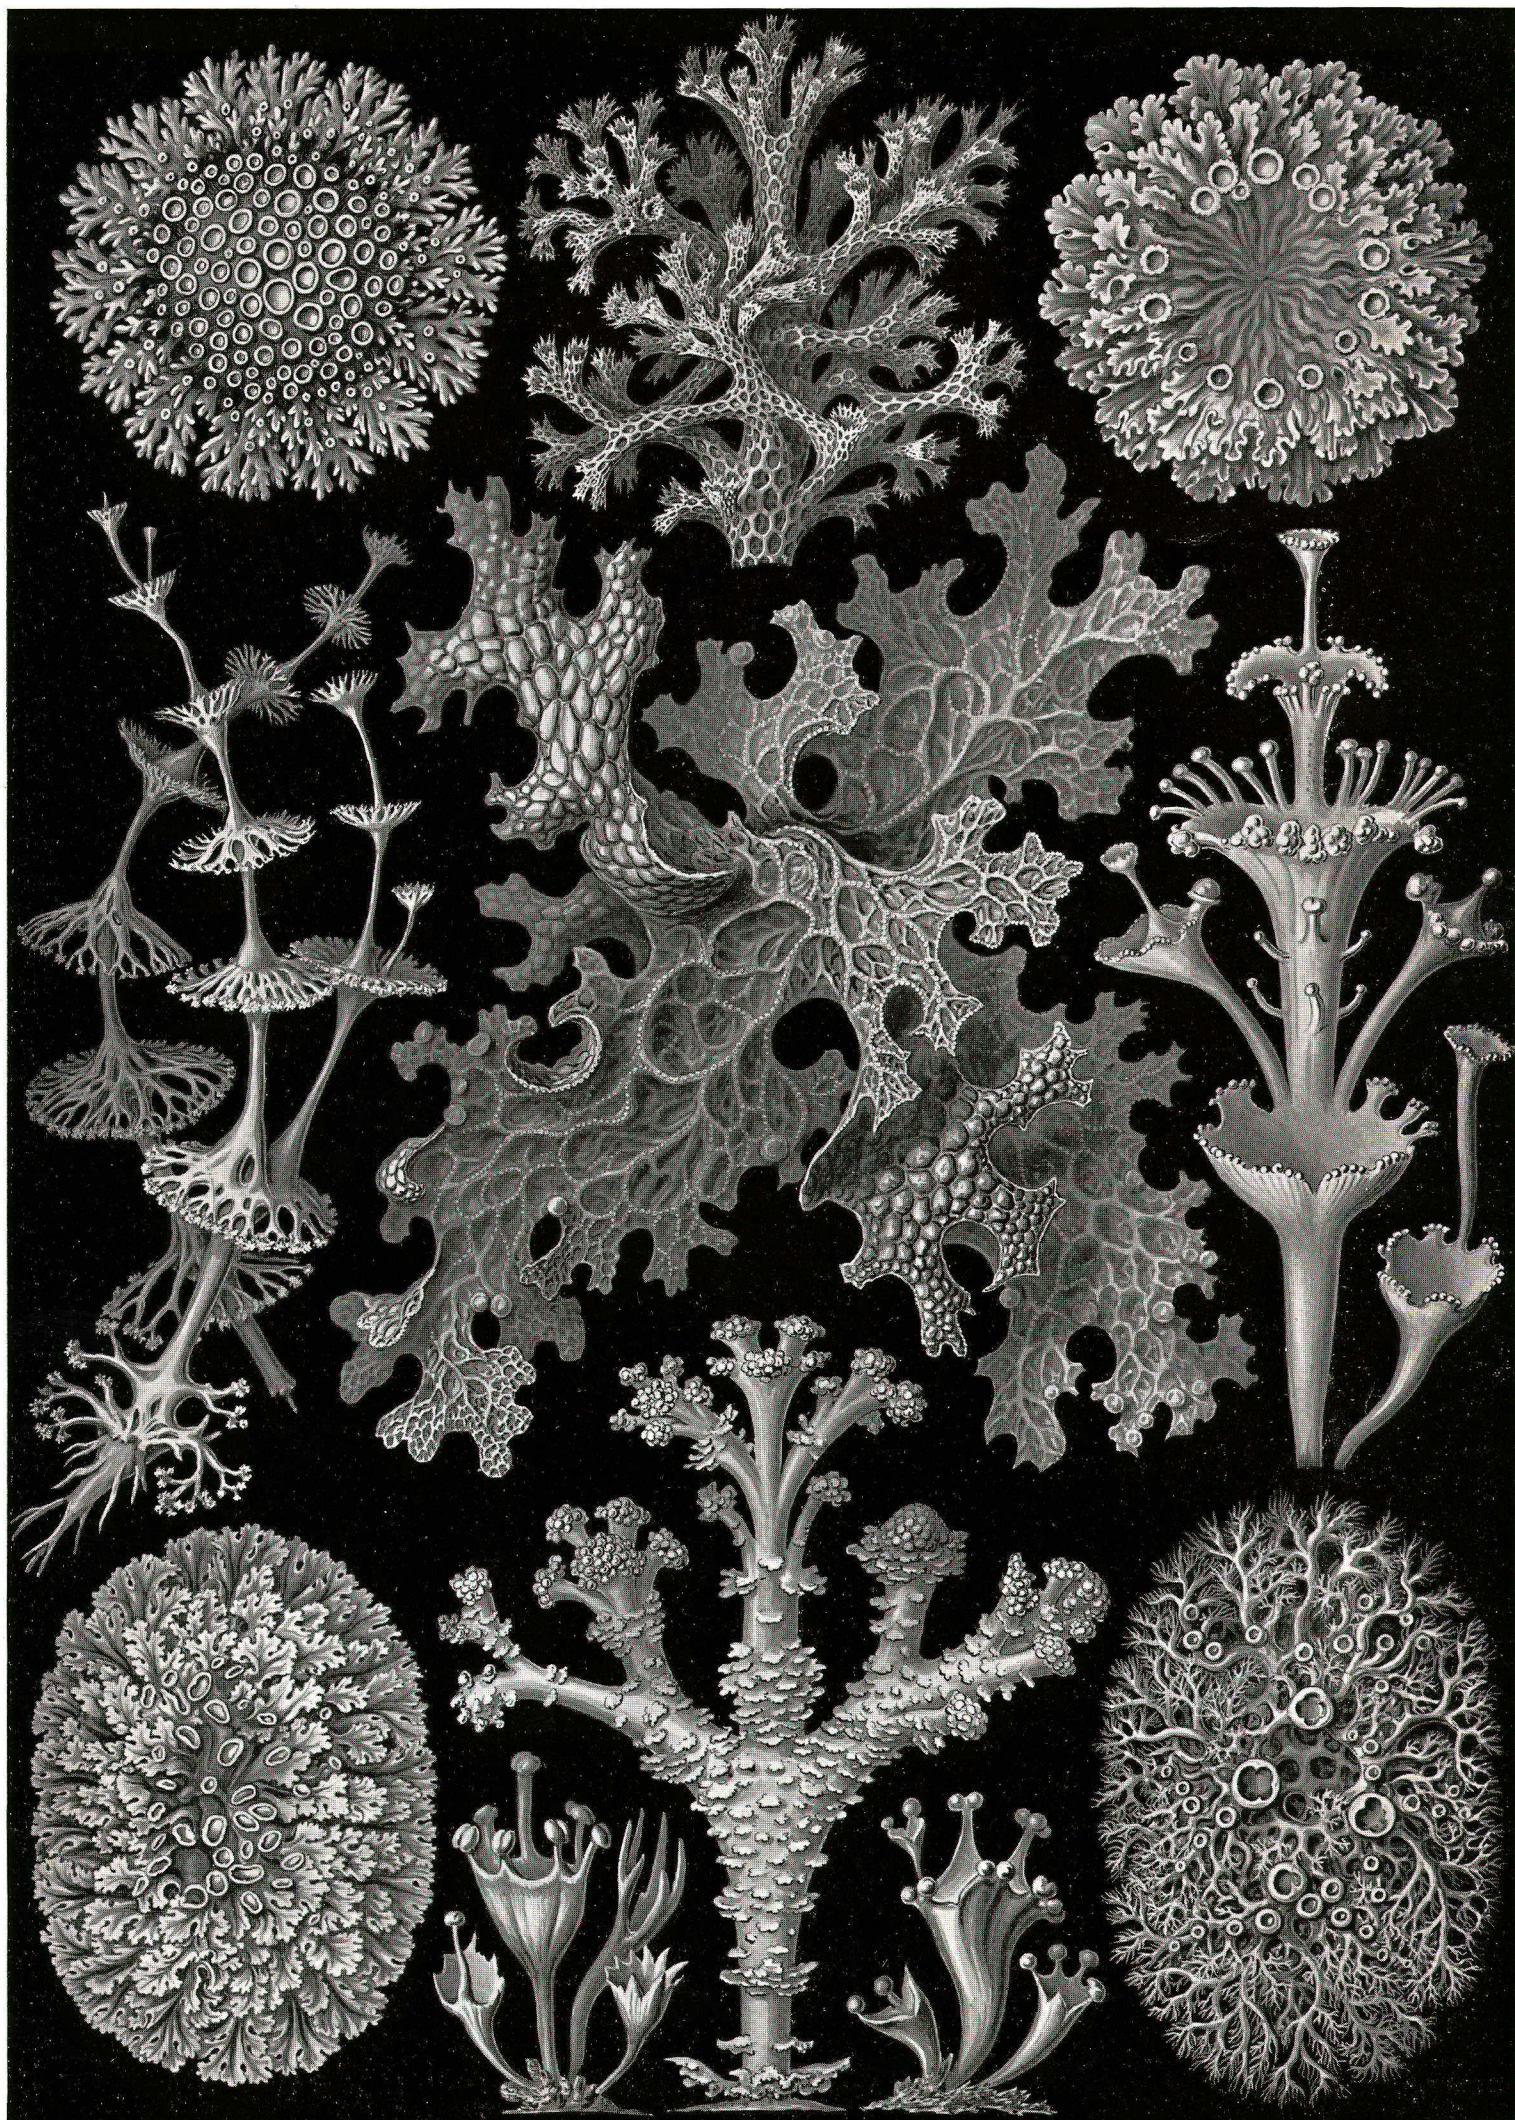

Blastoïdea. — *Ähnospensterne*.

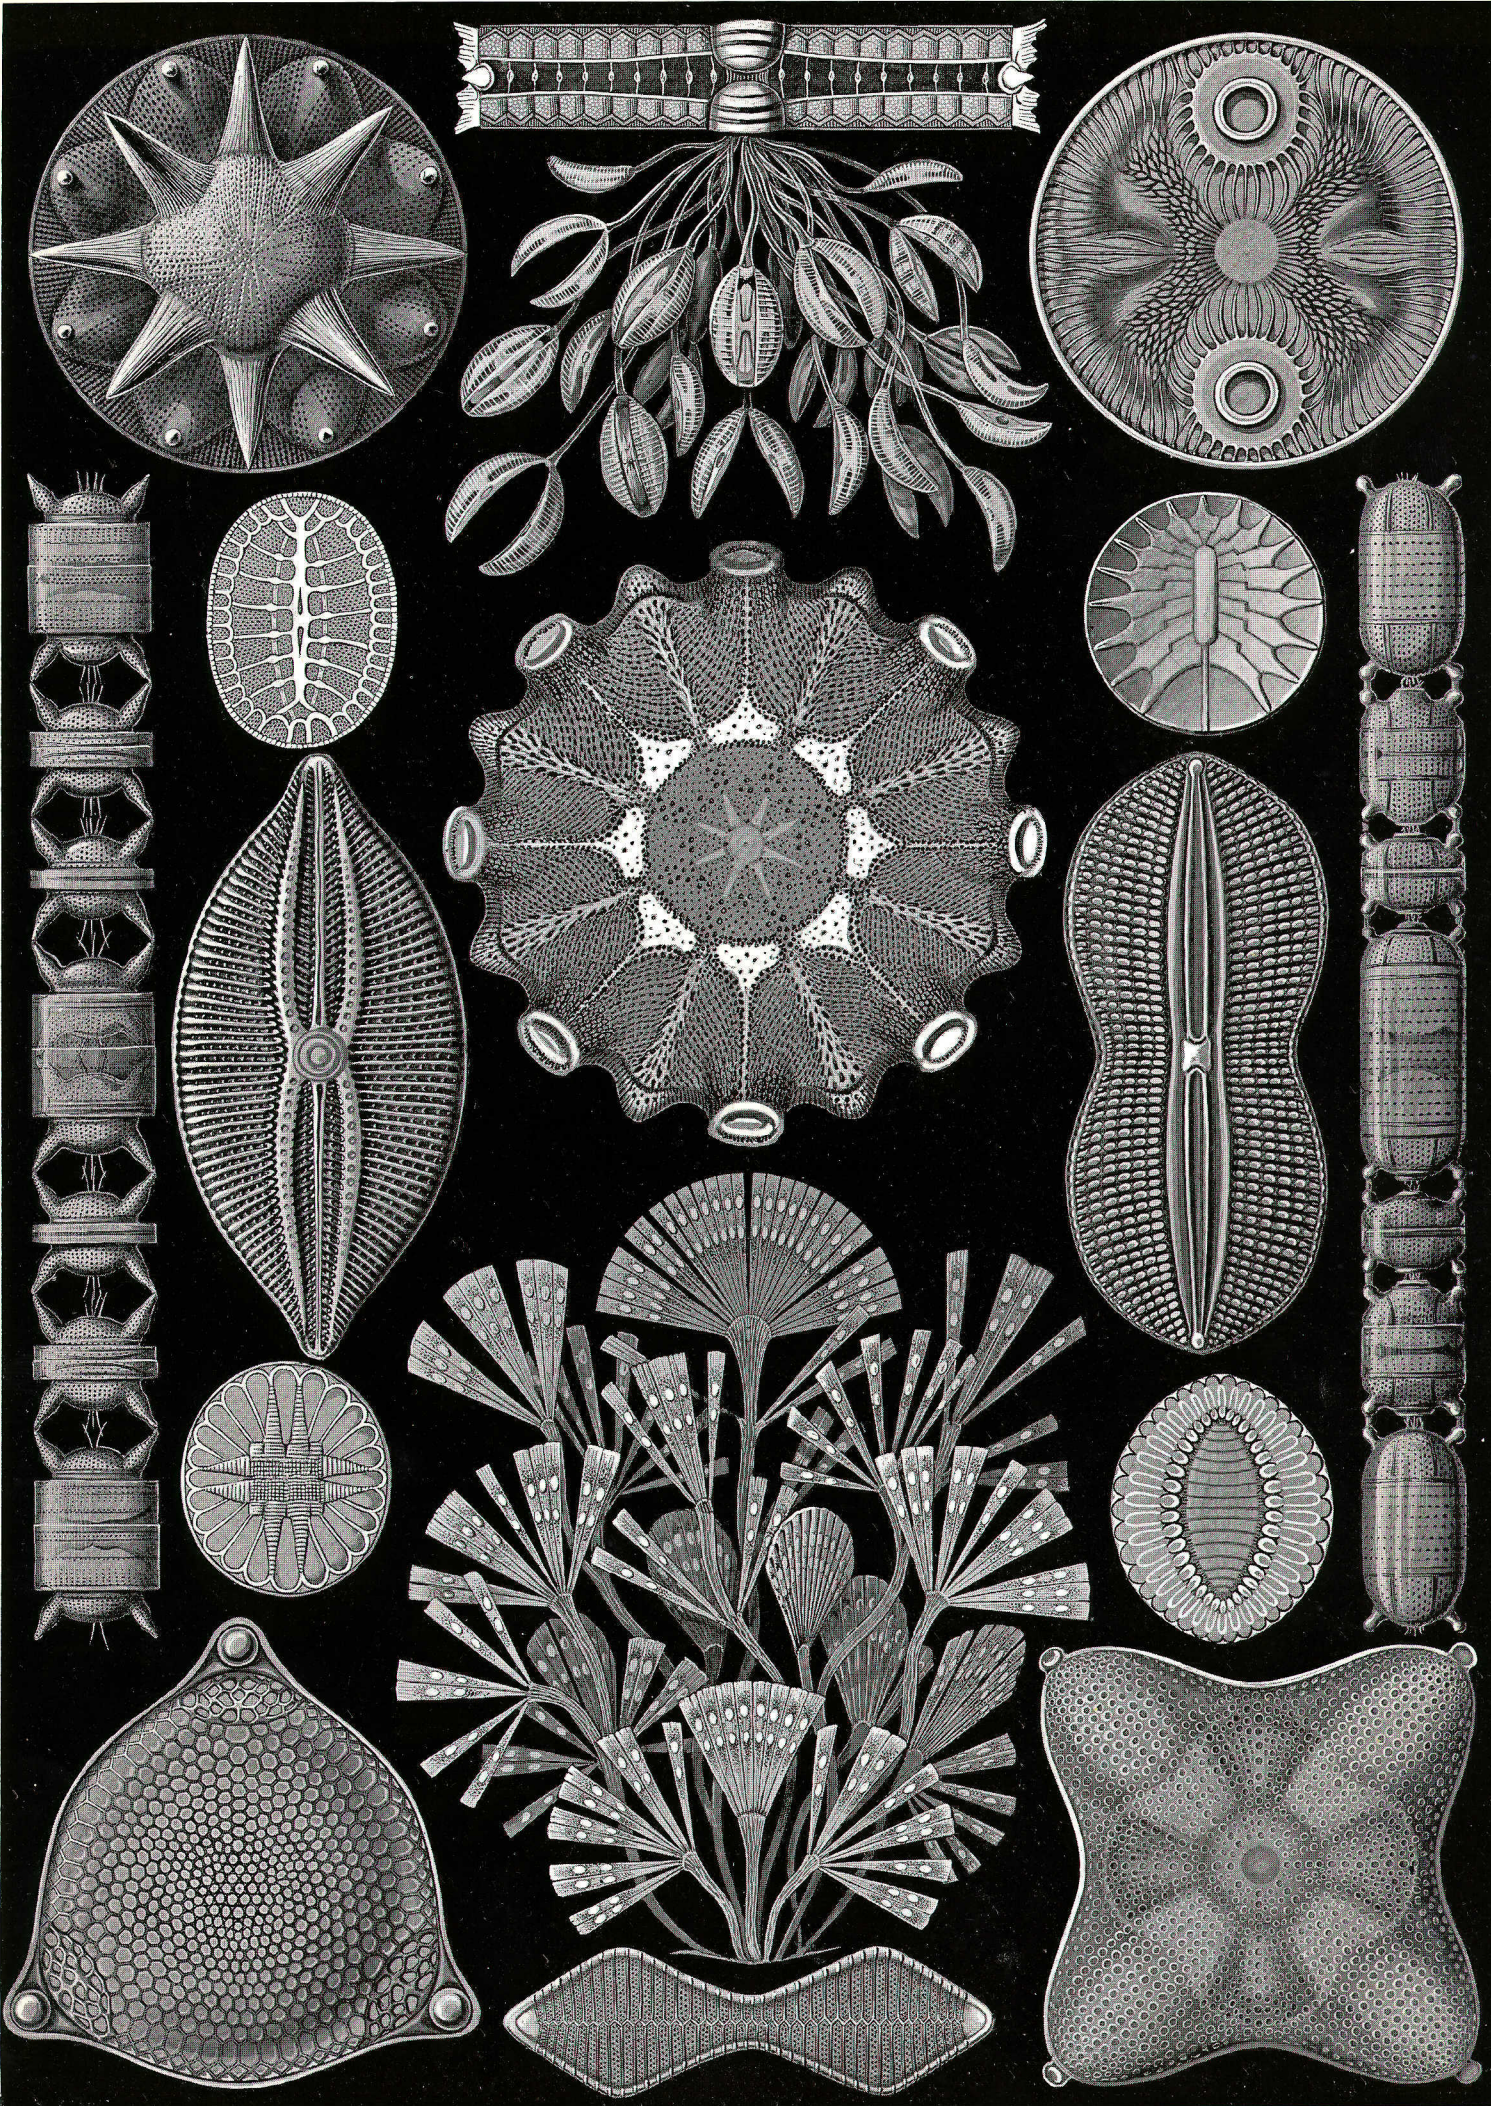

Thalamophora. — Stammerlinge.

Hepaticae. — Lebermoose.

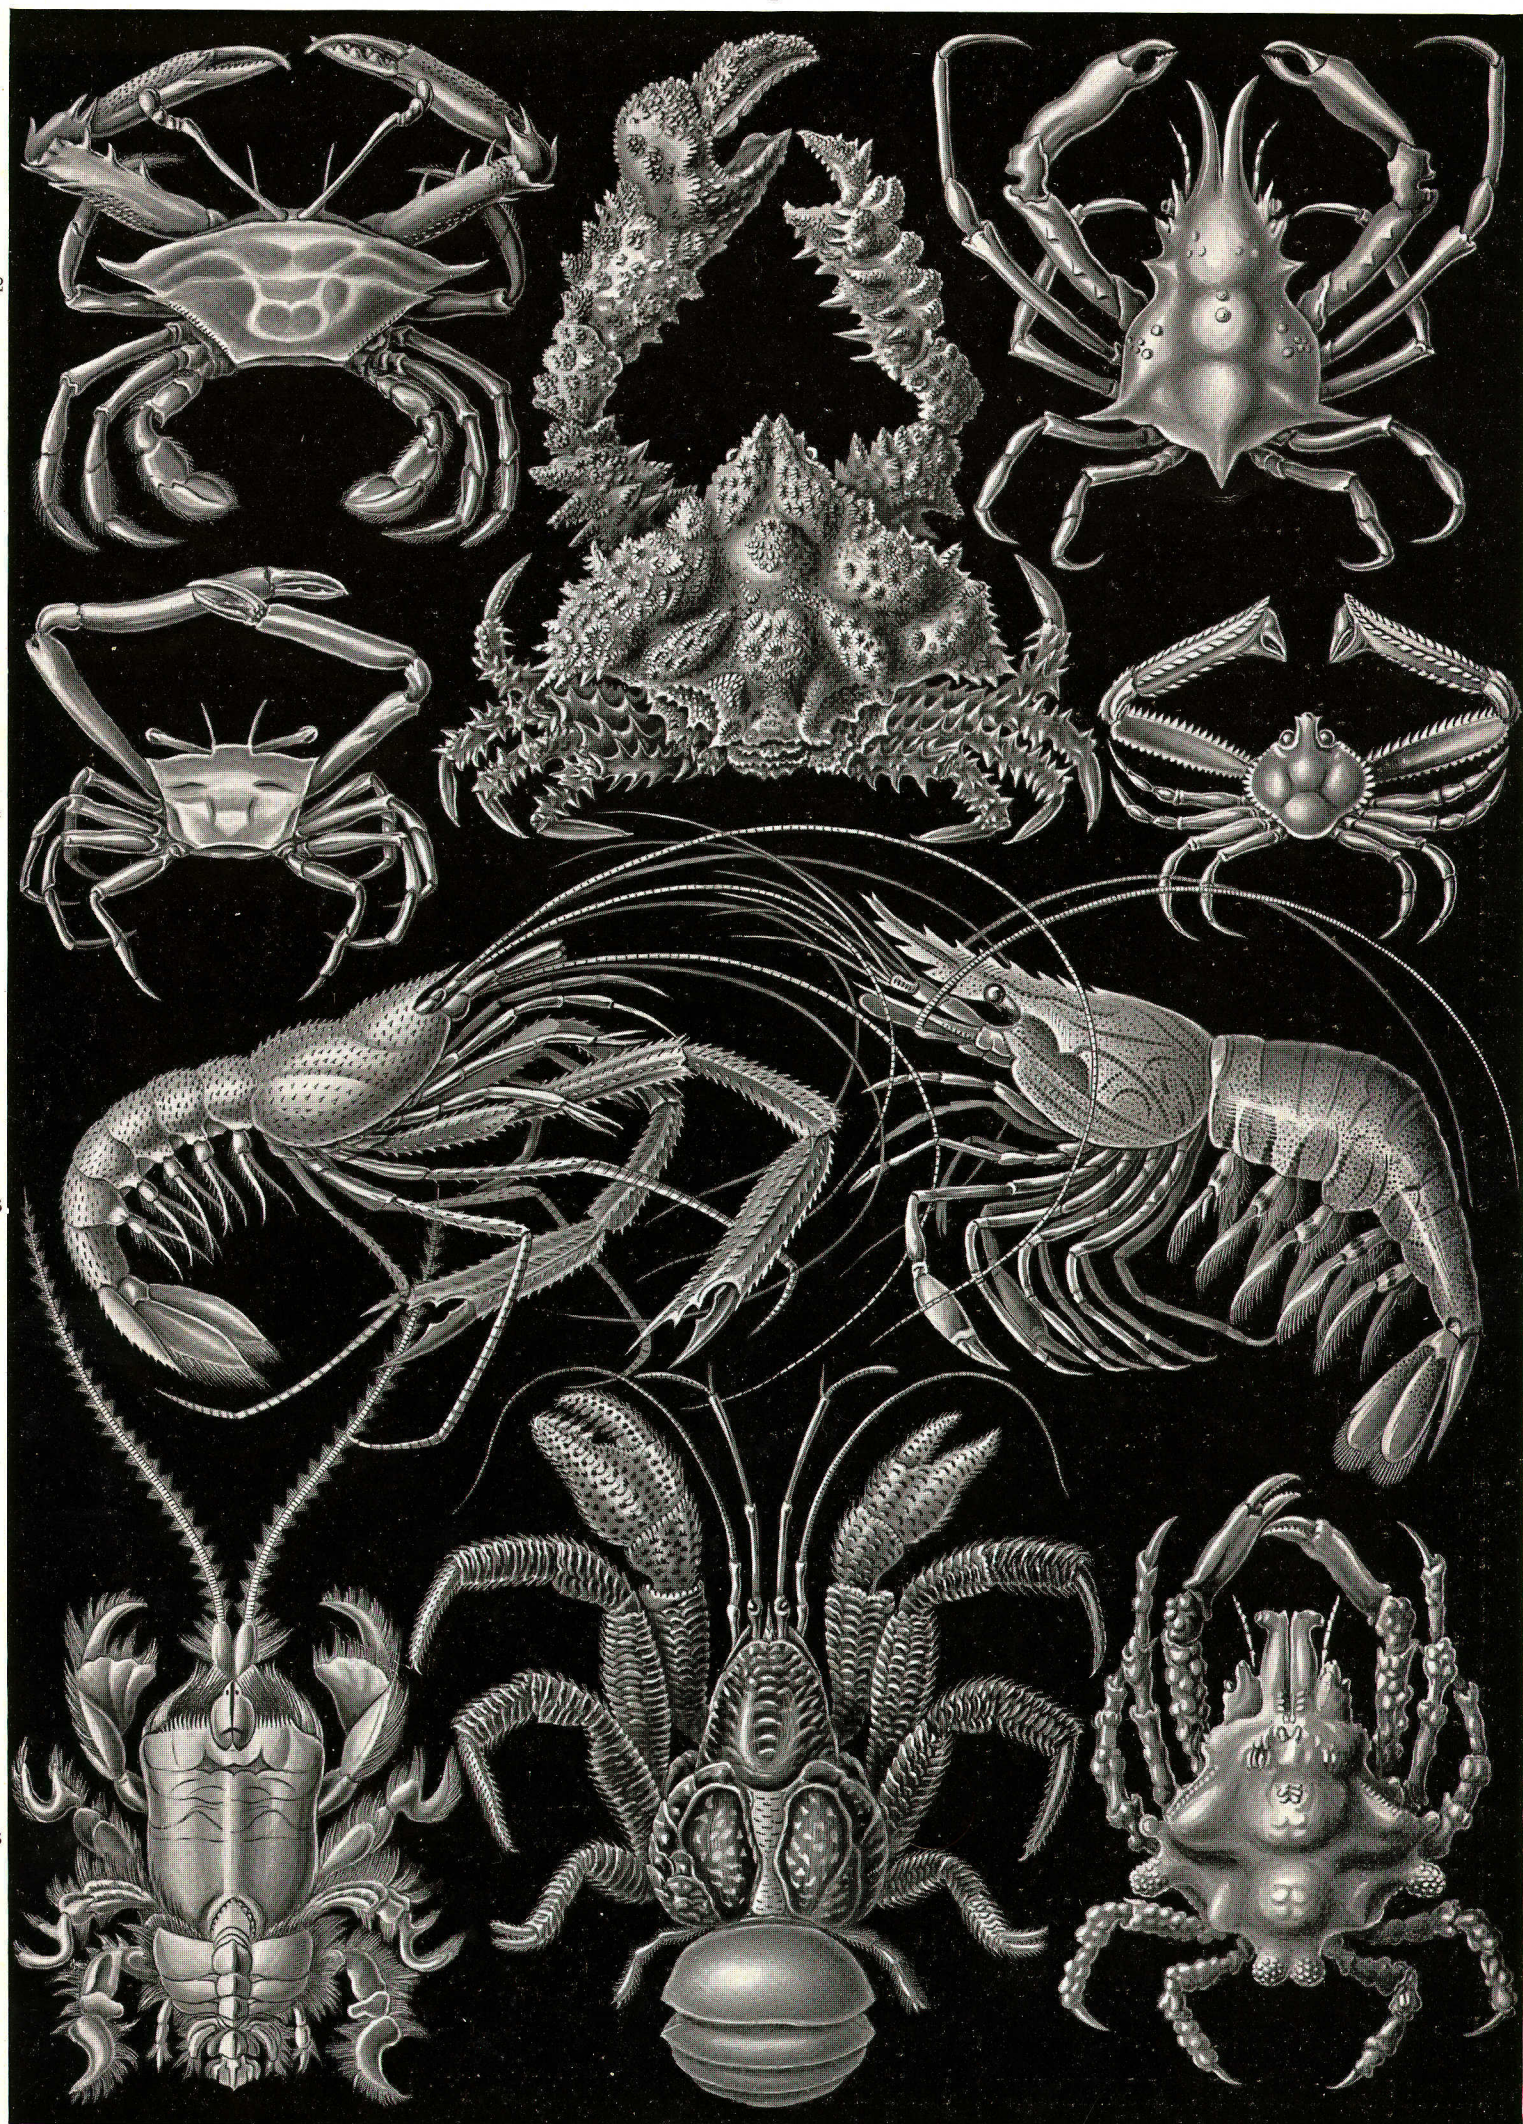

Lichenes. — Flechten.

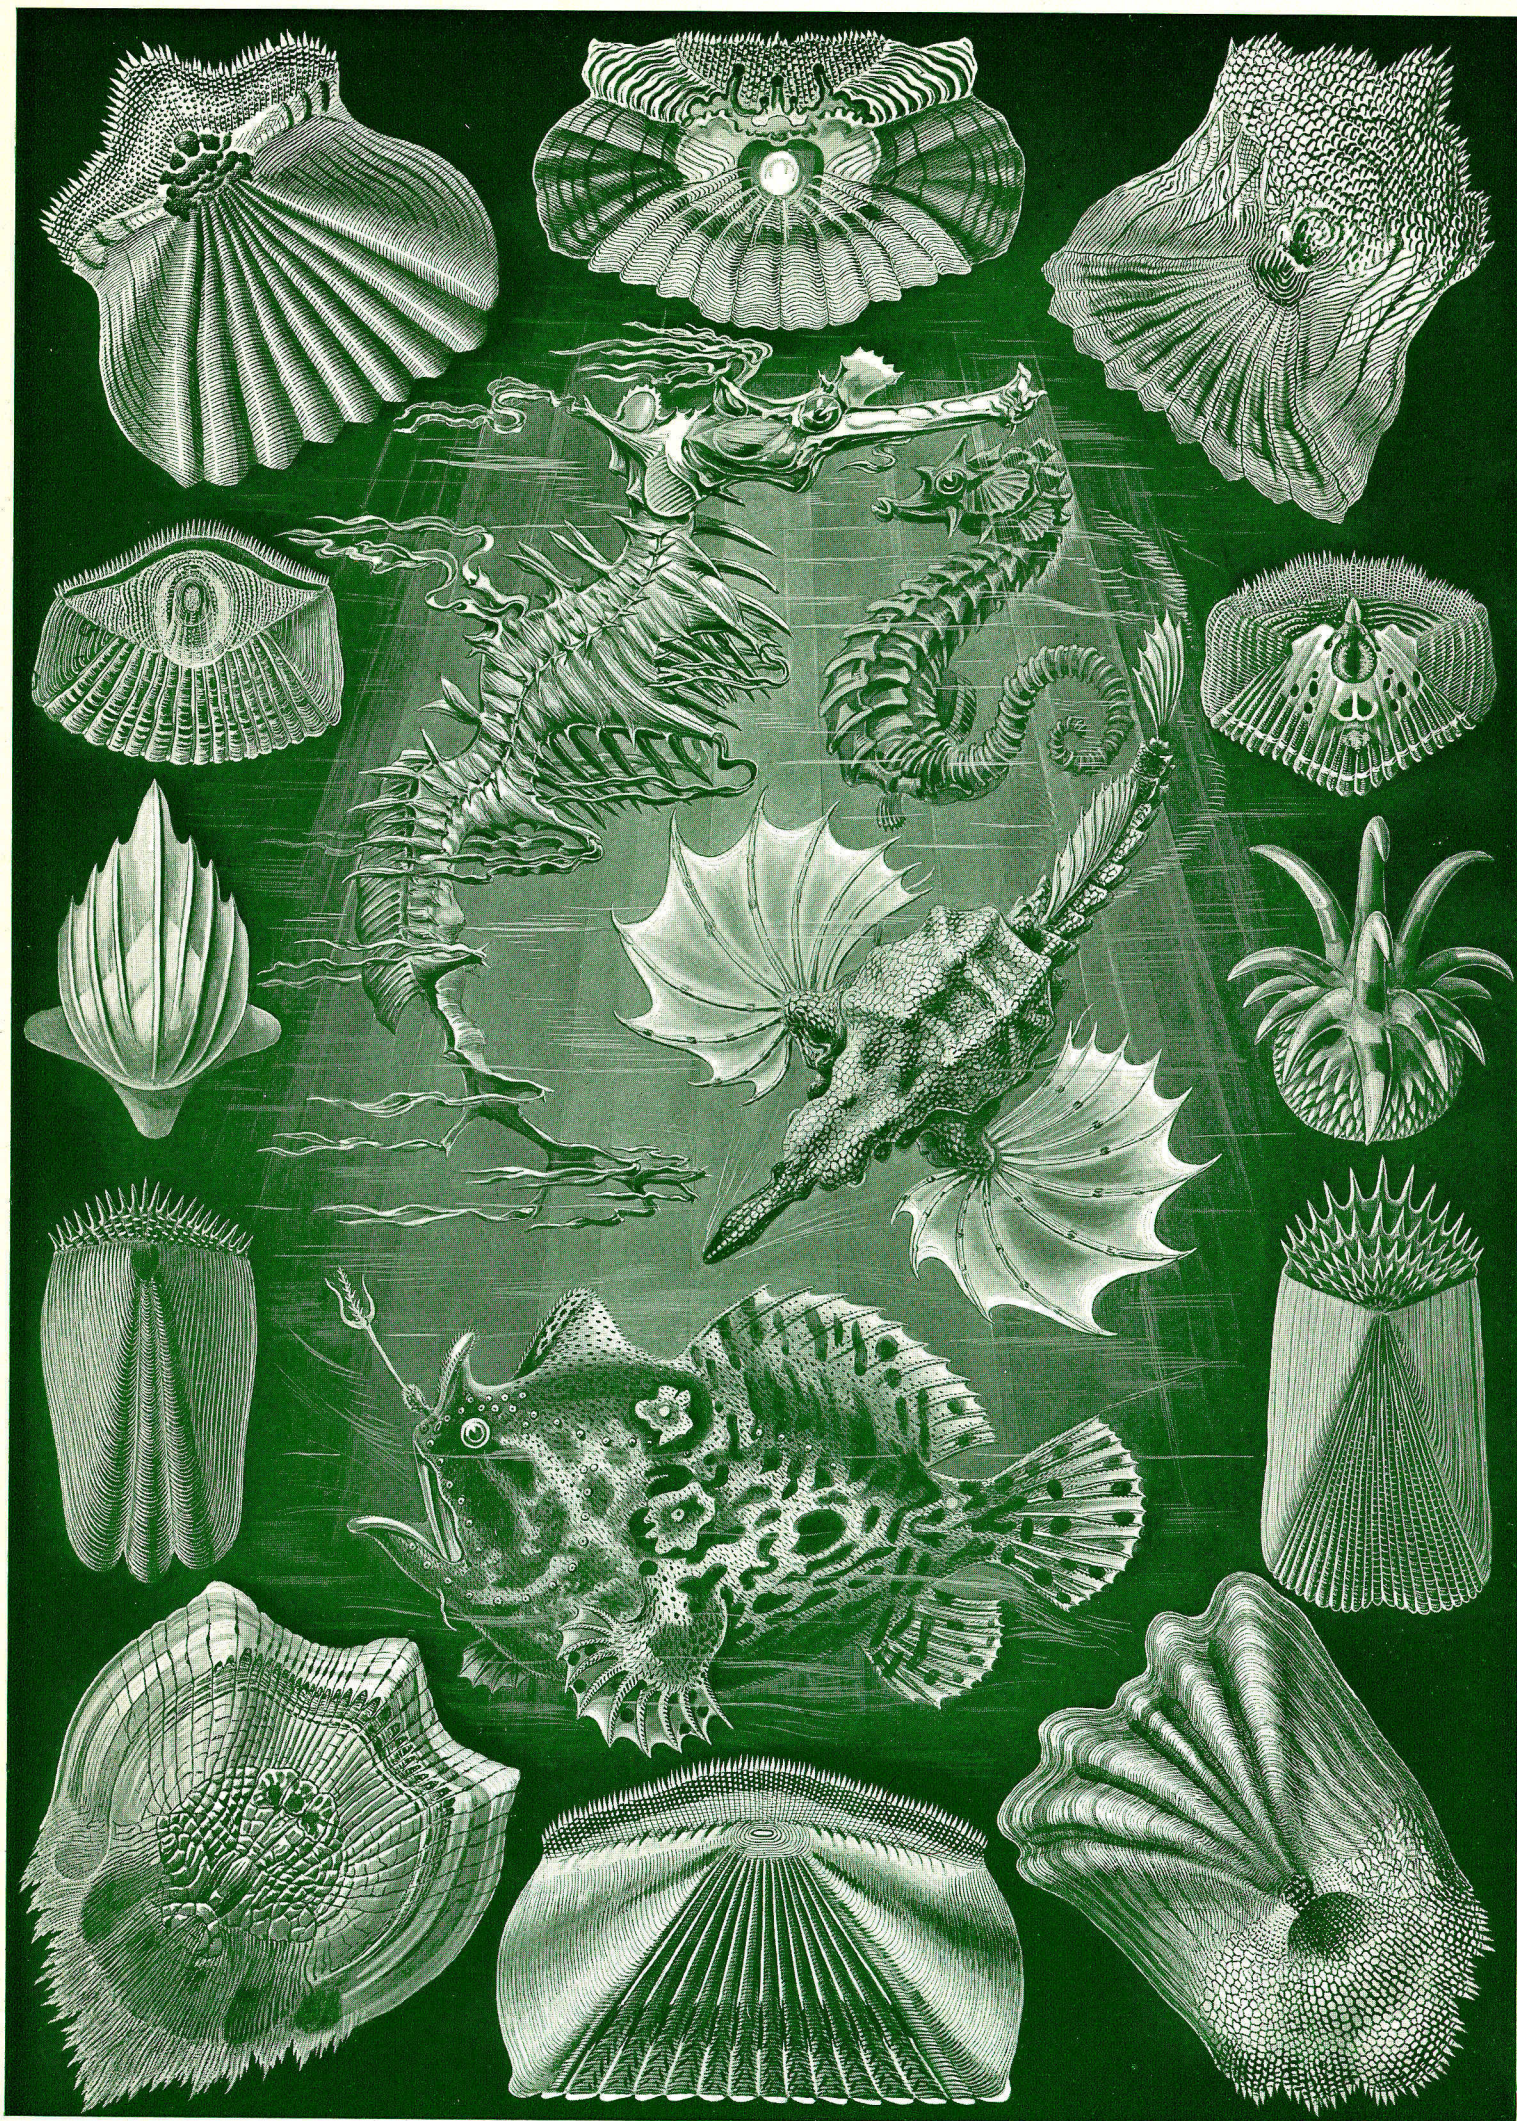

Diatomea. — Schachtellinge.

Ascidiae. — Geescheiden.

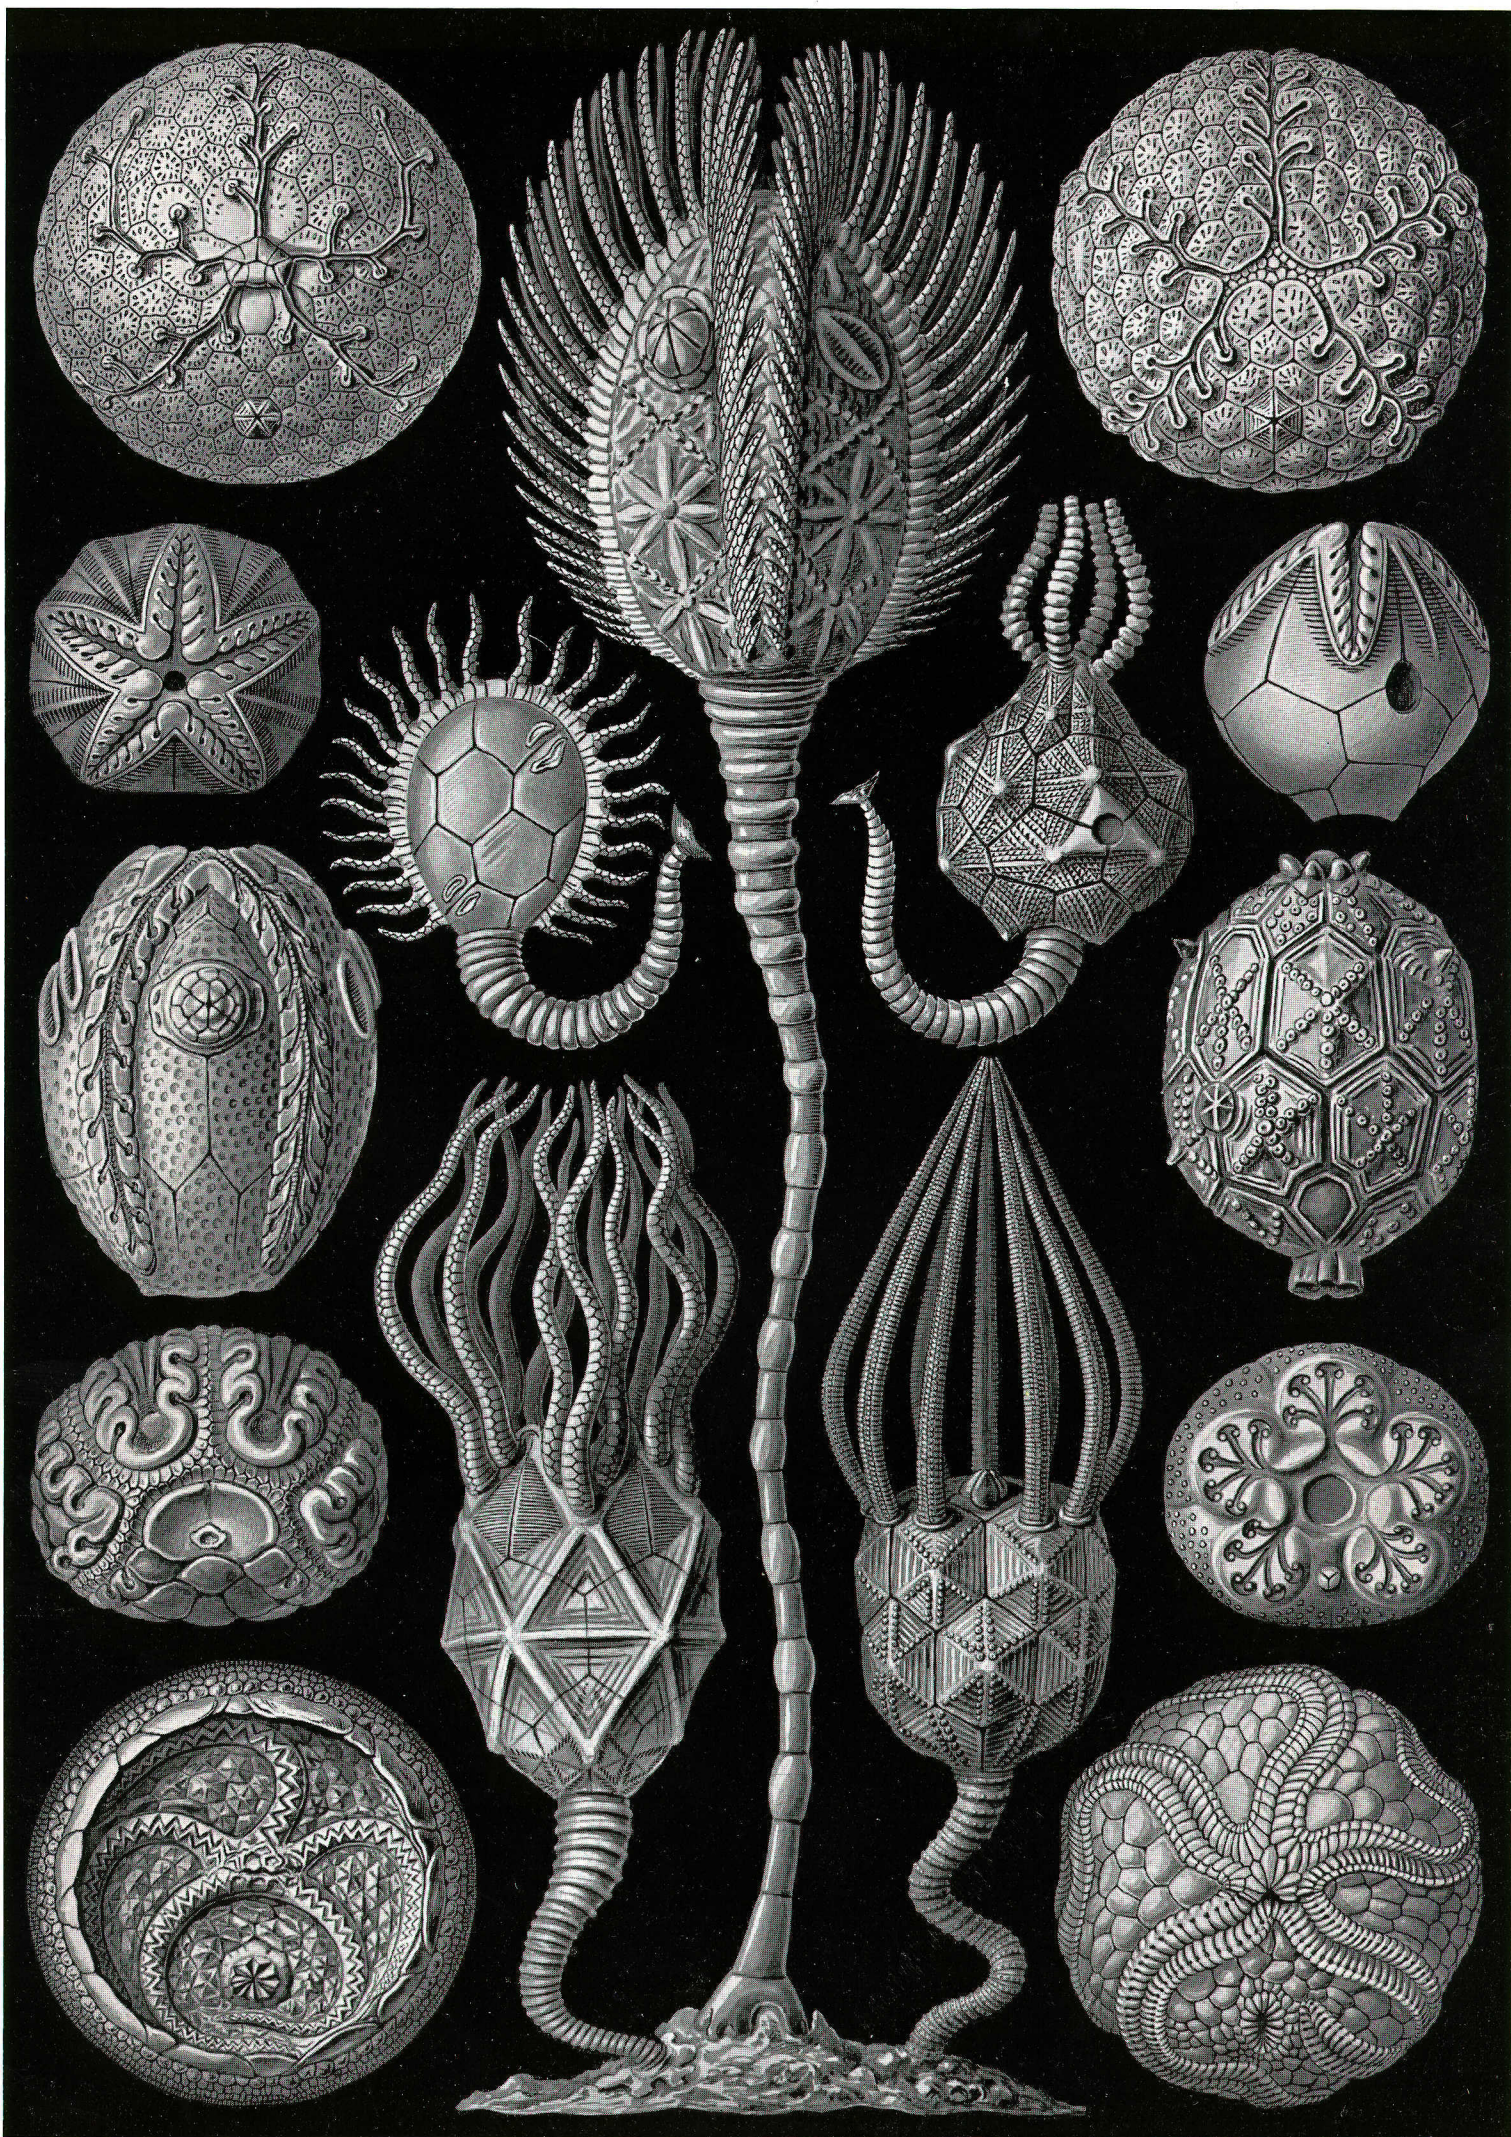

Teleostei. — Knochenfische.

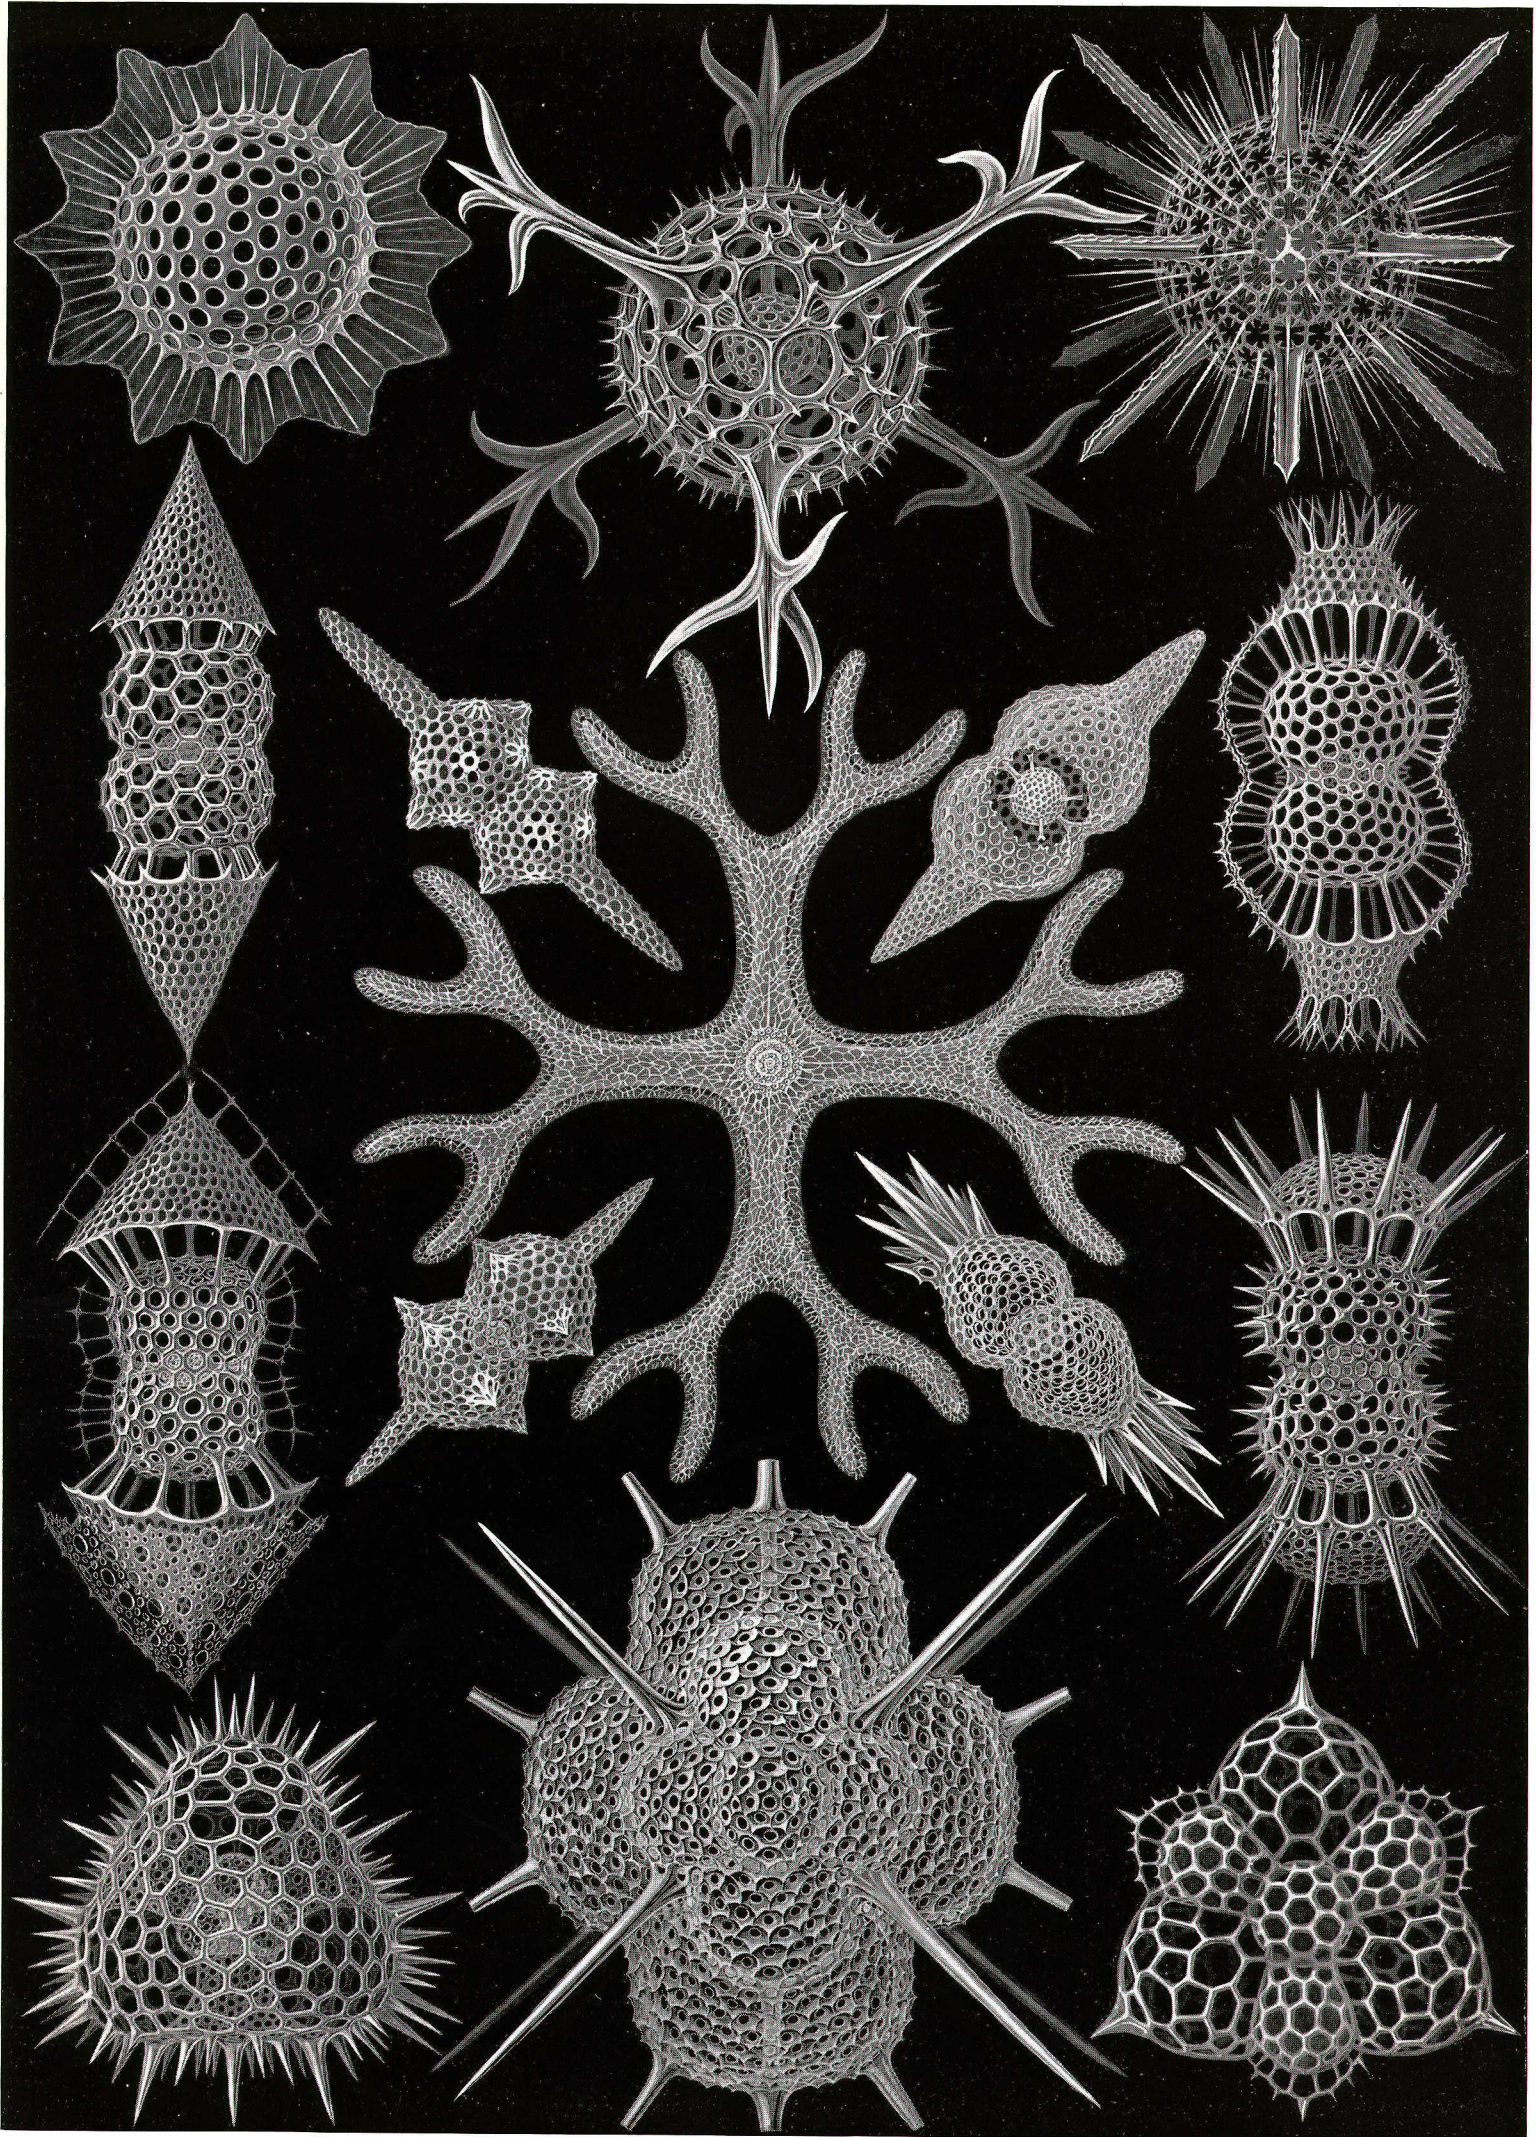

Discomedusae. — Scheibenquallen.

Chelonia. — Schildkröten.

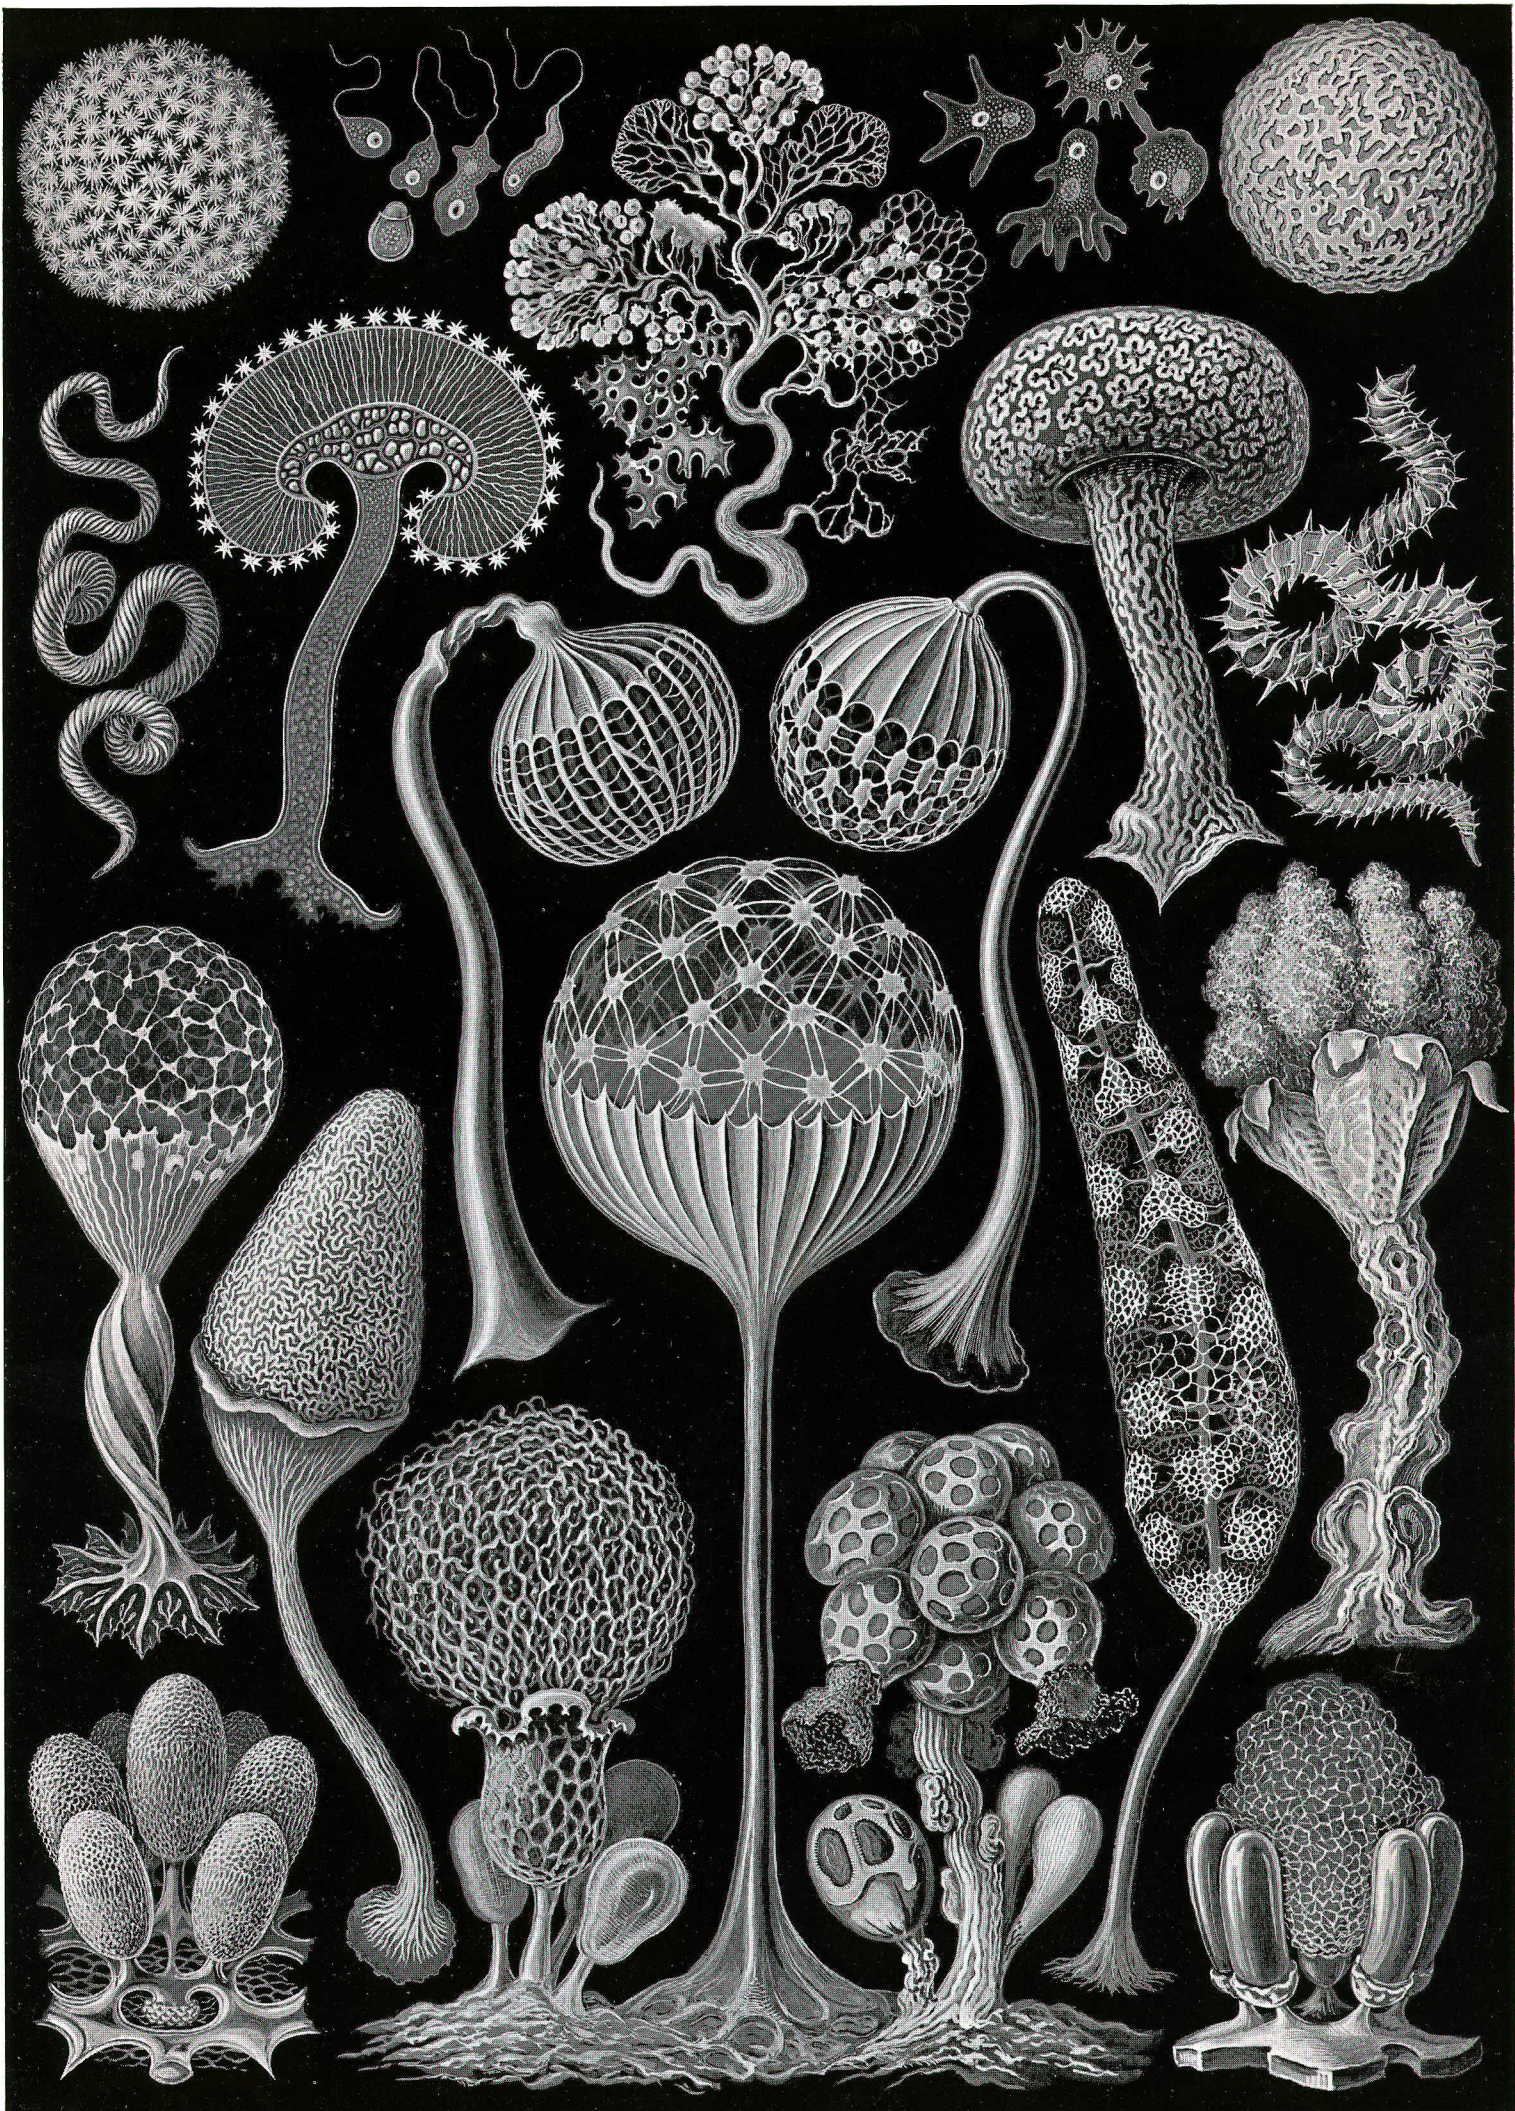

Cystoidea. — Beutelfferne.

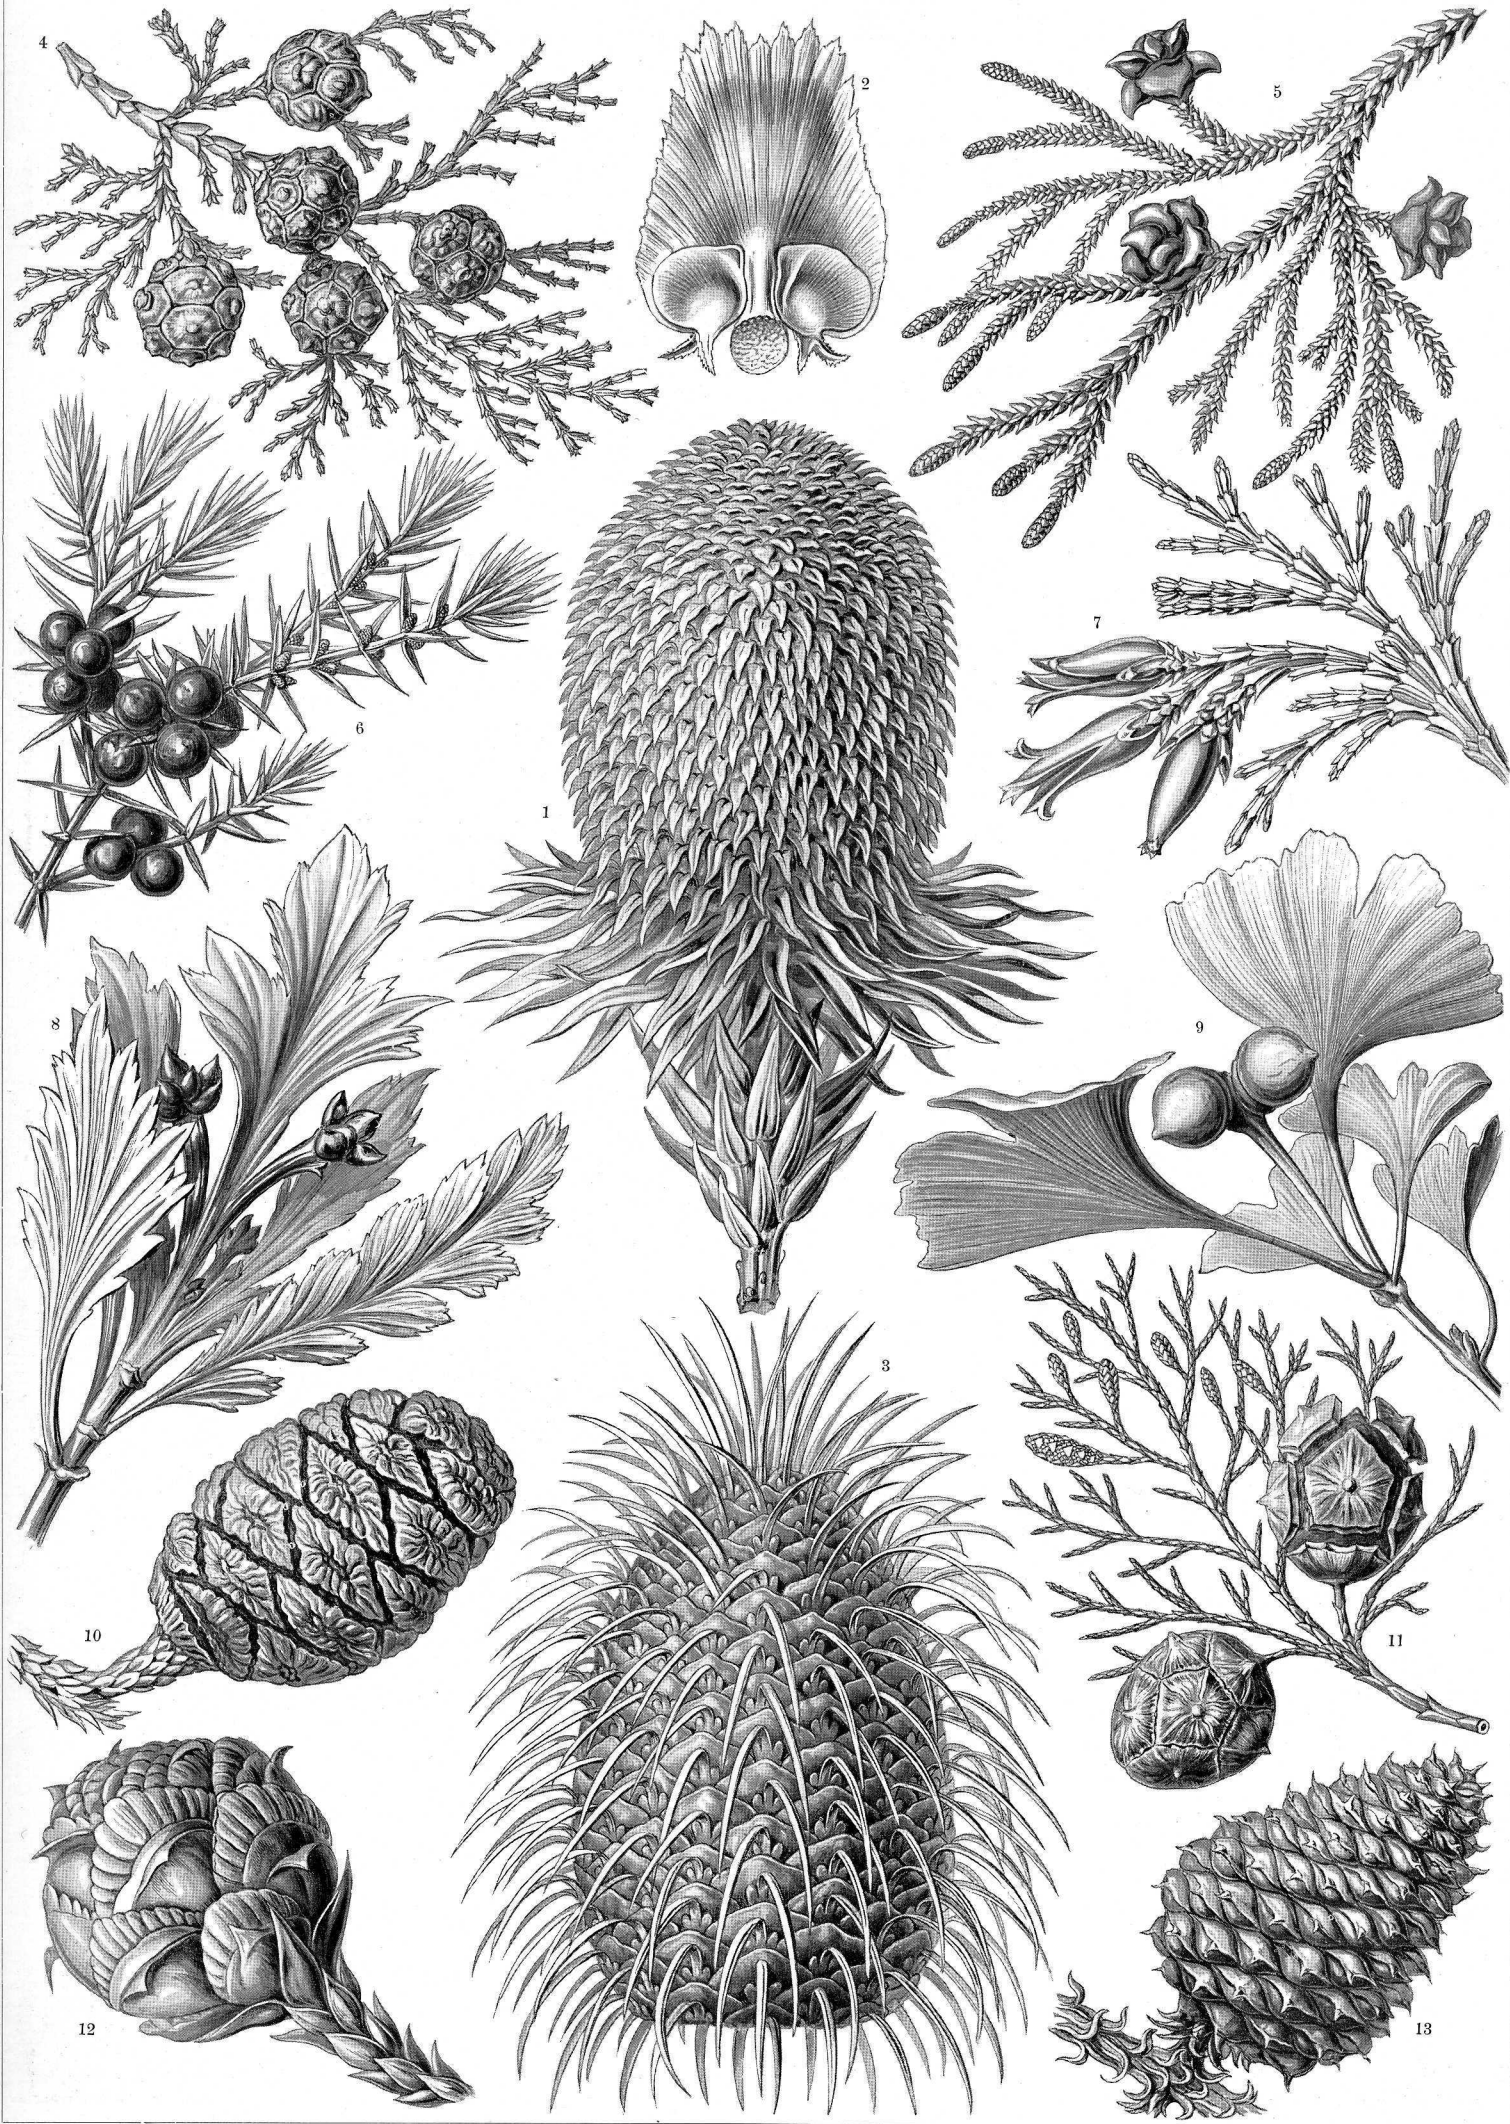

Spumellaria. — Schaumstrahllinge.

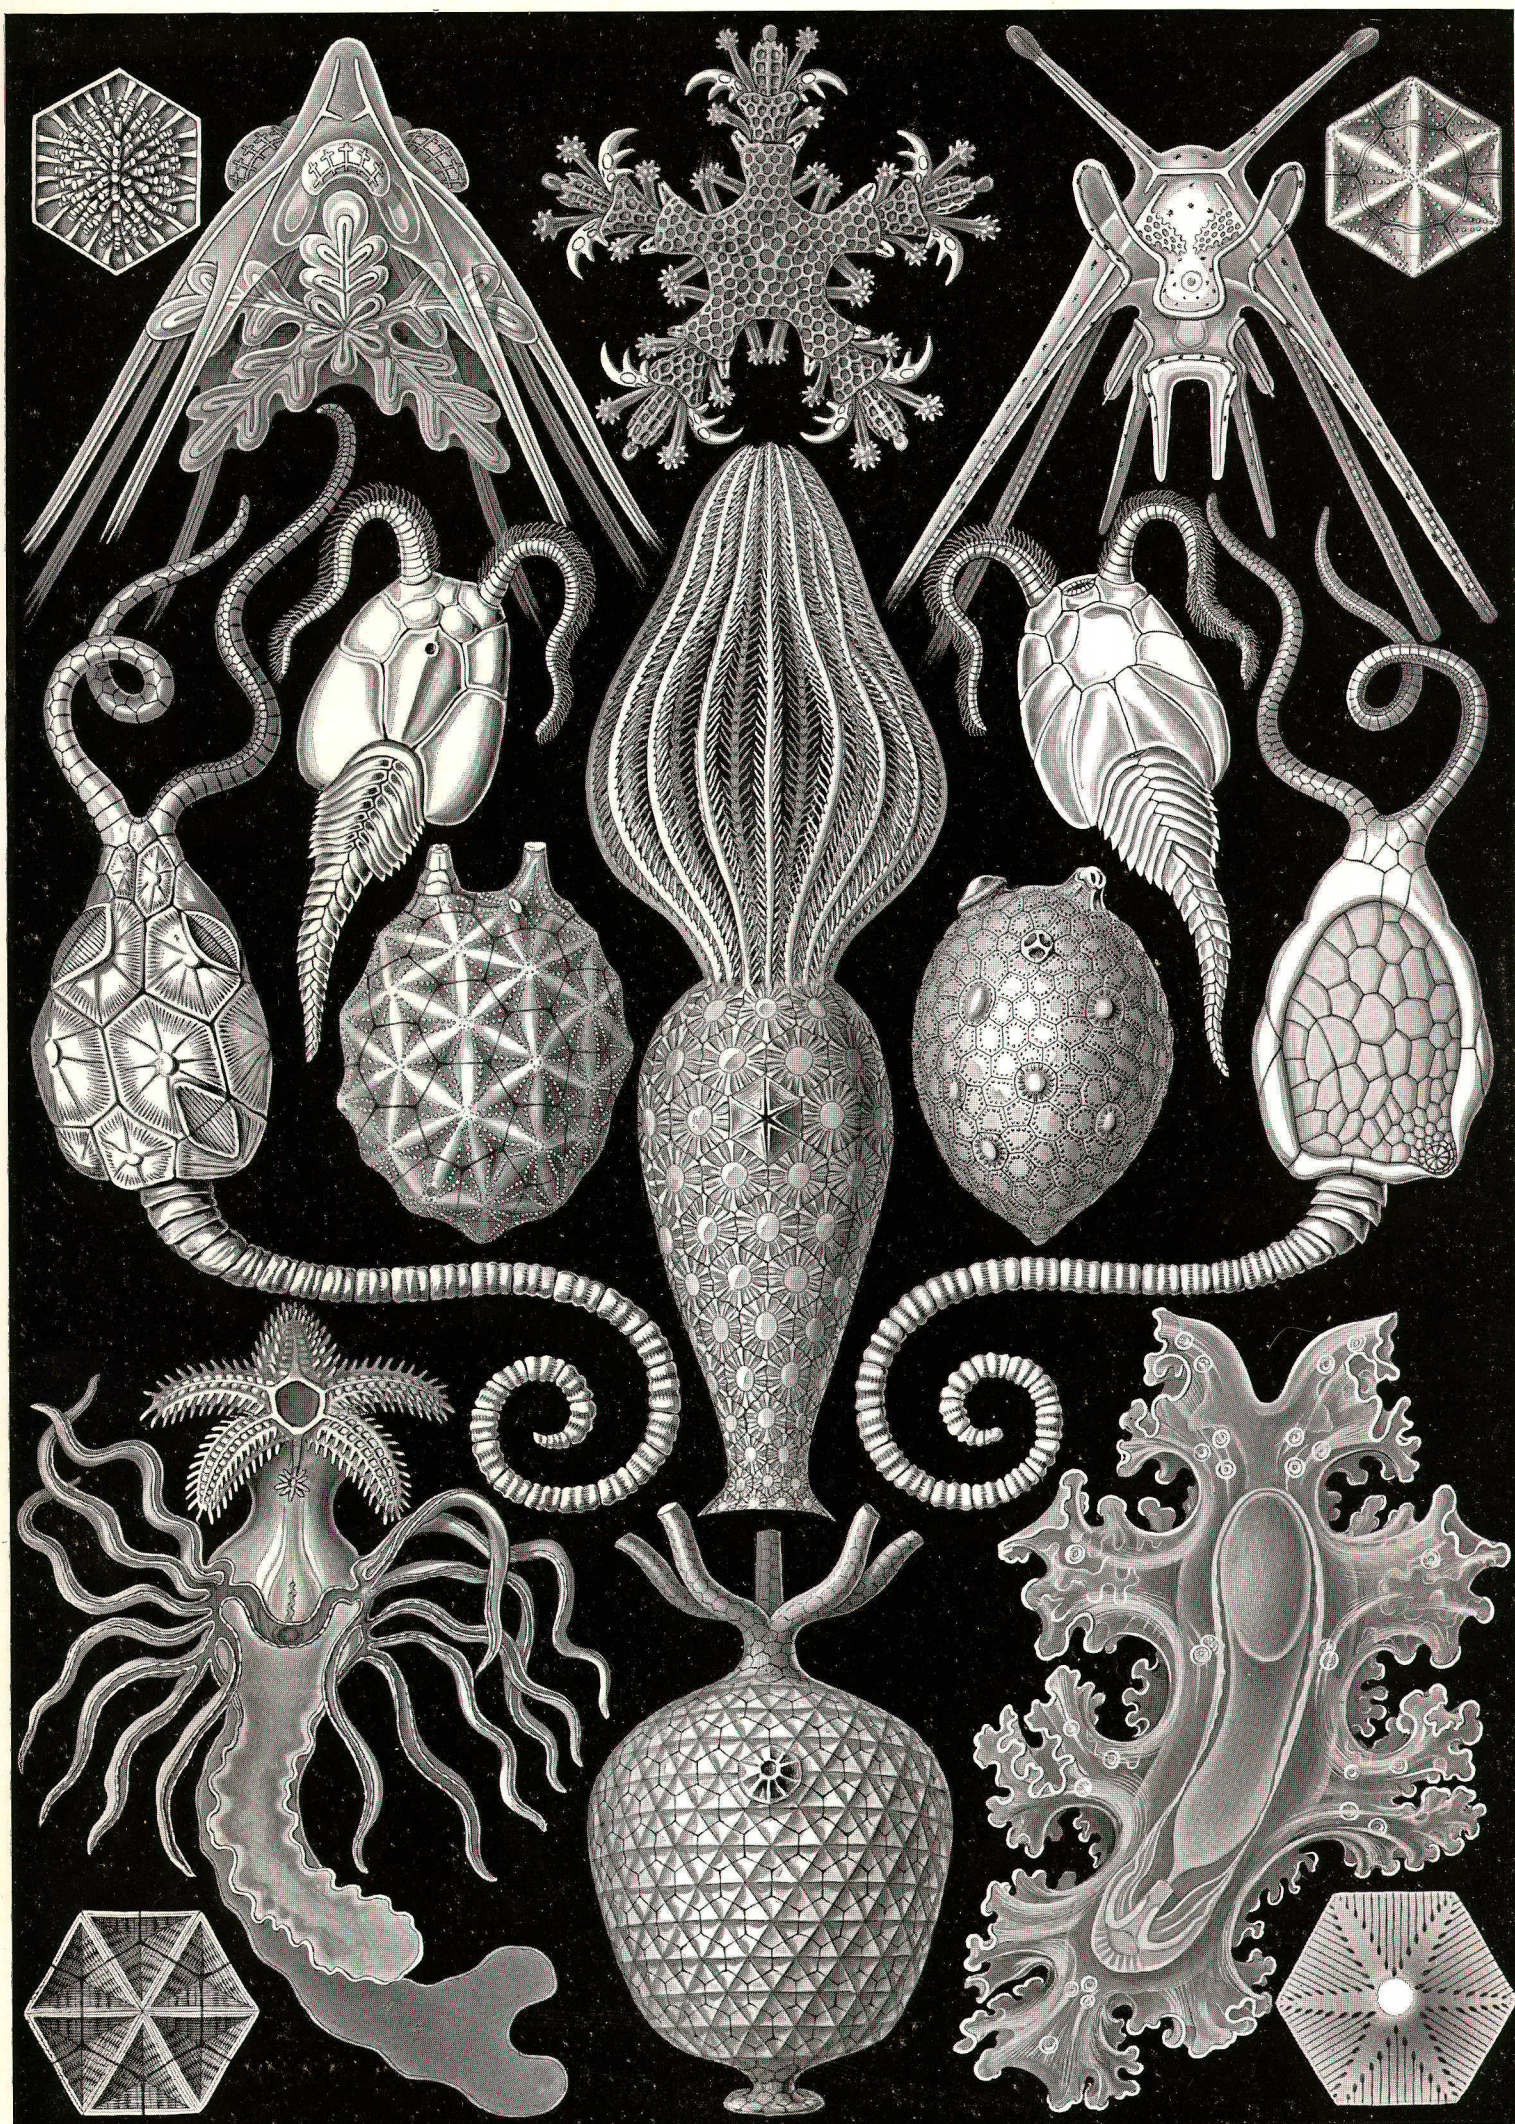

Filicinae. — Laubfarne.

Mycetozoa. — Pilztiere.

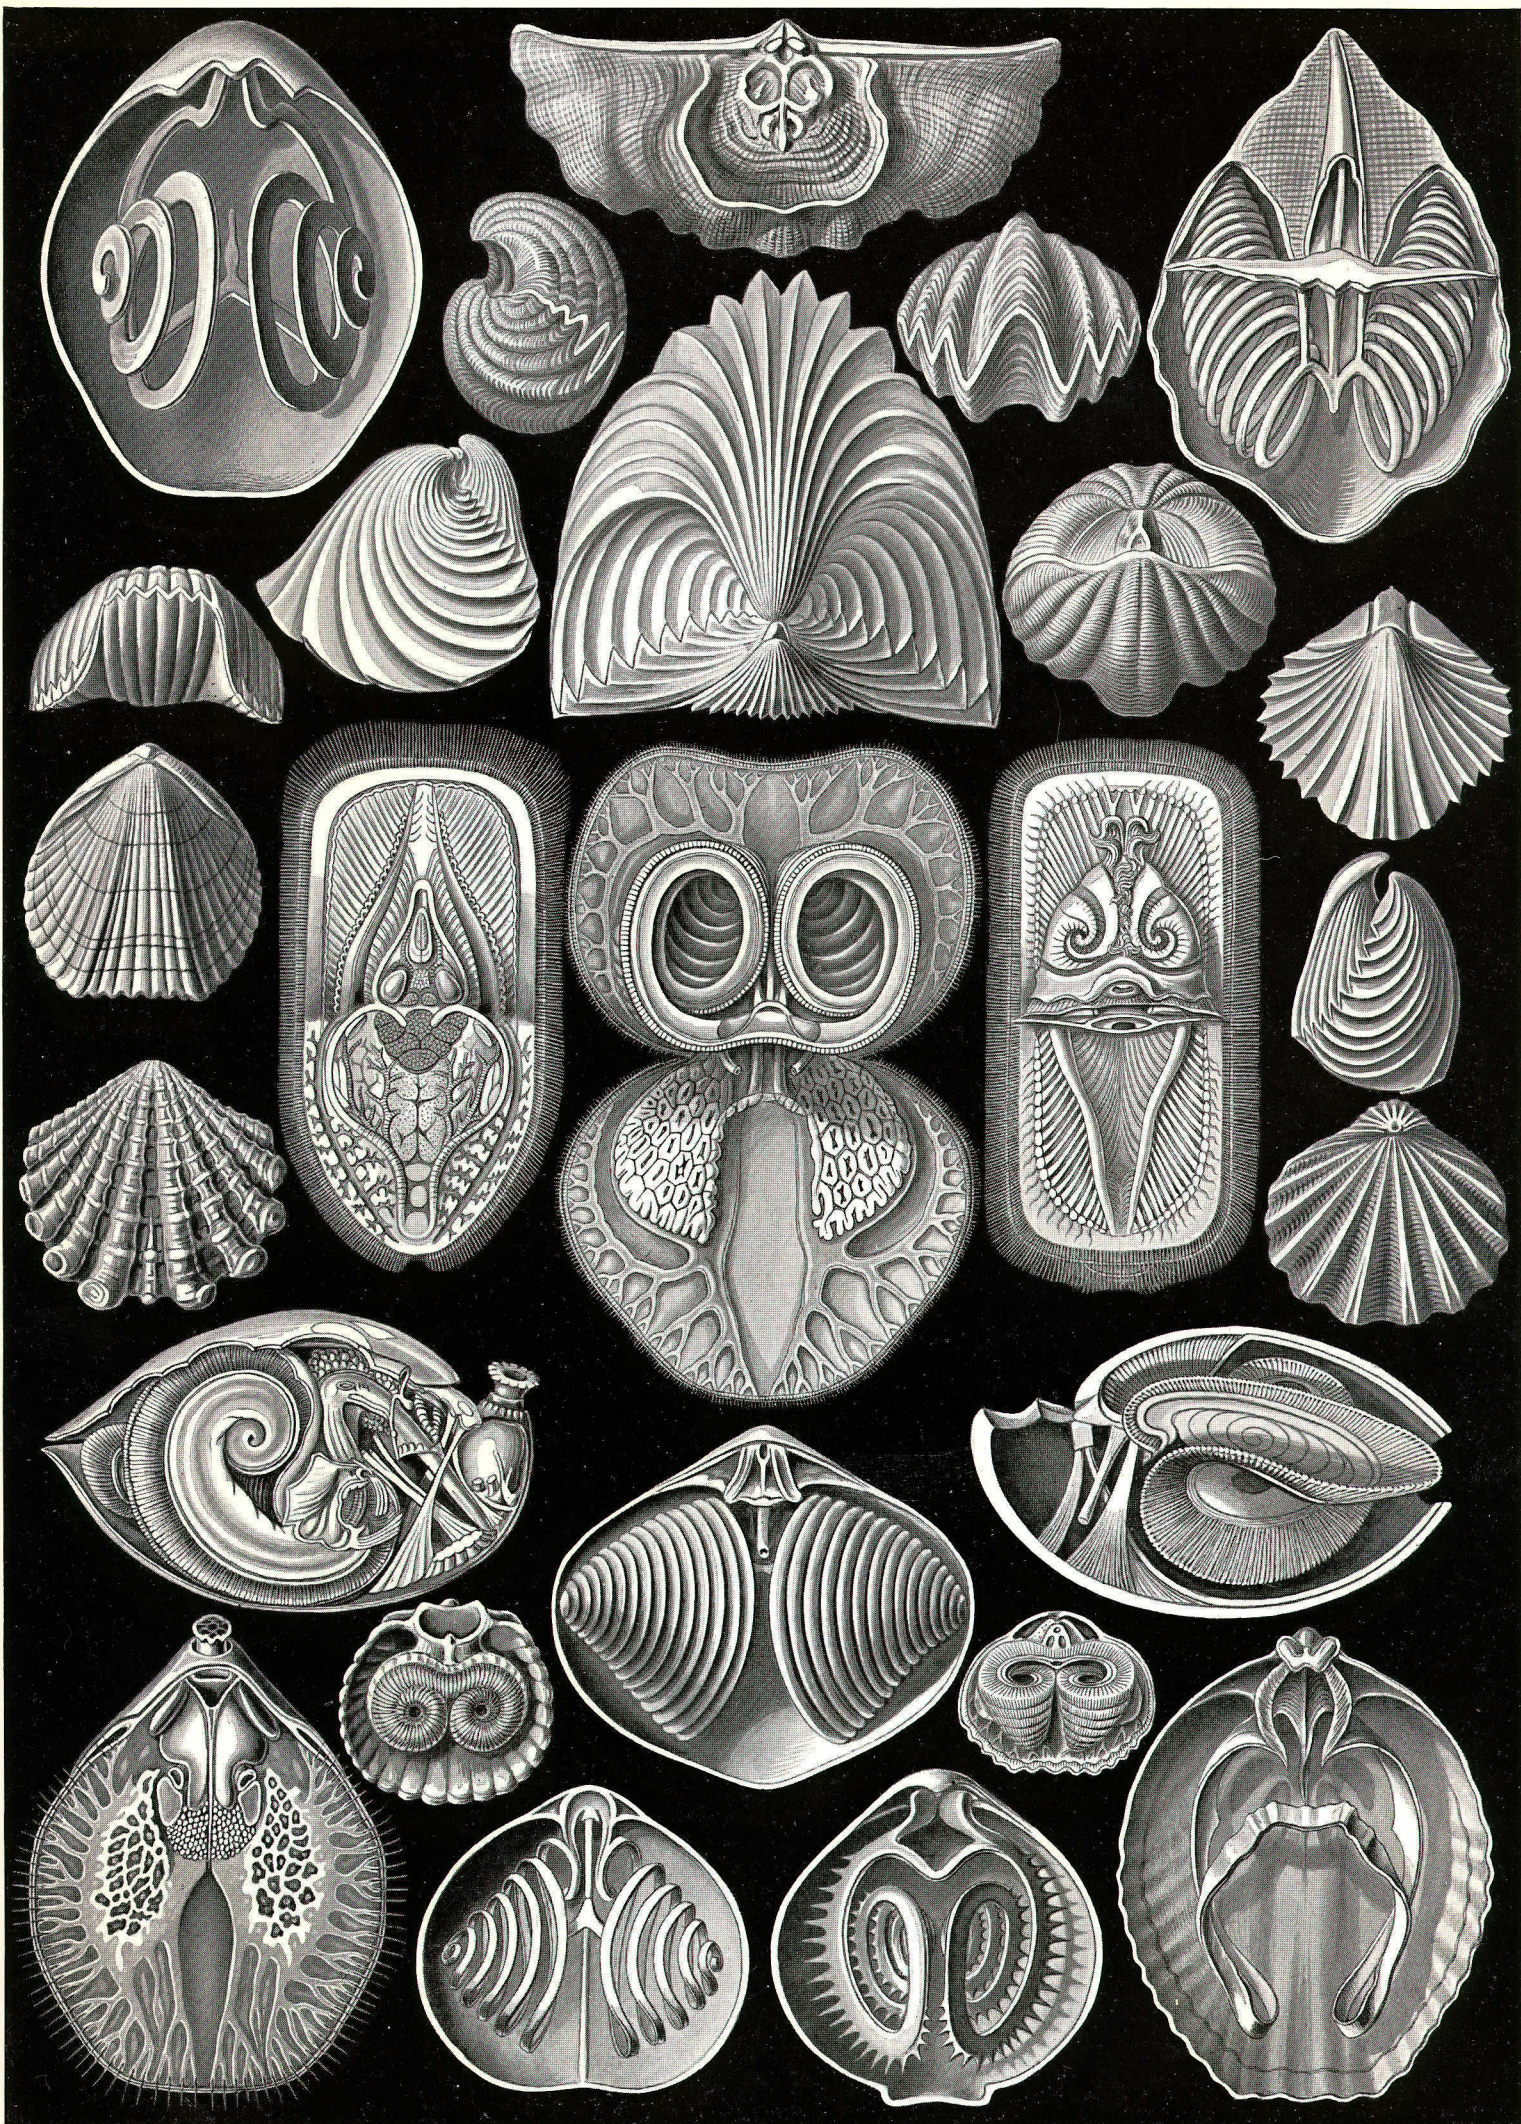

Coniferae. — Zapfenbäume.

Amphoridea. — Urnensterne.

6
Chaetopoda. — Borstenwürmer.

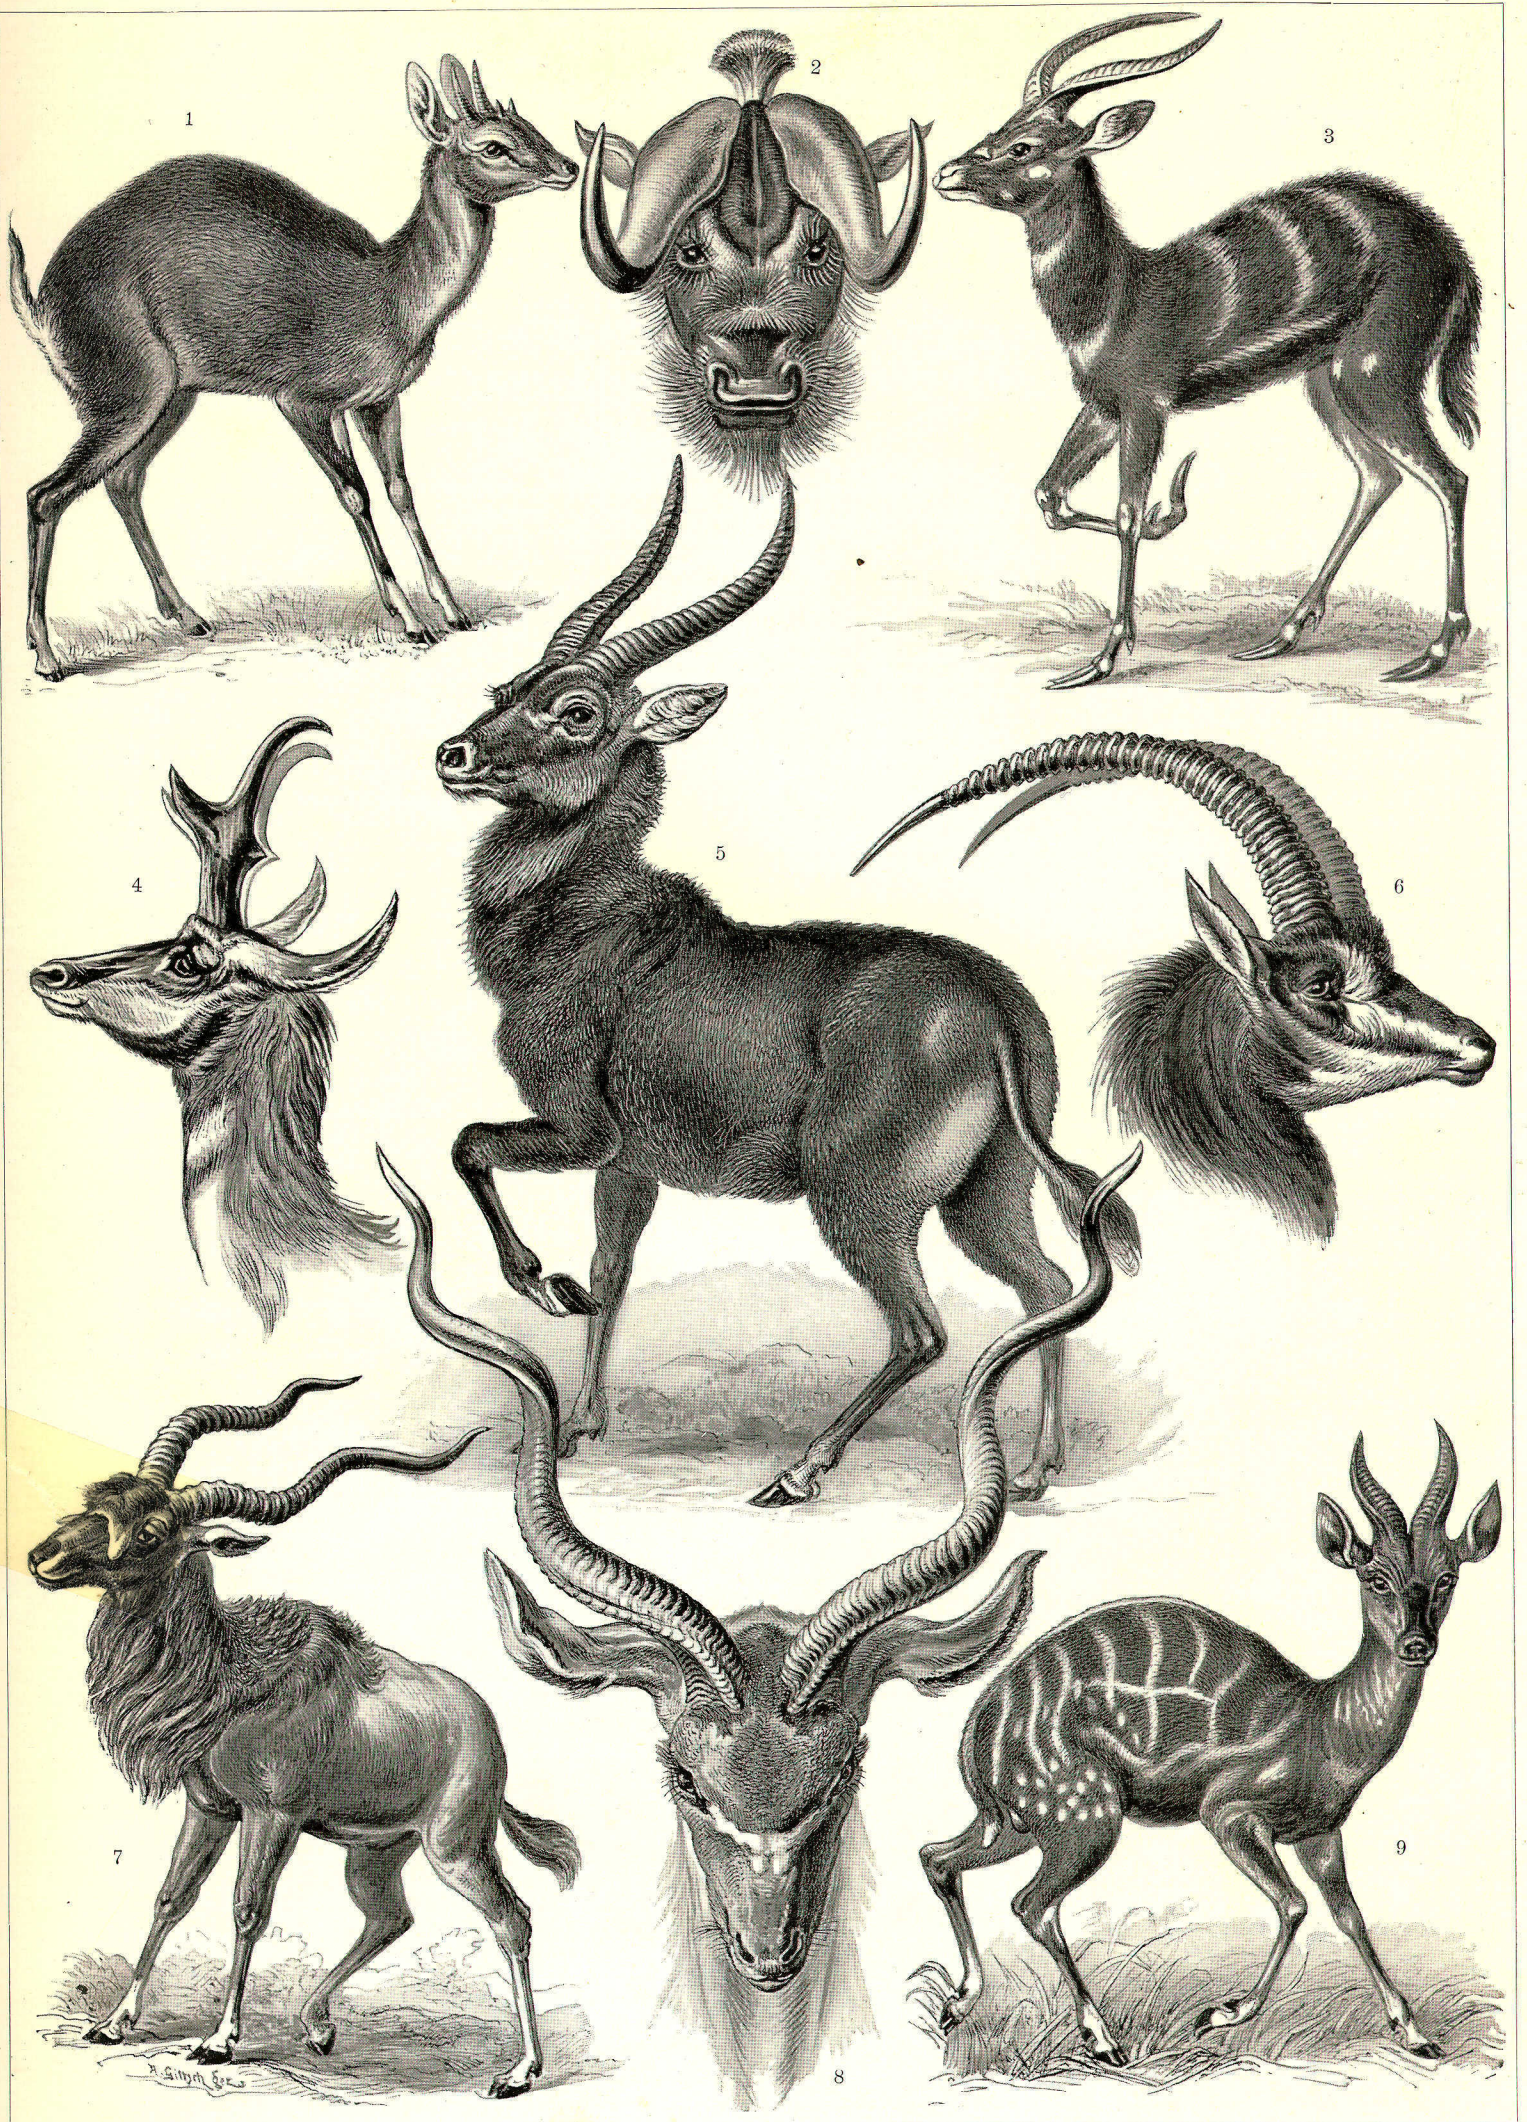

Spirobranchia. — Spiralkiemer.

Trochilidae. — Kolibris.

Antilopina. — Antilopen.
